1 Notes on the documentation

This description is only intended for the use of trained specialists in control and automation engineering who are familiar with the applicable national standards. It is essential that the documentation and the following notes and explanations are followed when installing and commissioning the components. It is the duty of the technical personnel to use the documentation published at the respective time of each installation and commissioning.

The responsible staff must ensure that the application or use of the products described satisfy all the requirements for safety, including all the relevant laws, regulations, guidelines and standards.

Disclaimer

The documentation has been prepared with care. The products described are, however, constantly under development. We reserve the right to revise and change the documentation at any time and without prior announcement. No claims for the modification of products that have already been supplied may be made on the basis of the data, diagrams and descriptions in this documentation.

Trademarks

Beckhoff®, TwinCAT®, EtherCAT®, EtherCAT G®, EtherCAT G10®, EtherCAT P®, Safety over EtherCAT®, TwinSAFE®, XFC®, und XTS® und XPlanar®, are registered trademarks of and licensed by Beckhoff Automation GmbH. Other designations used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owners.

Patent Pending

The EtherCAT Technology is covered, including but not limited to the following patent applications and patents:

EtherCAT® is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.

Copyright

© Beckhoff Automation GmbH & Co. KG, Germany. The reproduction, distribution and utilization of this document as well as the communication of its contents to others without express authorization are prohibited. Offenders will be held liable for the payment of damages. All rights reserved in the event of the grant of a patent, utility model or design.
1.1 Representation and structure of warnings

The following warnings are used in the documentation. Read and follow the warnings.

Warnings relating to personal injury:

<table>
<thead>
<tr>
<th>Warning Level</th>
<th>Hazard Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DANGER</strong></td>
<td>Serious risk of injury</td>
</tr>
<tr>
<td></td>
<td>Hazard with high risk of death or serious injury.</td>
</tr>
<tr>
<td><strong>WARNING</strong></td>
<td>Risk of injury</td>
</tr>
<tr>
<td></td>
<td>Hazard with medium risk of death or serious injury.</td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Slight risk of injury</td>
</tr>
<tr>
<td></td>
<td>There is a low-risk hazard that can result in minor injury.</td>
</tr>
</tbody>
</table>

Warnings relating to damage to property or the environment:

<table>
<thead>
<tr>
<th><strong>NOTE</strong></th>
<th>Damage to the environment or devices</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>There is a potential hazard to the environment and equipment.</td>
</tr>
</tbody>
</table>

Notes showing further information or tips:

- Tip or pointer
  - This notice provides important information that will be of assistance in dealing with the product or software. There is no immediate danger to product, people or environment.
### 1.2 Documentation issue status

<table>
<thead>
<tr>
<th>Version</th>
<th>Modifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0</td>
<td>First version</td>
</tr>
<tr>
<td>1.1</td>
<td>Chapter Configuration revised</td>
</tr>
</tbody>
</table>
2 For your safety

Read the chapter on safety and follow the instructions in order to protect from personal injury and damage to equipment.

Limitation of liability

All the components are supplied in particular hardware and software configurations appropriate for the application. Unauthorized modifications and changes to the hardware or software configuration, which go beyond the documented options, are prohibited and nullify the liability of Beckhoff Automation GmbH & Co. KG.

In addition, the following actions are excluded from the liability of Beckhoff Automation GmbH & Co. KG:

- Failure to comply with this documentation.
- Improper use.
- Use of untrained personnel.
- Use of unauthorized replacement parts.

2.1 Intended use

With the CU8210-D001-0102 WLAN stick, Beckhoff Industrial PCs can be equipped with a WLAN module and subsequently connected to a network.

The WLAN stick was developed for a work environment that conforms to protection class IP20. This involves finger protection and protection against solid foreign objects up to 12.5 mm, but not protection against water. Operation of the devices in wet and dusty environments is not permitted, unless specified otherwise. The specified limits for electrical and technical data must be adhered to.

The WLAN stick is used:

- to equip Industrial PCs with a network connection without a comprehensive cable-based infrastructure, or
- to reach difficult to access machine or plants more easily.

Improper use

The WLAN stick is not suitable for operation in the following areas:

- areas in which the use of radio devices is prohibited.
- Potentially explosive atmospheres.
- Areas with an aggressive environment, e.g. aggressive gases or chemicals.
- applications that require real-time communication via radio.

2.2 Staff qualification

All operations involving Beckhoff software and hardware may only be carried out by qualified personnel with knowledge of control and automation engineering. The qualified personnel must have knowledge of the administration of the Industrial PC and the associated network.

All interventions must be carried out with knowledge of control programming, and the qualified personnel must be familiar with the current standards and guidelines for the automation environment.
2.3 Safety instructions

The following safety instructions must be followed during installation and working with networks and the software.

WLAN
- The WLAN stick can be impaired in the vicinity of metal constructions or plants that emit electromagnetic waves. Plan the distances and use the WLAN stick in such a way that the connection between the WLAN stick and the WLAN is as unobstructed as possible.
- Do not allow any dust, liquids or vapors that could damage the WLAN stick to get inside it. Use the WLAN stick together with the CU8210-M001-01x0 cabinet dome in order to protect it against environmental influences.
- Encrypt the WLAN with the WPA2 security mechanism.

Working with networks
- Restrict access to all devices to an authorized circle of persons.
- Change the default passwords to reduce the risk of unauthorized access. Regularly change the passwords.
- Protect the devices with a firewall.
- Apply the IT security precautions according to IEC 62443, in order to limit access to and control of devices and networks.

Working with the software
- Use up-to-date security software. The safe function of the PC can be compromised by malicious software such as viruses or Trojans.
- The sensitivity of a PC against malicious software increases with the number of installed and active software.
- Uninstall or disable unnecessary software.

Further information about the safe handling of networks and software can be found in the Beckhoff Information System:
http://infosys.beckhoff.de

<table>

</tbody>
</table>
3  Product overview

With the CU8210-D001-0102 WLAN stick, Beckhoff Industrial PCs can be equipped with a WLAN module and operated in client mode or as an access point, depending on the operating system.

The WLAN stick offers the encrypted exchange of data at a transfer rate of up to 433.3 Mbit/s and supports 20 MHz, 40 MHz and 80 MHz transmission bandwidths. The WLAN stick supports the IEEE 802.11 ac Draft 2.0 and 802.11 a/b/g/n specifications. The WLAN stick is downwardly compatible and enables communication with older devices.

In addition, the WLAN stick supports the WiFi-Direct standard. A connection can thus be established between two WLAN end devices without a central access point.

3.1  Structure

![Diagram of CU8210-D001-0102 WLAN stick]

Fig. 1: Structure of a CU8210-D001-0102 WLAN stick.

Table 1: Legend for the configuration.

<table>
<thead>
<tr>
<th>No.</th>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Diagnostic LED</td>
<td>The LED is located below the plastic. The diagnostic LED indicates the status of the WLAN stick and, for example, whether the WLAN stick is switched on or is connected to a network.</td>
</tr>
<tr>
<td>2</td>
<td>Name plate</td>
<td>The name plate can be used for the identification of the model. The MAC address can be found here.</td>
</tr>
</tbody>
</table>
3.2 Name plate

The WLAN sticks are available in two versions, which differ only in the type of certification. Depending on the certification, the sticks can be used in certain regions or countries.

The name plate makes it easier to find a stick with the appropriate certification for a region or country. The name plate is located on the housing of the WLAN stick:

- The marking LM808-0406 corresponds to the CU8210-D001-0101 WLAN stick, which is suitable for operation in North America.
- The marking LM808-0407 corresponds to the CU8210-D001-0102 WLAN stick, which is suitable for operation in Europe, Russia, South Africa, Korea, Israel, Taiwan, Australia, New Zealand, China, Japan.

Fig. 2: CU8210-D001-0102 name plate.

In addition, the MAC address of the WLAN stick is shown on the name plate and a list of certificates on the USB plug.

3.3 System requirements

<td>TwinCAT/BSD v.12.1</td>
</tr>
</tbody>
</table>
3.4 WLAN principles

WLAN (Wireless Local Area Network) is a radio technology that makes wireless networks and wireless internet access possible. WLAN, which is defined by the IEEE 802.11 standards family, can be configured in the following mode:

Infrastructure network

The main difference between wireless infrastructure networks and wireless ad hoc networks is that the PCs in a wireless infrastructure network can access the Internet via an access point.

Fig. 3: Example of an infrastructure network.

Pay attention to security when setting up an infrastructure network, because a connection to the internet is a potential vulnerable point in the network infrastructure.

Encryption

WLAN encryption is an important security setting and you must ensure that no unauthorized user can log on and use the network resources. The WLAN stick supports the WPA2 (Wi-Fi Protected Access) security mechanism,

where a key that is used to encrypt the data is defined in the access point or router. This key must be entered in the clients’ settings and must match the defined key.

Encryption with WEP is obsolete and can be decrypted in a short time.

Frequency range

If several WLANs are operated within a small radius, mutual interference can occur because both WLANs work in the same frequency range or the distance between the channels is too small.

Only the transmission speed is affected by this; disconnections or data loss cannot occur due to frequency sharing.

If there are persistent disturbances, select a different channel to prevent frequency sharing.
4 Configuration

4.1 Windows 7

The WLAN stick only functions on Windows 7 systems after installing the driver. The configuration software from Realtek, with which the WLAN stick can be configured, is also installed together with the driver.

- The WLAN stick can be configured as an access point with the configuration software from Realtek.
- A WLAN connection can also be established using Windows standard applications.

4.1.1 Installing the driver

The appropriate driver must first be installed in order to use the WLAN on Windows 7. During the installation, the Realtek driver and configuration software will be installed. All other WLAN settings can be made with the software.

Requirements:
- Driver: Provided by Beckhoff Service.

Install the driver as follows:

1. Make sure that the WLAN stick is not yet connected to the Industrial PC.
2. Run the Setup.exe file to start the installation.
3. Follow the further installation instructions.
   ⇒ Restart the Industrial PC after the installation and only then connect the WLAN stick to the Industrial PC. The WLAN stick is now ready to operate.
4.1.2 Connecting to WLAN

In this work step we show you how to establish a WLAN connection. In addition, you will find out how to search for WLANs and determine the SSID. In this example, the IP address is automatically assigned by a DHCP server.

Requirements

- Existing WLAN with configured access point.
- WLAN key (password).

Proceed as follows:

1. Start the Realtek configuration software.

2. Click at the top on the Available Network tab to search for available networks. Networks that are within range are listed with SSID, channel and encryption method.
3. Select the network with which you wish to establish a WLAN connection and click **Add to Profile**. The Wireless Network Properties window appears.

4. Enter the WLAN key of your WLAN and confirm with **[OK]**.

   Following a successful connection, a summary is automatically displayed on the **General** tab, where you will find more information such as the speed, signal strength or IP address of the network.
4.1.3 Establishing a connection to Windows standard applications

In this work step we show you how to establish a WLAN connection to Windows standard applications. In this example, the IP address is automatically assigned by a DHCP server.

Requirements:
- Existing WLAN with configured access point.
- WLAN key (password).

Proceed as follows:
1. Click the network icon at the bottom right in the taskbar to display all WLANs in range.
2. Choose the appropriate network and click Connect.
3. Enter the WLAN key for the network in order to establish the connection.
   ⇨ You have successfully established a WLAN connection. For more information about the network, see Start > Control Panel > Network and Sharing Center.
4.1.4 Configuring as access point

**NOTE**

Unwanted access over the internet
An access point with an internet connection poses a security risk. Take appropriate precautions with your IT department. Adapt your infrastructure, e.g. firewall or VPN.

In this work step we show you how to configure a WLAN stick as a virtual access point, where the access point is based on the Windows 7 hosted network function.

With the Internet Connection Sharing option (ISC), the access point can be configured in such a way that the internet connection of the access point is shared with the clients.

**Proceed as follows:**
1. Start the Realtek configuration software.
2. To activate the access point, select the option **Virtual WiFi allowed** below.
3. In the **IP Address** field, set the address range for IP addresses that are subsequently assigned by the DHCP server to the clients.
   In this example the clients are given the IP addresses: 192.168.159.2... / 3... / 4... and so on.
4. Subsequently, select the option **Start Virtual WiFi Soft AP** to start the access point.

Make sure when assigning addresses that you do not interfere with a higher-level DHCP server from the network infrastructure.
5. Click the **Config** button. The Network Properties window appears.

6. Change the network name if necessary (SSID) and define a WLAN key with at least eight characters for the network.

7. Deactivate the option **Setting Internet Connection Sharing (ISC)** if the internet connection of the access point is not to be shared.

The option **Internet Connection Sharing (ISC)** is active by default.

You have successfully configured the WLAN stick as an access point. Clients that connect to the access point are listed in the **Associated Table**.
4.2 Windows 10

The configuration software from Realtek is not required with Windows 10. The configuration is done using standard Windows tools or with the help of configuration software from Beckhoff if the WLAN stick is to be used as an access point.

4.2.1 Establishing a connection

In this work step we show you how to establish a WLAN connection. In this example, the IP address is automatically assigned by a DHCP server.

Requirements:

- WLAN key (password).

Proceed as follows:

1. Click the network icon at the bottom right in the taskbar to display all WLANs in range.
2. Choose the appropriate network and click Connect.
3. Enter the WLAN key for the network in order to establish the connection.

You have successfully established a WLAN connection. For more information about the network, see Start > Settings > Network & Internet > Wi-Fi.
4.2.2 Configuring as a hotspot

NOTE
Unwanted access over the internet
A hotspot with an internet connection poses a security risk. Take appropriate precautions with your IT department. Adapt your infrastructure, e.g. firewall or VPN.

In this step we show you how to configure a WLAN stick as a hotspot on Windows 10 systems. The hotspot works only with an existing internet connection, which the hotspot then shares with the clients. You cannot activate a hotspot on Windows 10 systems without an internet connection.

Requirements:
- Internet connection

Proceed as follows:
1. Click Start > Settings > Status > Network & Internet. The Settings window appears.
2. Click the Network and Sharing Center button.
3. On the left, click Change adapter settings. Right-click the WLAN adapter, then click Properties.
4. Click the **Configure** button and select the appropriate value for the WLAN mode on the **Advanced** tab. The value depends on your network environment and the desired transfer rate.

5. Click **Mobile hotspot** under **Start > Settings**. Under **Edit**, change the SSID and WLAN key of the network.

6. Activate the hotspot with the button **Share my Internet connection with other devices**. You have successfully activated the hotspot and can now connect clients to this hotspot. All devices are listed under **Devices connected**.
4.2.3 Configuring as access point

The Beckhoff-Virtual-WLAN-Access-Point software must be installed so that the WLAN stick can be configured and used as an access point with Windows 10. The network is managed with the help of the software. Clients such as tablets, cell phones or notebooks can connect to the WLAN provided. In this way, access to the web HMI of the Industrial PC or Condition Monitoring concepts are conceivable.

As the host of the WLAN network, the Industrial PC or the WLAN stick is given the IP address 192.168.137.1. The clients obtain their IP addresses from the integrated DHCP-Server and these addresses cannot be changed due to WiFi-Direct restrictions.

Requirements:
- Beckhoff-Virtual-WLAN-Access-Point: The software is provided by Beckhoff Service.

Proceed as follows:
1. To start the installation, run the file Beckhoff Virtual WLAN Access Point.exe.

2. Follow the installation instructions.
3. Start the software under Start > Beckhoff > Beckhoff - Virtual WLAN Access Point.
4. Define an SSID for the WLAN network and issue a password with at least 8 characters.

5. Click Save and then Start to start the access point.
The access point is started and the start is displayed under **Status Messages**. The WLAN network becomes visible with the defined SSID. Connect your clients to the WLAN network. Connected clients and their IP addresses are displayed under **Connected Devices**.
