**Material declaration according to EN IEC62474**

Dear Customer,

Beckhoff Automation as a manufacturer of automation technologies. Our products consist of many components which we buy from a complex global supply chain.

Beckhoff Automation access its products and suppliers based on confirmation of legal requirements. Our supplier declaration and/or contractual agreement confirms that the concentrations of defined substances in the material, component or assembly do not exceed the permissible maximum values.

Due to the complexity of our products and the complexity of the supply chain we do not receive a full material declaration. We therefore refer to the observance of threshold limits and refer to the International Electrotechnical Commission Standard IEC 62474 "[IEC 62474 - Material Declaration for Products of and for the Electrotechnical Industry](#)". This standard includes a harmonized database of declarable substances for the electronic industry. Substances on this list are prohibited or restricted in existing national laws or have a reporting or labelling requirement. The observed regulations and laws are relevant for electrical and electronic equipment. The IEC 62474 database is updated regularly.

The confirmation of compliance with the RoHS-Directive 2011/65/EU is part of the respective EU Declaration of Conformity, which we provide on our website linked to the product and in the [download](#) area.

We update our information regularly. You will find all compliance declarations on our website: [Search result | Beckhoff Worldwide](#)

Product specific information on SVHCs and RoHS exemptions are given in the Excel sheet "*SVHC, SCIP and applicable RoHS exemptions for Beckhoff Automation Products*" which is available on our [website](#).

Please contact us in case of further questions. Please understand that due to the high number of customer inquiries, we cannot process them individually.

Best regards

Dr. Hatice Söyler
