

BECKHOFF New Automation Technology

Our philosophy

Advantage at the very core.
The Beckhoff Industrial PCs.

IPCs for any application:
from automation
to infrastructure.

Selecting an Industrial PC (IPC) from Beckhoff opens the door to a superior hardware solution that perfectly meets the requirements of any application. Whether for industrial or building automation, power generation or infrastructure, HMI or IoT applications, as the central platform in a complete Beckhoff control solution or just an IPC – all Beckhoff IPCs come with a built-in competitive edge. They are backed by a unique technological philosophy and superior in-house production processes.

All kinds
of IPCs.
But all of the
Beckhoff kind.

As a pioneer in industrial automation, Beckhoff offers a highly scalable portfolio of IPCs for any kind of installation format and protection class requirement. They have one thing in common – the Beckhoff look and feel. Starting with our selection of materials our engineers ensure that superior technological standards are reflected in the attractive design, high-quality build and surface finish of every product. The end result is a consistent, state-of-the-art user experience.

Control cabinet IPCs

These IPCs from Beckhoff are designed for installation in control cabinets and enclosures. An IPC and a Beckhoff Control Panel are an ideal combination and provide a versatile platform for machine and factory applications, especially with TwinCAT automation software.

Embedded PCs

The compact, DIN rail-mountable PCs from the CX series can be combined with a wide range of I/O modules to implement space-saving industrial control systems in control cabinets. Embedded PCs from Beckhoff are completely scalable according to your budget, performance requirements and control task complexity.

Panel PCs

Beckhoff Panel PCs are equipped with powerful processors ranging from ARM Cortex™ to Intel® Atom™ up to Intel® Core™ i7. For each application, we offer a matching Panel PC in a wide range of screen sizes based on your available space and performance requirements.

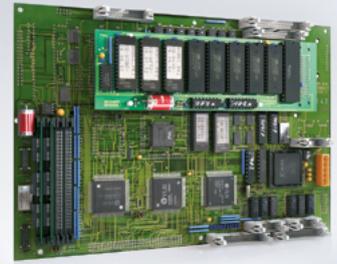

Control Panels

Beckhoff Control Panels are designed for installation in cabinets or on mounting arms. They feature up to IP 65 protection class and can be operated at distances up to 100 meters away from the PC. Available in many screen sizes as well as 4:3, 5:4 and 16:9 aspect ratios, Beckhoff Control Panels offer the ideal industrial display for any application.

More than
30 years
of expertise:
built into
every IPC.

More than 30 years ago, Beckhoff developed the principle to use PC-based control technology for automated processes. The knowledge and expertise needed to design and build a great variety of Industrial PCs in-house has grown steadily ever since. Because of this and the close relationships between Beckhoff and global IT innovators such as Microsoft and Intel, users of Beckhoff IPCs will always enjoy a technological advantage.

Milestone: First all-in-one
PC motherboard

1990

First PC-based
machine controller

1986

Milestone: First Control Panel operation separate from the IPC

1998

Milestone: First modular Embedded PC for DIN rail mounting

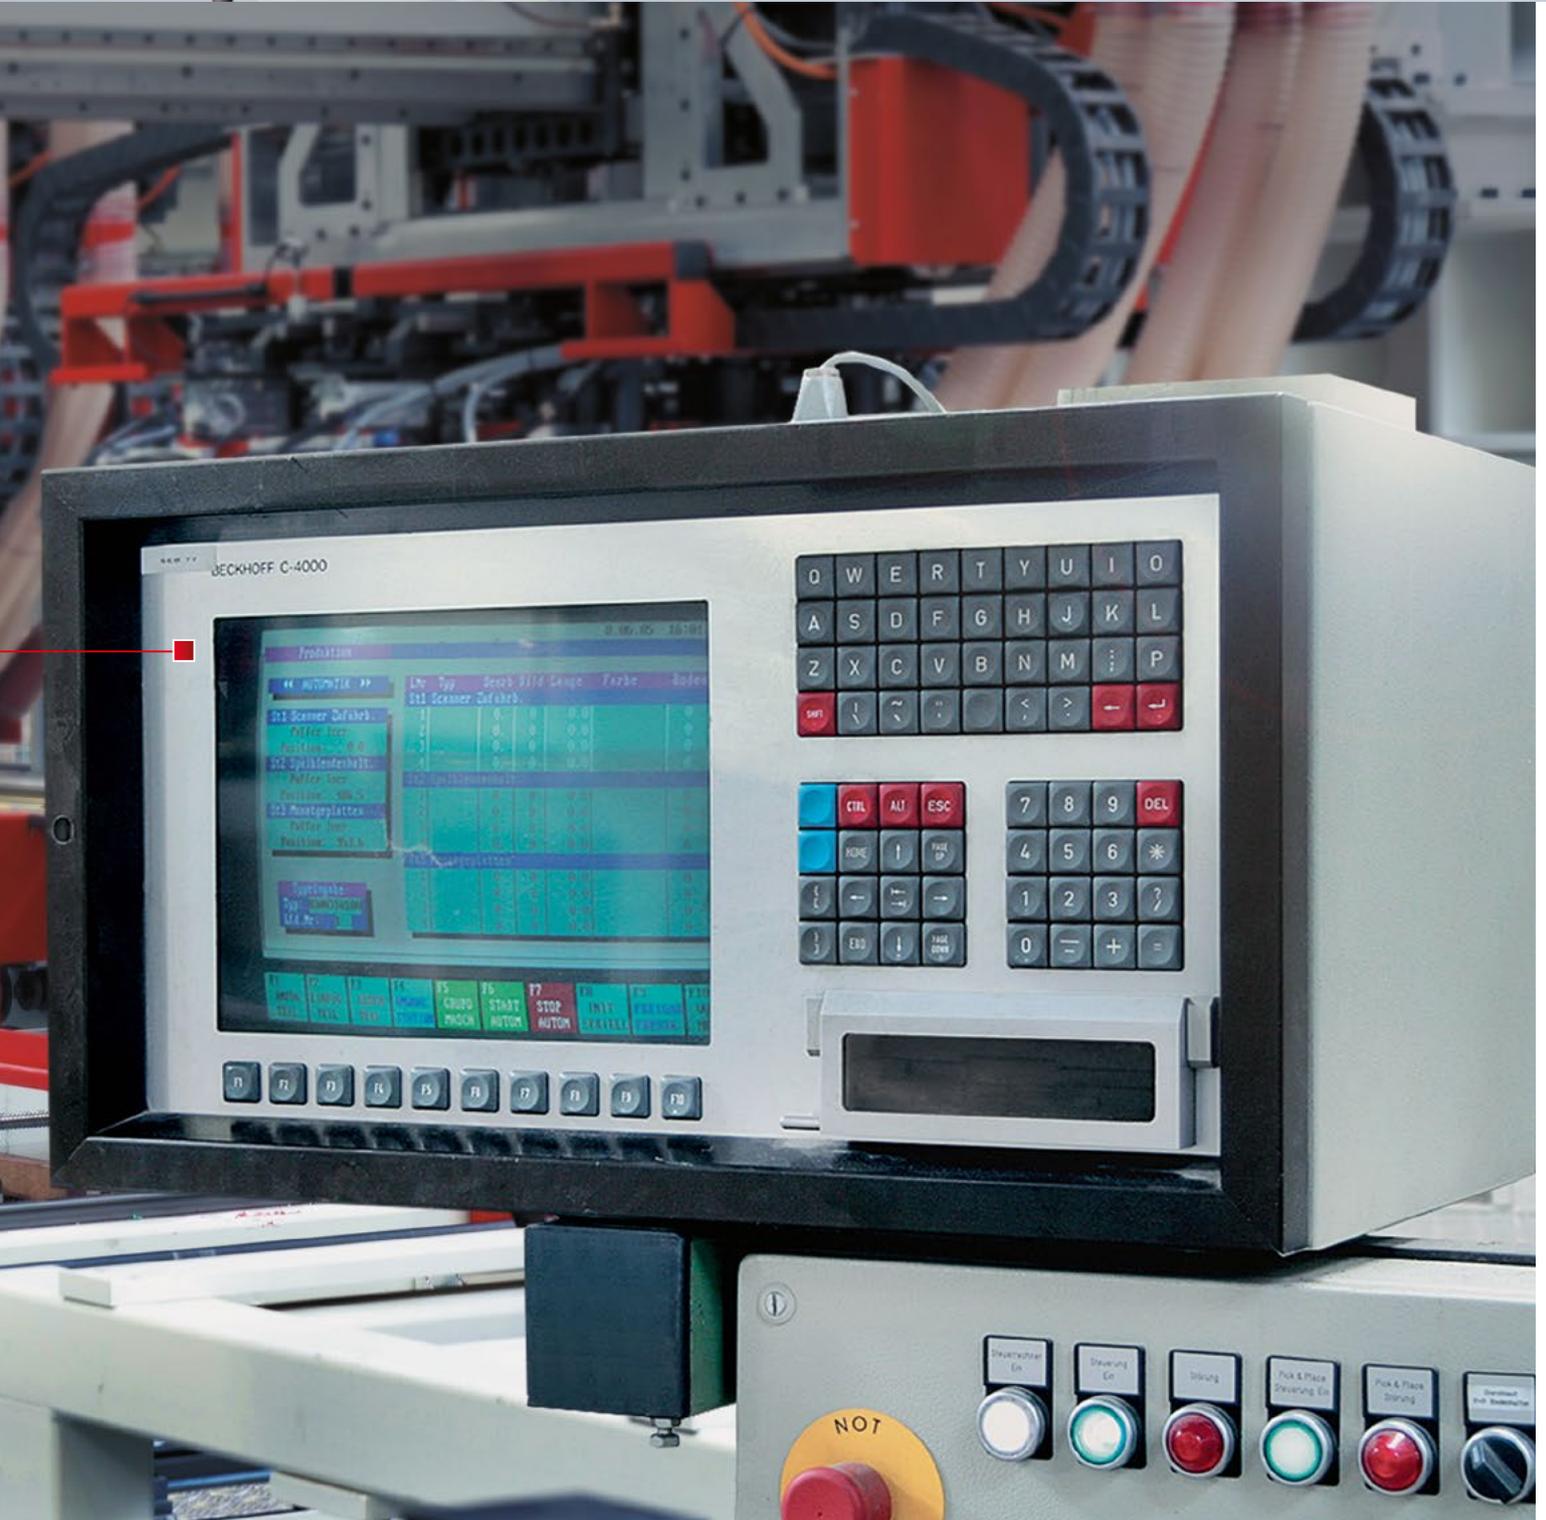

2002

Milestone: Industrial server for many-core control

Our hardware,
our software,
premium design:

Only the combination
makes an IPC
a Beckhoff IPC.

- In-house development, design and production of motherboards, housings and transmission technology
- Highest mechanical and electrical stability
- Highly compact designs
- Hard real-time PC-based control
- Approved with TwinCAT software

- In-house BIOS programming and configuration for various CPUs and chipsets
- Appropriate selection of hardware drivers
- Perfect integration of the EtherCAT protocol
- Perfectly harmonised hardware and software system
- Consistent compatibility across product portfolio

- Premium look and feel
- Unmistakable Beckhoff design
- High-quality materials and appearance

Hardware:
in-house.
Performance testing:
in-house.
Advantage:
in-house.

How do you achieve best-in-class mechanical and electronic stability for highly available and powerful IPC technology? The keys are to develop, design and manufacture in-house. At Beckhoff, this seamless chain of integrated processes begins with the in-house production of motherboards. It ends with rigorous in-house testing to validate the performance of the hardware in interaction with TwinCAT control software. As a user, you can count on long-term product availability and a complete system that is optimally coordinated.

Shock- and vibration-proof

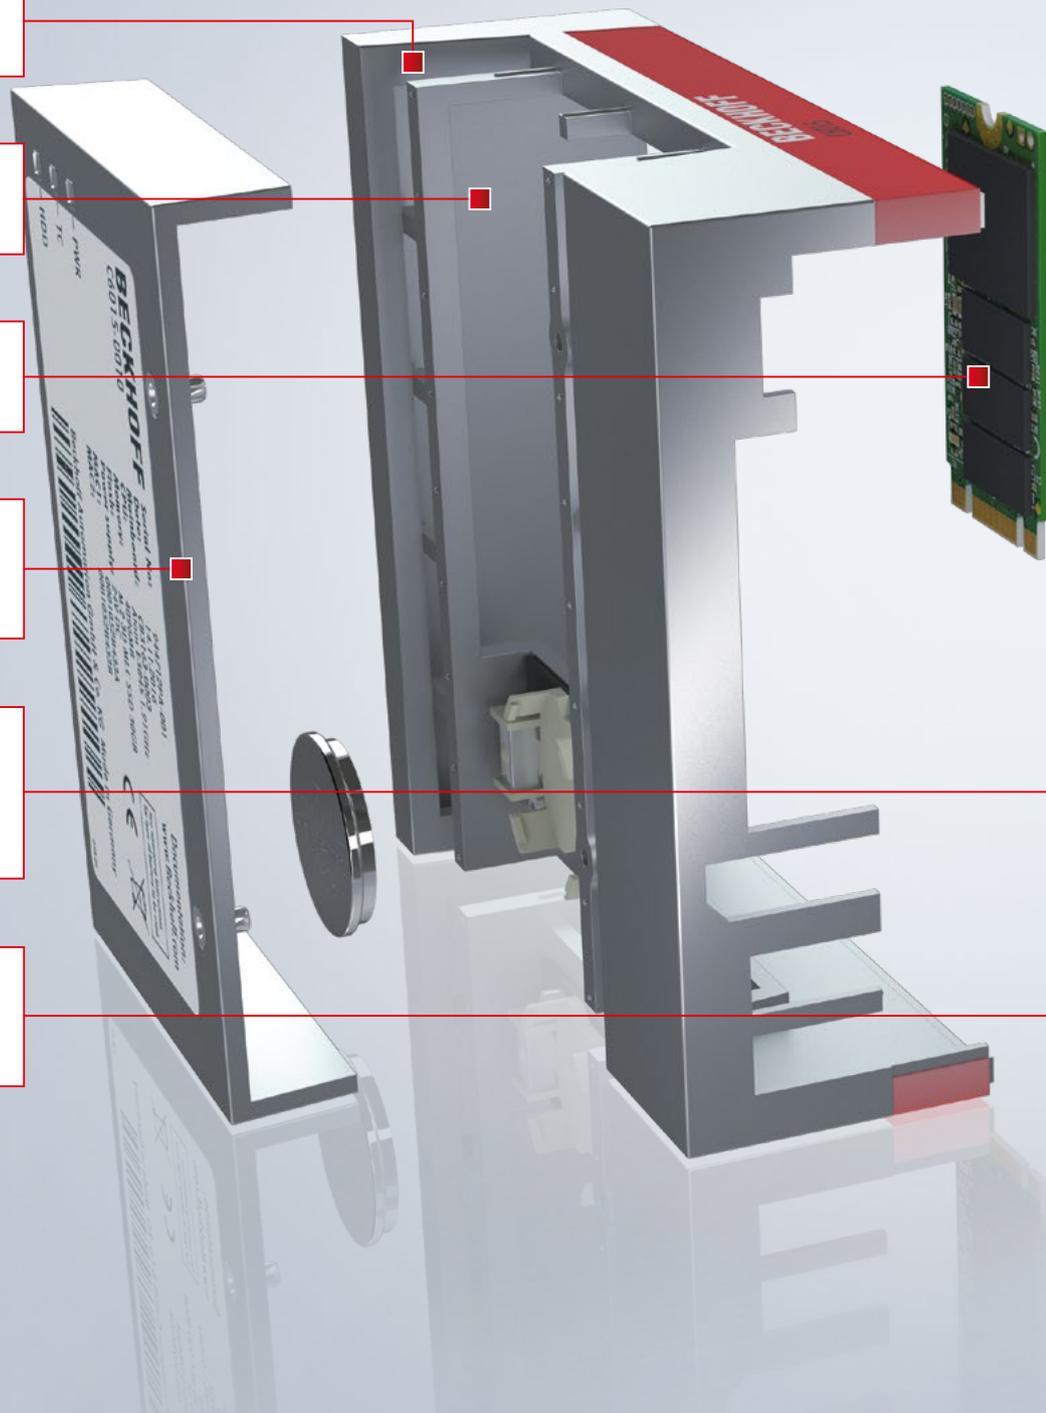

International approvals

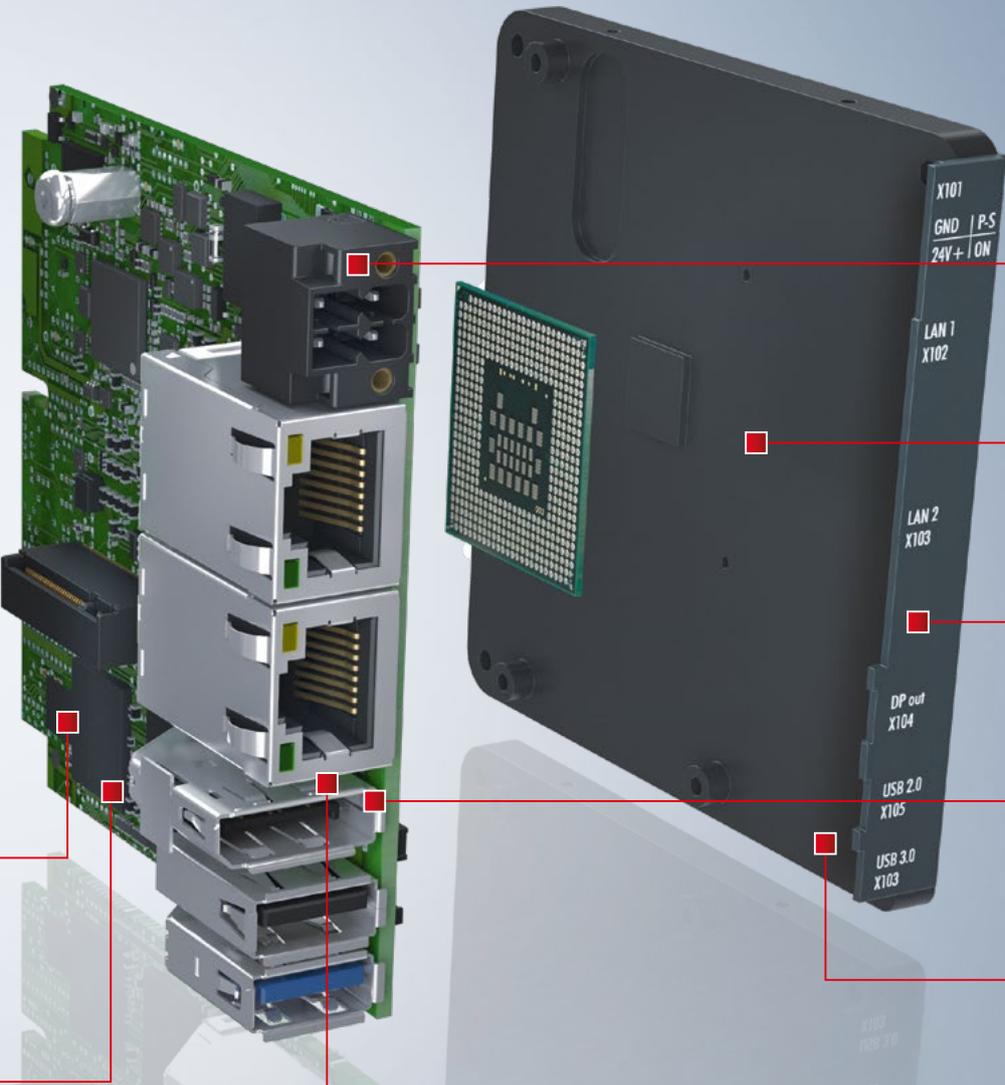

Exchangeable storage media
▪ scalable configuration

Convenient component accessibility
▪ very maintenance-friendly

100 % in-house motherboard development – Designed in Germany
▪ system from a single source

100 % in-house motherboard production – Made in Germany
▪ end-to-end traceability

Flexible installation options

Flexible form factors
▪ optimised for any application

Industrial temperature ranges

Passive cooling concepts
▪ maintenance-free operation

Long-term available components
▪ highest investment security

EMC-optimised design

Robust ports and connections

Beckhoff BIOS and diagnostics: the best software for the Beckhoff hardware.

High performance hardware needs capable software to match. With the company's own BIOS development, Beckhoff can offer fully customised software packages. The same applies to our Windows operating system image development and our IPC diagnostics for standardised access to all IPC information. Our in-house software development also ensures the system's real-time capability to perform TwinCAT real-time tests and adapt the IPC software even more precisely to the hardware.

Integrated diagnostics

- minimised downtime

Optional RAID data storage

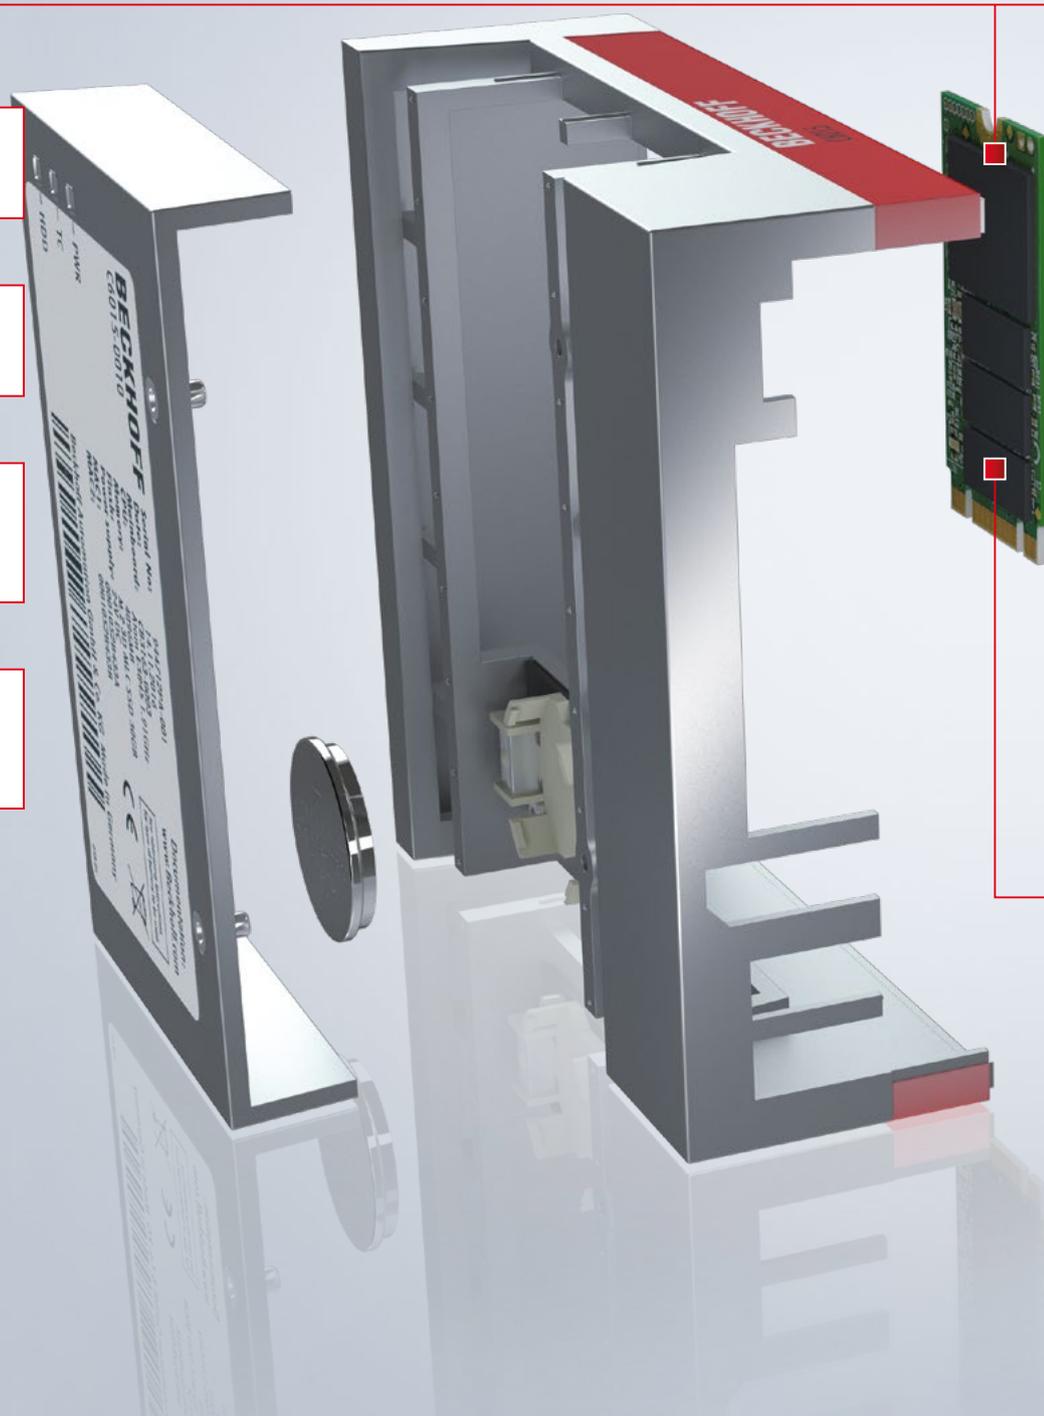

- highest data availability

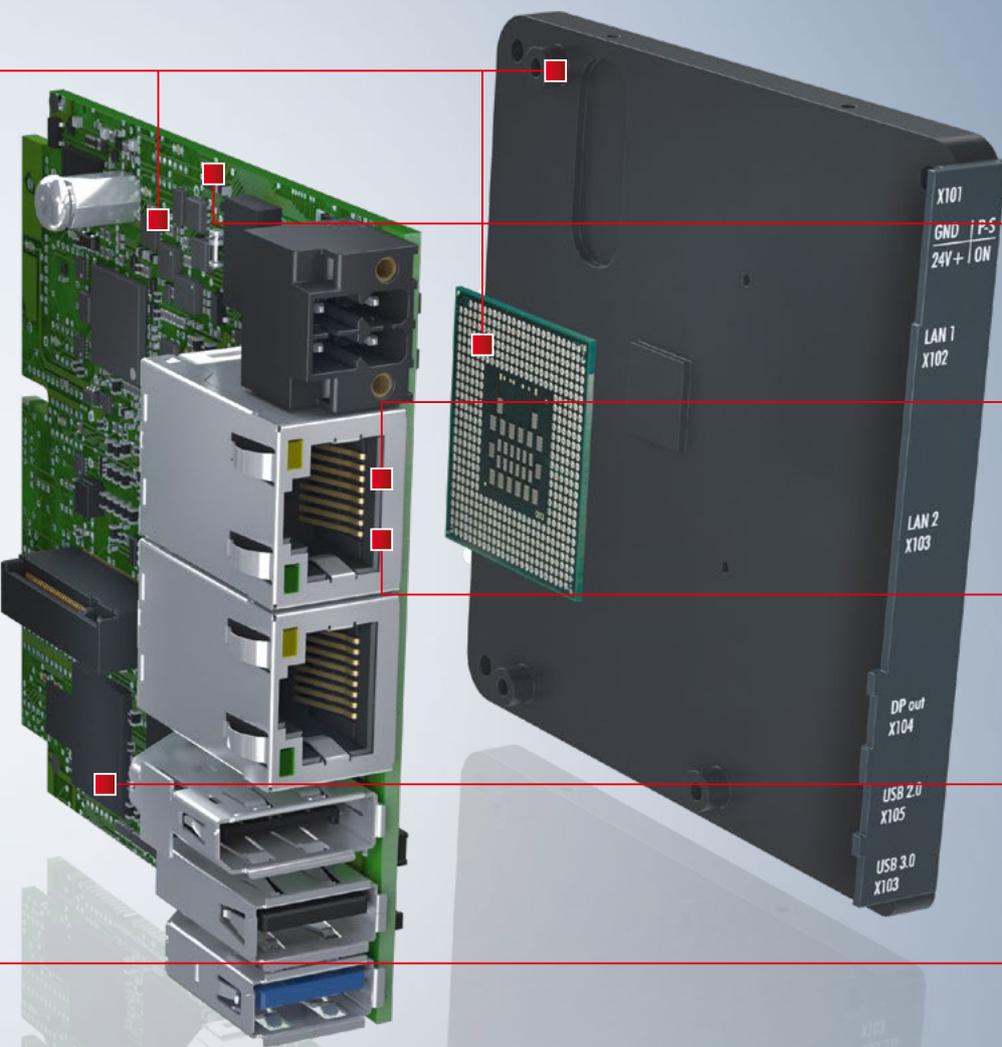

Integrated security

- protection against unauthorised access

Operating systems with long-term availability

- long-term machine concepts

Optimised TwinCAT control software platform

Optional IoT communication
▪ for all applications

EtherCAT-compatible interfaces
▪ real-time capable up to cycle times of 12.5 μ s

Beckhoff BIOS
▪ optimised system stability

In-house image creation
▪ customer-specific adaptations

Superior
technology at
first sight.
Premium
look and feel.

The unmistakable design and high-quality finish of Beckhoff IPCs are fixed parameters of product development from the start. The housings of our Control Panels are prime examples, which are milled from a solid block of aluminium. We manufacture the housings this way because we want our premium design philosophy to be apparent and tangible for the end customer while at the same time enhancing the value of machines and systems. In many cases, Panel PCs or Control Panels serve as front-ends with high recognition value.

reddot design award

CX2020

Revolution on DIN rail: The powerful CX2020 combines high computing performance in a compact design with direct connection to the I/O system.

Control Panels in special stainless steel housings are used in the most demanding environments, such as the food, beverage and pharmaceutical industries.

reddot design award

Multi-touch panels on mounting arms

Arm-mounted sophistication: The fully IP 65-compliant Control Panels in robust anodized aluminium housings with tempered-glass fronts can be used for many applications.

C6015

Flexibility redefined: With exceptional space and cost savings, the ultra-compact C6015 IPC is the ideal solution for a multitude of control applications.

CX8190

Functionality meets high-end design: The CX81xx Embedded PC series in Bus Coupler format delivers impressive computing performance in an ultra-compact controller using TwinCAT 3 software.

Highly scalable
and customisable:

Only the combination
ensures a perfect fit
for your application.

- Flexible form factors
- Scalable CPU architectures: ARM, x86
- Storage media flexibility: HDD, SSD, CFast, μ SD
- Wide range of interfaces and screen sizes
- For all protection classes and installation requirements
- Customised models in terms of mechanics, electrical and electronic components, software and design
- Integration of external hardware
- Integration of industry-specific functionalities
- Tailored to specific applications and corporate design guidelines

As broad as the application spectrum itself: the IPC portfolio

Performance

ARM Cortex™-A9,
800 MHz

ARM Cortex™-A8,
1 GHz

Intel® Atom™ E3815,
1.46 GHz

Select the Beckhoff IPC that perfectly matches the job. Beckhoff offers a highly scalable portfolio of IPCs ranging from single-core to multi-core and many-core with all types of interfaces, display sizes, form factors with different or identical CPUs, and various protection classes. Another key benefit is guaranteed long-term availability throughout the product portfolio – a total of five years for Industrial PCs and 10 years for Embedded PCs. End customers enjoy peace of mind knowing that their products will be supported in the long term: through hardware updates with easy CPU integration in the same form factor, reduced cost of software images and training, as well as fast customer service response times.

Great variety
from the start:
standard IPCs
with variable
configuration.

Almost no applications are exactly alike, and neither are most of the standard IPCs from Beckhoff. Their flexibility in configuration allows users to choose exactly the devices that are best-suited to their specific applications. With processors ranging from Intel® Celeron® to Core™ i7, different RAM and storage options, various operating systems and TwinCAT generations – the menu of options is vast, resulting in an almost unlimited variety of standard IPC models.

As desired:
customer-specific
features
and designs.

Your
labels.

Your
configuration.

Your
features.

Your
Corporate
Design.

Besides the high scalability of the Beckhoff IPC portfolio and the ability to configure standard IPCs individually, Beckhoff IPCs can be designed and built for customer-specific requirements. The spectrum of options is exceptionally broad and ranges from company logos or special labels and individualised functions to IPCs built in total accordance with the customer's corporate design.

Globally available
for decades:

Only the combination
ensures optimum
investment protection.

- Long-term availability of standard form factors
- Long-term stocking of processors and chips
- Complete support for the product lifecycle
- Long-term availability of all IPC series in the portfolio

- Long-term strategic stocking of components to ensure supply availability

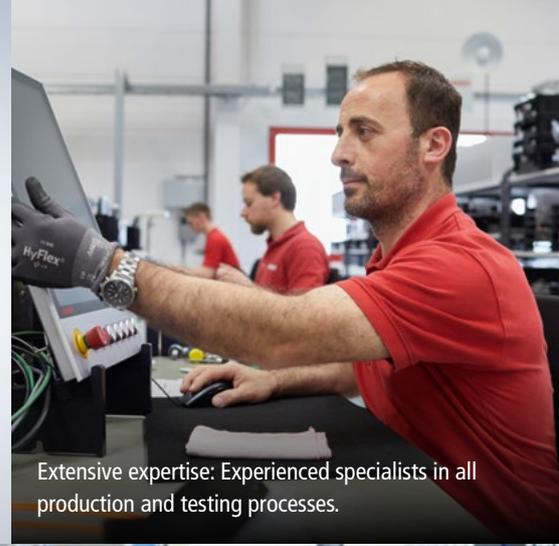

- Availability in more than 70 countries
- Globally available service

State-of-the-art
manufacturing
standards and
superior stock
management.

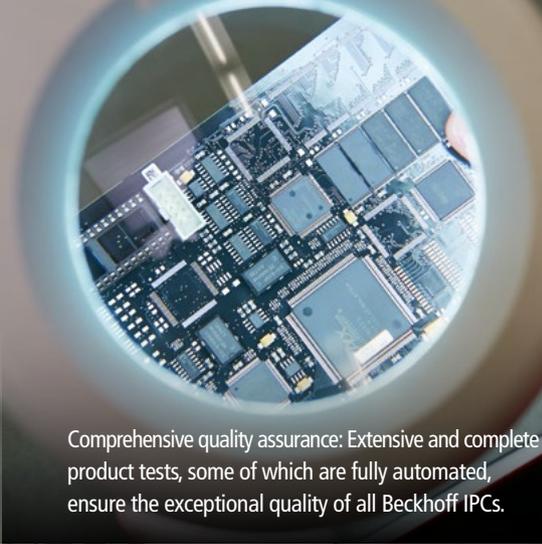

Each Beckhoff IPC comes with maximum delivery reliability and investment protection. Besides featuring form factors and model series with long-term availability, Beckhoff virtually eliminates supply bottlenecks through superior inventory and stock management. By keeping up to six months' worth of raw materials and components in stock, Beckhoff can deliver even when global market conditions become challenging.

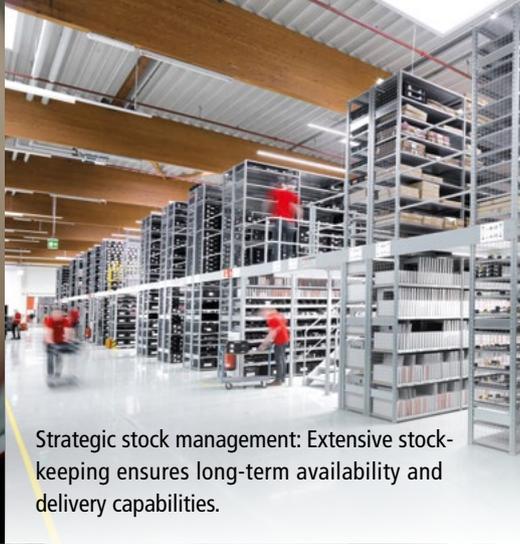

Extensive expertise: Experienced specialists in all production and testing processes.

High level of vertical integration: With fully automated electronics manufacturing systems, Beckhoff ensures highest quality over the entire lifecycle of each product.

Comprehensive quality assurance: Extensive and complete product tests, some of which are fully automated, ensure the exceptional quality of all Beckhoff IPCs.

Strategic stock management: Extensive stock-keeping ensures long-term availability and delivery capabilities.

Flexible assembly concept: Strategic capacity and production planning for reliable delivery performance of lot sizes as small as one.

Globally available: Industrial PCs from Beckhoff.

Beckhoff – New Automation Technology

Beckhoff implements open automation systems based on PC Control technology for more than 35 years. The product range covers Industrial PCs, I/O and Fieldbus Components, Drive Technology and automation software. For all areas of application, product series are available that can be used as separate components or integrated into a complete and seamless control system. The Beckhoff “New Automation Technology” philosophy represents innovative control and automation solutions that are used worldwide in a wide variety of different applications and industries, ranging from CNC-controlled

machine tools and wind turbines to intelligent building automation.

Worldwide presence on all continents

The worldwide presence of Beckhoff in more than 75 countries ensures fast service and support for globally operating customers in their local language. Moreover, geographical proximity helps us develop an in-depth understanding of the technical challenges our customers are faced with around the world.

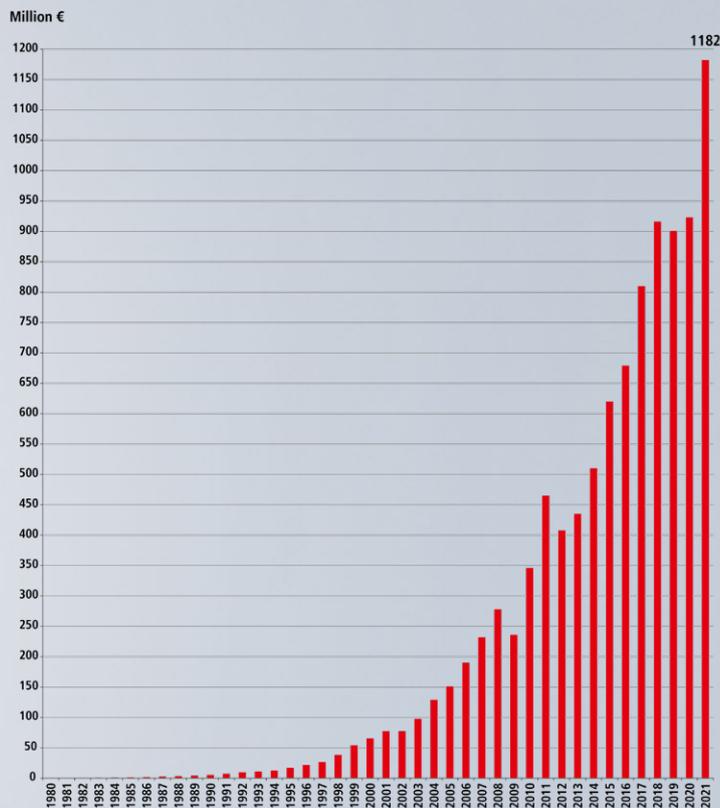

Owner-led management and a strong team spirit provide the foundation for continuous innovation.
