EP7414-x071

4-channel motion interface, BLDC motor, 48 V DC, 4 A

2026-04-08 | Version: 1.0

Table of contents

1 Foreword

1.1 Notes on the documentation

This description is intended exclusively for trained specialists in control and automation technology who are familiar with the applicable national standards.
The documentation and the following notes and explanations must be complied with when installing and commissioning the components.
The trained specialists must always use the current valid documentation.

The trained specialists must ensure that the application and use of the products described is in line with all safety requirements, including all relevant laws, regulations, guidelines, and standards.

Disclaimer

The documentation has been compiled with care. The products described are, however, constantly under development.
We reserve the right to revise and change the documentation at any time and without notice.
Claims to modify products that have already been supplied may not be made on the basis of the data, diagrams, and descriptions in this documentation.

Trademarks

Beckhoff®, ATRO®, EtherCAT®, EtherCAT G®, EtherCAT G10®, EtherCAT P®, MX-System®, Safety over EtherCAT®, TC/BSD®, TwinCAT®, TwinCAT/BSD®, TwinSAFE®, XFC®, XPlanar®, and XTS® are registered and licensed trademarks of Beckhoff Automation GmbH.
If third parties make use of the designations or trademarks contained in this publication for their own purposes, this could infringe upon the rights of the owners of the said designations.

EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.

Trademarks of third parties may be used in this documentation. You can find the trademark notices here: https://www.beckhoff.com/trademarks.

1.2 For your safety

Safety regulations

Read the following explanations for your safety.
Always observe and follow product-specific safety instructions, which you may find at the appropriate places in this document.

Exclusion of liability

All the components are supplied in particular hardware and software configurations which are appropriate for the application. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of Beckhoff Automation GmbH & Co. KG.

Personnel qualification

This description is only intended for trained specialists in control, automation, and drive technology who are familiar with the applicable national standards.

Signal words

The signal words used in the documentation are classified below. In order to prevent injury and damage to persons and property, read and follow the safety and warning notices.

Personal injury warnings

⚠ DANGER
Hazard with high risk of death or serious injury.

⚠ WARNING
Hazard with medium risk of death or serious injury.

⚠ CAUTION
There is a low-risk hazard that could result in medium or minor injury.

Warning of damage to property or environment

NOTICE
The environment, equipment, or data may be damaged.

Information on handling the product

This information includes, for example:
recommendations for action, assistance or further information on the product.

1.3 Documentation issue status

Version	Comment
1.0	• First release
0.1	• First preliminary version

Firmware and hardware versions

This documentation refers to the firmware and hardware version that was applicable at the time the documentation was written.

The module features are continuously improved and developed further. Modules having earlier production statuses cannot have the same properties as modules with the latest status. However, existing properties are retained and are not changed, so that older modules can always be replaced with new ones.

The firmware and hardware version (delivery state) can be found in the batch number (D-number) printed on the side of the EtherCAT Box.

Syntax of the batch number (D-number)

D: WW YY FF HH	Example with D no. 29 10 02 01:
WW - week of production (calendar week)	29 - week of production 29
YY - year of production	10 - year of production 2010
FF - firmware version	02 - firmware version 02
HH - hardware version	01 - hardware version 01

Further information on this topic: Version identification of EtherCAT devices [▶ 98].

2 Product overview

The following table shows the products described in this documentation and the main distinguishing features.

Product	Safety features
EP7414-0071	none
EP7414-9071	STO via FSoE

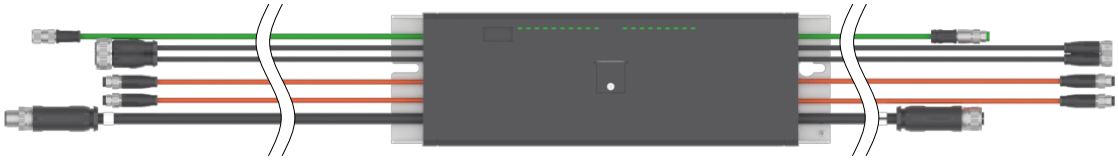
2.1 Introduction

NOTICE

Separate operating instructions for safety functions

The safety functions of product variant -9071 are implemented by the integrated EP2921 TwinSAFE option.

All information on the safety functions can be found in the operating instructions for the EP2921.



The EP7414-x071 EtherCAT Box offers four outputs with integrated MDR controller for the direct connection of 24/48 V_{DC} conveyor roller motors or other BLDC motors with max. 4 A. Two additional digital inputs/outputs per channel enable connection of e.g. photoelectric switches or actuators.

The EP7414-x071 takes over the complete control of a roller motor independently of the manufacturer of conveyor or motor. Maximum rated current, acceleration or deceleration ramps and various other parameters can be configured and allow for a wide range of adaptations to different applications. The control of the motors is sensorless.

The EtherCAT Box measures only 309 mm × 94 mm × 25 mm can be easily mounted in the side profiles on the conveyor frame. It requires no additional protective covering. Power supply is realized via an L coded M12 connector.

2.2 Technical data

All values are typical values over the entire temperature range, unless stated otherwise.

EtherCAT	
Connection	Input: M8 female socket, 4-pin, A-coded Forwarding: M8 male plug, 4-pin, A-coded
Connection cables	PUR green 4 x AWG26 UL AWM 20963 (internal use), UL rating 30 V, UL fire class FT 2 Minimum bending radius: approx. 15 mm
Connection cable length	Input: 2.0 m Forwarding: 0.15 m

Power supply	
Nominal voltage U_S	24 V_{DC} (-15 % / +20 %)
Nominal voltage U_P	24 ... 48 V_{DC}
Connection	Input: 1 x M12 male plug, 5-pin, L-coded Forwarding: 1 x M12 female socket, 5-pin, L-coded
Connection cables	PVC 5 x 2.5 mm² UL AWM 20549 (internal use), UL rating 300 V, UL fire class FT 2 Minimum bending radius: approx. 40 mm
Connection cable length	Input: 2.0 m Forwarding: 0.15 m
Current consumption from U_S	150 mA + load
Current consumption from U_P	Depending on the application
Total current U_S	max. 16 A at the input
Total current U_P	max. 16 A at the input

Motor channels	EP7414-0071	EP7414-9071
Number	4	
Motor type	BLDC motor	
Connection	1 x M8 male plug per channel, 4-pin, A-coded	
Connection cables	PUR Type 1.1 with 4 x 0.5 mm² UL AWM 20549 (internal use), UL rating 300 V, UL fire class FT 2 Minimum bending radius: approx. 25 mm	
Connection cable length	• X20, channel 1: 0.15 m • X21, channel 2: 0.65 m • X22, channel 3: 0.15 m • X23, channel 4: 1.5 m	
Winding inductance	min. 300 µH	
Output current per channel	4 A RMS	
Peak current per channel	8 A for 1 s	
Drive profile	DS402	
Safe stop functions	-	Safe Torque Off (STO)
Safe Torque Off implementation	-	via FSoE
Safety standards	-	• EN ISO 13849-1:2015 (Cat 3, PL e) • EN 61508:2010 (SIL 3) • EN 62061:2005 + A1:2013/ A2:2015 (SIL CL3)
Rotating field frequency	0 … 599 Hz	
PWM clock frequency	16 kHz	
Current controller frequency	32 kHz	
Position controller frequency	16 kHz	
Speed controller frequency	16 kHz	

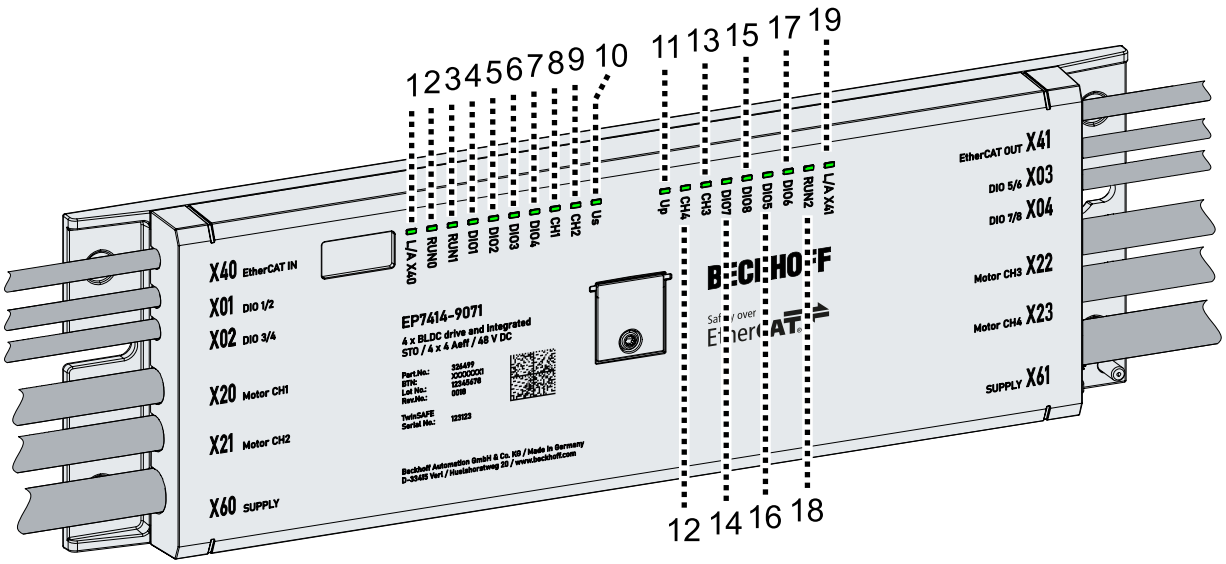
Digital combi channels per motor channel	
Number	2
Connection	1 x M12 female socket, 5-pin, A-coded
Connection cables	PVC 4 x 0.14 mm² UL AWM 2095 (internal use), UL rating 300 V, UL fire class FT 2 Minimum bending radius: approx. 23 mm
Connection cable length	• X01: 0.15 m • X02: 0.65 m • X03: 0.15 m • X04: 1.5 m
Nominal input voltage	24 V_{DC}
Input characteristics	Type 3 according to EN 61131-2, compatible with type 1
Nominal output voltage	24 V_{DC} from U_S, short-circuit proof
Output current	max. 0.5 A per output
Total output current	max. 1 A per connection, including sensor power supply
Sensor power supply	24 V_{DC} from U_S, short-circuit proof max. 0.5 A per motor channel 1+2 max. 0.5 A per motor channel 3+4

Housing data	
Dimensions W × H × D	309 mm × 94 mm × 25 mm
Weight	1400 g
Installation position	Any
Materials	Aluminum, PC/ABS
Mounting	Two mounting holes Ø6.5 mm for M6

Ambient conditions	
Ambient temperature during operation	0 ... 50 °C
Ambient temperature during storage	-25 ... +85 °C
Vibration / shock resistance	in accordance with EN 60068-2-6 / EN 60068-2-27
EMC immunity / emission	in accordance with EN 61000-6-2 / EN 61000-6-4
Protection rating	IP54 according to EN 60529

Approvals	EP7414-0071	EP7414-9071
Approvals	CE, UL	CE, UL, TÜV SÜD

2.3 Status LEDs



Position	Labeling	Status	Meaning
1	L/A X40	Lights up green	Link: connection to the preceding EtherCAT device
		Flashing green	Act: communication with the preceding EtherCAT device
2	RUN0	[1]	EtherCAT Run-LED for the safety card
3	RUN1	[1]	EtherCAT Run-LED for motor channels 1+2
4	DIO1	Lights up green	High level on digital combi channel 1 (X01, pin 4)
5	DIO2	Lights up green	High level on digital combi channel 2 (X01, pin 2)
6	DIO3	Lights up green	High level on digital combi channel 3 (X02, pin 4)
7	DIO4	Lights up green	High level on digital combi channel 4 (X02, pin 2)
8	CH1	Off	Axis switched off
		Lights up green	Axis in control
		Lights up red	Axis Errors
		Lights up yellow	Warning active + axis in control
		Flashes yellow	Warning active + axis not in control
9	CH2	Off	Axis switched off
		Lights up green	Axis in control
		Lights up red	Axis Errors
		Lights up yellow	Warning active + axis in control
		Flashes yellow	Warning active + axis not in control
10	Us	Lights up green	The supply voltage U_S is available.
11	Up	Lights up green	The supply voltage U_P is available
12	CH4	Off	Axis switched off
		Lights up green	Axis in control
		Lights up red	Axis Errors
		Lights up yellow	Warning active + axis in control
		Flashes yellow	Warning active + axis not in control
13	CH3	Off	Axis switched off
		Lights up green	Axis in control
		Lights up red	Axis Errors
		Lights up yellow	Warning active + axis in control
		Flashes yellow	Warning active + axis not in control
14	DIO7	Lights up green	High level on digital combi channel 7 (X04, pin 4)
15	DIO8	Lights up green	High level on digital combi channel 8 (X04, pin 2)
16	DIO5	Lights up green	High level on digital combi channel 5 (X03, pin 4)
17	DIO6	Lights up green	High level on digital combi channel 6 (X03, pin 2)
18	RUN2	[1]	EtherCAT Run-LED for motor channels 3+4
19	L/A X41	Lights up green	Link: connection to the following EtherCAT device
		Flashing green	Act: communication with the following EtherCAT device

[1] See following table

EtherCAT Run

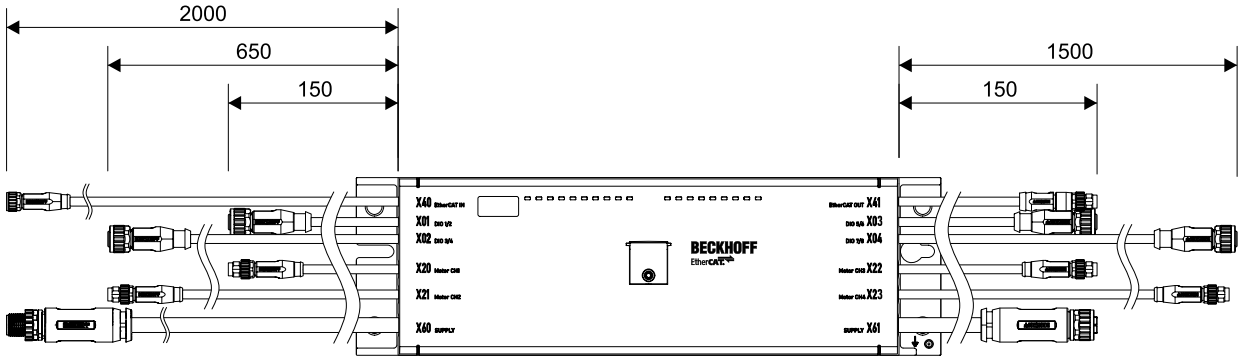
The EtherCAT Run LEDs signal the current operating status of the EtherCAT devices.

Status	Operating status
Lights up	Operational
Flashes evenly	Pre-Operational
Flashes sporadically	Safe-Operational
Flashes very quickly	Boot
Off	Init

A description of the operating states can be found in the "EtherCAT | System Description": Link.

3 Mounting and connection

3.1 Dimensions



All dimensions are given in millimeters.
The drawing is not true to scale.

3.2 Mounting

NOTICE

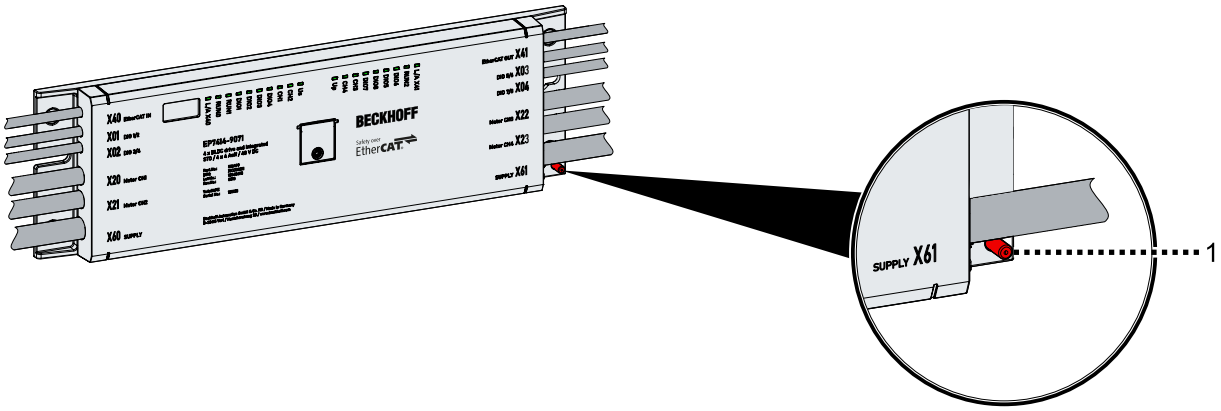
Dirt during assembly

Dirty connectors can lead to malfunctions. The protection rating specified in the technical data is only guaranteed if all connectors are connected or closed with protective caps.

- Protect the connectors against dirt during the assembly.

Mount the module with two M6 screws in the mounting holes.

3.3 Functional earth



Ground the box with a low impedance via the grounding bolt [1].

3.4 Cabling

NOTICE

Damage caused by live wiring

Risk of defect.

- Only wire when de-energized.

3.4.1 EtherCAT

NOTICE

Risk of confusion with M8 connectors

The EtherCAT connections and motor connections have the same connector type and can be connected incorrectly by mistake. An incorrect connection can lead to defects.

- *Do not* connect EtherCAT connections and motor connections to each other.
- Note the cable colors: green for EtherCAT, black for motors

NOTICE

Use exclusively in EtherCAT networks

A connection of the EtherCAT connections to telecommunication networks can lead to network failure and data loss.

- Do not connect to telecommunications networks

EtherCAT

Input: M8 female socket		Pin	Function
		1	Tx+
		2	Rx+
		3	Rx-
		4	Tx-

Forwarding: M8 male plug		Pin	Function
		1	Tx+
		2	Rx+
		3	Rx-
		4	Tx-

3.4.2 Supply voltage input

⚠ WARNING

Power supply from SELV / PELV power supply unit!

SELV / PELV circuits (safety extra-low voltage / protective extra-low voltage) according to IEC 61010-2-201 must be used to supply this device.

Notes:

- SELV / PELV circuits may give rise to further requirements from standards such as IEC 60204-1 et al, for example with regard to cable spacing and insulation.
- A SELV supply provides safe electrical isolation and limitation of the voltage without a connection to the protective conductor, a PELV supply also requires a safe connection to the protective conductor.

⚠ CAUTION

Additional condition for UL operation

- Do not use unlimited voltage sources for the power supply

NOTICE

Special fuse protection required

Defect possible with insufficiently dimensioned fuse protection for the +48 V_{DC} U_P supply voltage.

- Dimension the fuse protection for the +48 V_{DC} U_P supply voltage so that the maximum current flow is limited to 3 times the rated current (max. 1 second).

Input: M12 male plug		Pin	Function
		1	+24 V_{DC} U_S
		2	GND_P
		3	GND_S
		4	+48 V_{DC} U_P
		5	⏚

3.4.3 Supply voltage downstream connection

The supply voltages applied to the supply voltage input are available at the forwarding output for supplying other devices.

NOTICE

Risk of overload

Excessive output currents from the forwarding output can cause the maximum permissible input current at the supply voltage input to be exceeded.

- Ensure that the maximum input current of 16 A at the supply voltage input is not exceeded for either U_S or U_P

Forwarding: M12 female socket		Pin	Function
		1	+24 V_{DC} U_S
		2	GND_P
		3	GND_S
		4	+48 V_{DC} U_P
		5	⏚

3.4.4 Motor

NOTICE

Risk of confusion with M8 connectors

The EtherCAT connections and motor connections have the same connector type and can be connected incorrectly by mistake. An incorrect connection can lead to defects.

- *Do not* connect EtherCAT connections and motor connections to each other.
- Note the cable colors: green for EtherCAT, black for motors

Motor

M8 male plug		Pin	Function
		1	GND_P
		2	Motor phase U
		3	Motor phase V
		4	Motor phase W

3.4.5 Digital I/O

NOTICE

Incorrect signal levels due to electromagnetic interference

The digital inputs are optimized for fast signal transmission and are therefore susceptible to electromagnetic interference.

Under the influence of electromagnetic interference, a false signal level can be detected.

- If necessary, use shielded signal lines.

I/O

M12 female socket		Pin	Function
		1	U_S = 24 V_{DC}
		2	Input/Output B
		3	GND_S
		4	Input/Output A
		5	n.c.

3.5 Disposal

Products marked with a crossed-out wheeled bin shall not be discarded with the normal waste stream. The device is considered as waste electrical and electronic equipment. The national regulations for the disposal of waste electrical and electronic equipment must be observed.

4 Commissioning and configuration

4.1 Integrating into a TwinCAT project

The procedure for integration in a TwinCAT project is described in these Quick start guide.

4.2 Motor channel selection

The four motor channels are distributed across two internal EtherCAT devices:

- Device “EP7412-9000”: Motor channels 1 and 2
- Device “EP7422-9000”: Motor channels 3 and 4

The following chapters describe the commissioning of the first channel of one of these devices. The steps are the same for both devices.

Choose the corresponding device to select the motor channel to commission:

Motor channel	Commissioning via
1	Device “EP7412-9000”, channel 1
2	Device “EP7412-9000”, channel 2
3	Device “EP7422-9000”, channel 1
4	Device “EP7422-9000”, channel 2

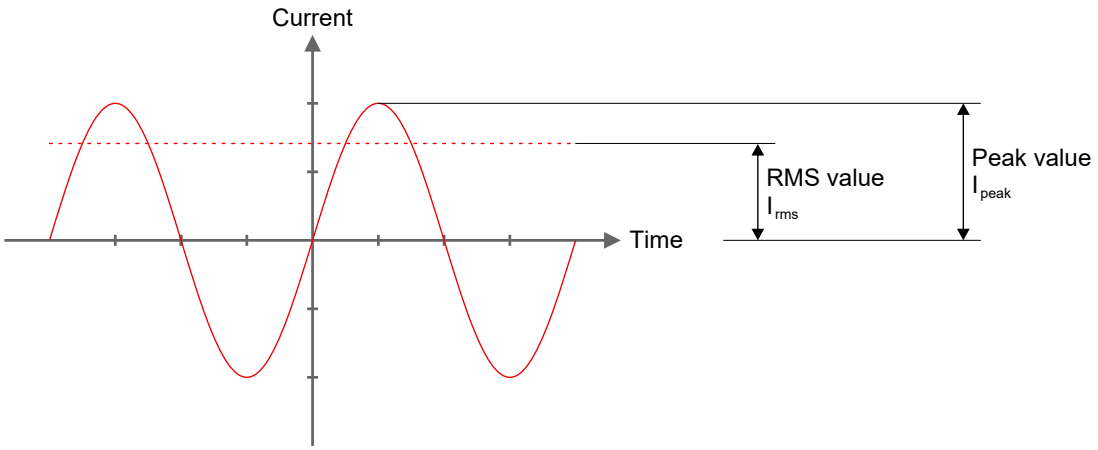
4.3 Quick start guide

This quick start guide describes commissioning using the example of the first motor channel in sensorless mode. The EP7414-9071 only supports sensorless operation, i.e. operation without external feedback.

To ensure successful commissioning, carry out all the steps in the following chapters in the order given:

4.3.1 Parameterization

Enter alternating current data as peak values



All alternating current data must be entered as peak values.

- If RMS values are specified in the motor data sheet, multiply them by √2 to convert them to a peak value.
  4 A_{rms} must be converted to 5.657 A_{peak}, for example.

Motor parameters

Set the following parameters according to the specifications in the motor data sheet:

- 0x6075:0 "Motor rated current Ch.1": rated current in [mA] as peak value
- 0x2003:11 "Max current": maximum current in [mA] as peak value
- 0x2003:2E "Rated speed" rated velocity in [rpm]
- 0x2003:13 "Motor pole pairs": the number of pole pairs of the motor

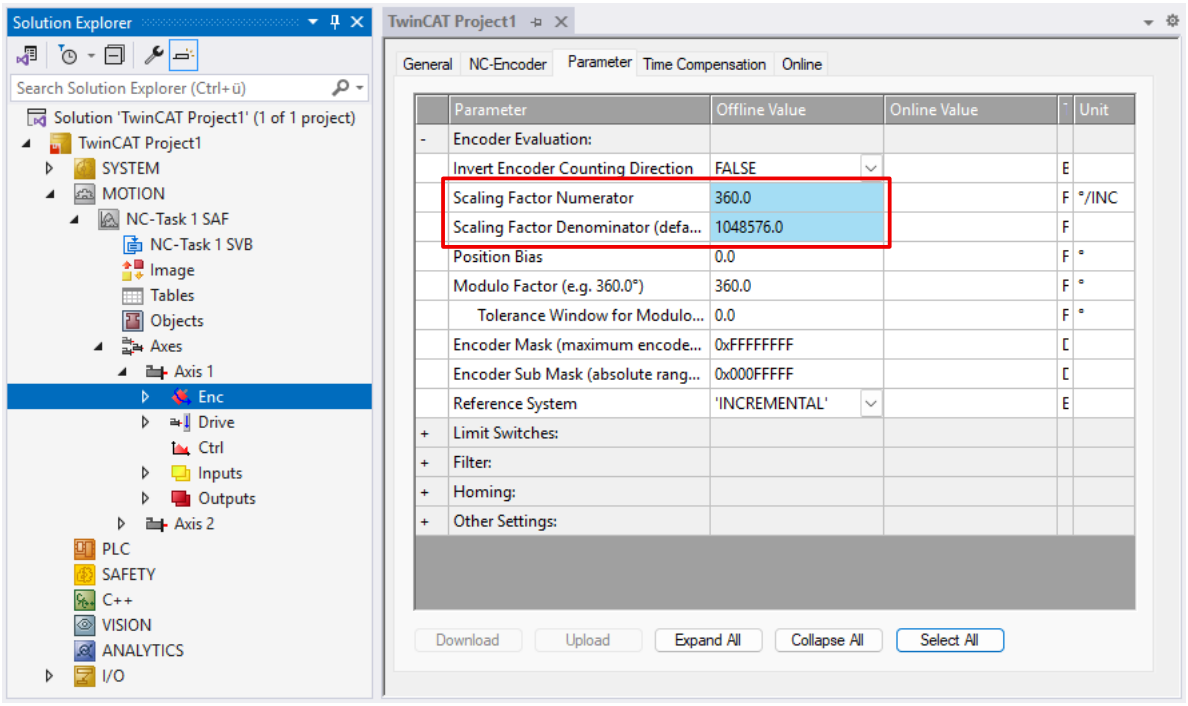
If the number of pole pairs of the motor is unknown, leave the parameter at the default value 1. The actual motor speed is then reduced by the factor "number of pole pairs" compared to the default.
After commissioning, you can determine the number of pole pairs experimentally, see chapter Determine number of pole pairs [▶ 31].

Further parameters

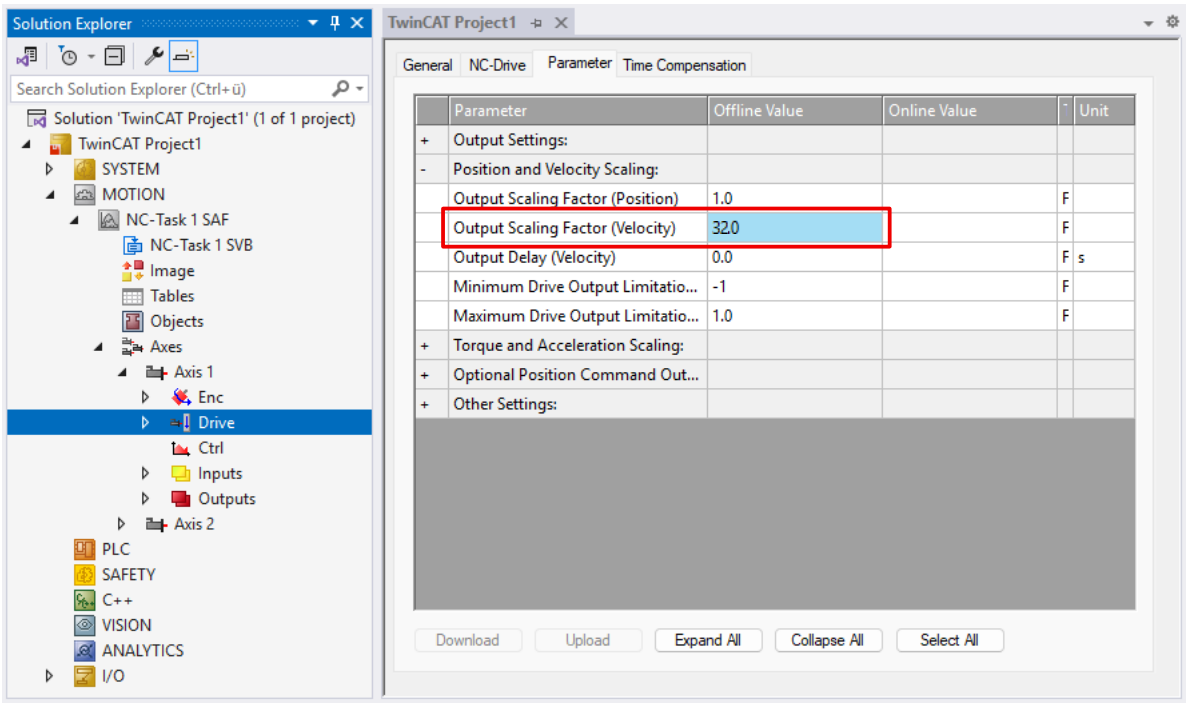
- 0x2002:64 set "Commutation type" to "Sensorless FOC with forced startup".
- DC link settings in CoE object 0xF800

NC scaling factors

- **Position values**
  Default: 0x100000 = 1048576_{dec} increments = 1 revolution



- **Velocity values**
  Default: 268435 increments = 1 revolution



- **Torque values**
  Default: 1000 increments = rated motor current

4.3.2 Prepare for operation

- Switch on the external supply voltage U_P = 48 V_{DC}
- Activate STO logic

4.3.3 Scan motor

⚠ CAUTION

The motor moves during scanning

The motor rotates in both directions by approx. 1 revolution each during scanning. Injuries and property damage are possible.

- Ensure that no one is harmed and nothing is damaged
- Ensure that the axis can move freely. Release brakes, clamping devices, etc.

You can perform the scan with or without a connected load. If you perform the scan with a connected load, the joint moment of inertia of the motor shaft and the load is measured when the parameter 0x2003:18 "Rotor moment of inertia" is measured.

✓ Prerequisite: all previous steps in this quick start guide have been carried out correctly.

1. If you have already enabled the axis, cancel the axis enable
2. For channel 1: Write the command 0x8007 to the register FB00:01 "Request".
   For channel 2: Write the command 0x8017 to the register FB00:01 "Request".
   ⇨ The scan will be executed. It takes about one minute.
3. Monitor the status of the scan in parameter 0xFB00:02:

Value of 0xFB00:02 "Status"	Meaning
100_{dec}…200_{dec}	Progress of the scan • 100 = 0% • 200 = 100%
0	The scan was successful
1…3	Error. See error message in the "Diag History"

If the scan was successful, the values determined are saved in the following CoE parameters:

- 0x2003:16 "Torque constant"
- 0x2003:18 "Rotor moment of inertia"
- 0x2003:19 "Winding inductance"
- 0x2003:2D "Motor thermal time constant"
- 0x2003:30 "Winding resistance"
- 0x2003:31 "Voltage constant"
- 0x2002:12 "Current loop integral time"
- 0x2002:13 "Current loop proportional gain"
- 0x2002:14 "Velocity loop integral time"
- 0x2002:15 "Velocity loop proportional gain"

4.3.4 Optimization, fine tuning

The axis is now ready for operation. You can move it for test purposes and optimize it with the following parameters:

- 0x2002:72 "Stand still torque limitation"
  This parameter limits the holding current at standstill in order to reduce energy consumption and heating of the motor.
- 0x2002:79 "Sensorless Startup Current Scaling"
  Scaling factor for the current that is driven during the start-up phase in sensorless mode. Is specified in 1/10 of the rated current, i.e. the value 1000 corresponds to 100% of the rated current.
  A higher value leads to a higher starting torque, but also to higher motor heating.
- Controller parameters:
  - 0x2002:14 "Velocity loop integral time"
  - 0x2002:15 "Velocity loop proportional gain"
  - 0x2002:17 "Position loop proportional gain"

4.4 Determine number of pole pairs

If the number of pole pairs of the motor is not specified in the data sheet, you can determine it experimentally.

Procedure

✓ Prerequisite: the motor has been configured in accordance with the chapter Quick start guide [▶ 26].

1. Ensure that the parameter 0x2003:13 "Motor pole pairs" has the value 1.
2. Send the request to the motor to perform a full rotation.
   ⇨ The motor only performs a partial rotation because the number of pole pairs has not yet been set correctly.
3. Repeat the request until the motor has completed one full rotation.
   ⇨ The number of requests needed for a full rotation corresponds to the number of pole pairs.
4. Enter the number of pole pairs in the parameter 0x2003:13 "Motor pole pairs".
5. Perform the scanning of the motor again: Scan motor [▶ 29]

4.5 Commissioning with Drive Motion Control

With Drive Motion Control you can implement a drive motion control without TwinCAT NC. One possible use case for Drive Motion Control is the operation of an EP7414-9071 on a small controller that does not have sufficient performance for the TwinCAT NC.

The documentation of the PLC library for Drive Motion Control can be found on the Beckhoff website: Tc3_DriveMotionControl.

4.5.1 Requirements

TwinCAT 3.1, Build 4024.7 or higher.

4.5.2 Functionality

4.5.2.1 Supported functions

Administrative functions

- Axis functions
  - MC_Power
  - MC_Reset
  - MC_SetPosition
- Touch probe
  - MC_AbortTrigger
  - MC_TouchProbe

Motion functions

- Homing
  - MC_Home (Here the bCalibrationCam input of the Tc2_Mc2 library cannot be used, but one of the digital inputs of the EP7414-9071 must be used)
- Manual movement
  - MC_Jog
- Point to point movement
  - MC_Halt
  - MC_MoveAbsolute
  - MC_MoveModulo
  - MC_MoveRelative
  - MC_MoveVelocity
  - MC_Stop

4.5.2.2 Functions that are not supported

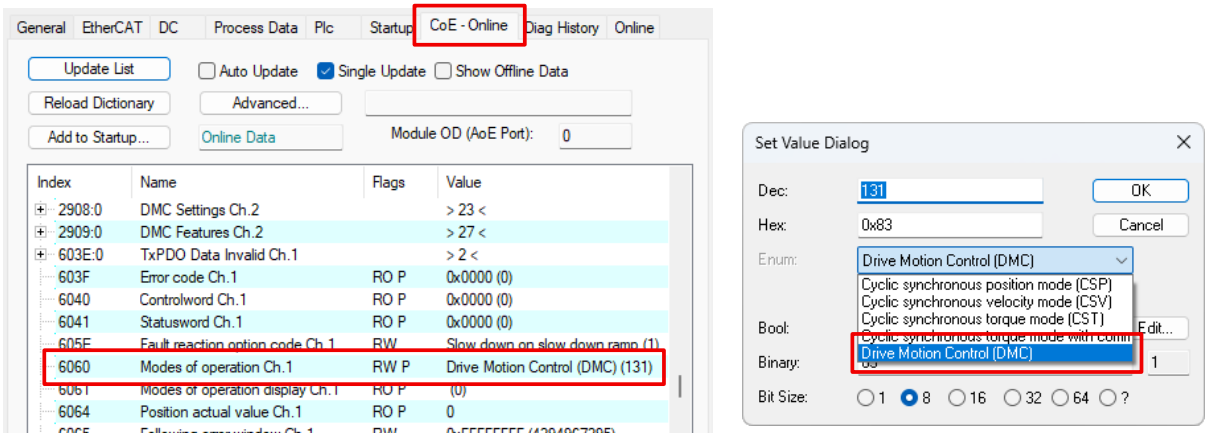
All subsequently triggered functions with the aim of changing the target position or speed during an active travel command are not supported (buffer mode).

4.5.3 Commissioning in TwinCAT 3

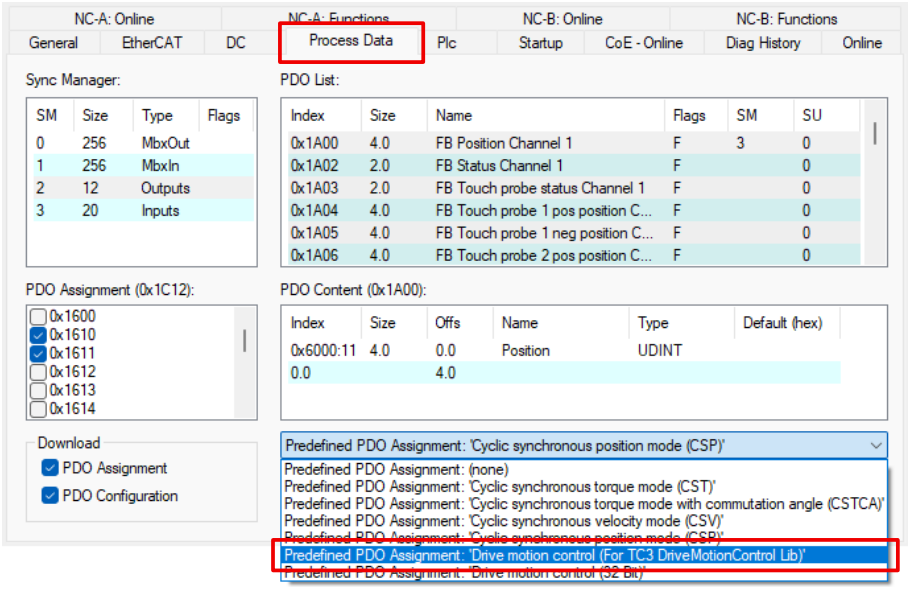
Use the following steps to configure channel 1 of a EP7414-9071 for operation with Drive Motion Control.

Configure channel 2 in the same way. The parameter indices for channel 2 are each increased by 0x0800 compared to channel 1.

1. Set the operation mode “Drive Motion Control (DMC)” in CoE parameter 0x6060 “Modes of operation”.



2. Activate the Predefined PDO Assignment “Drive motion control (For TC3 DriveMotionControl Lib)”.

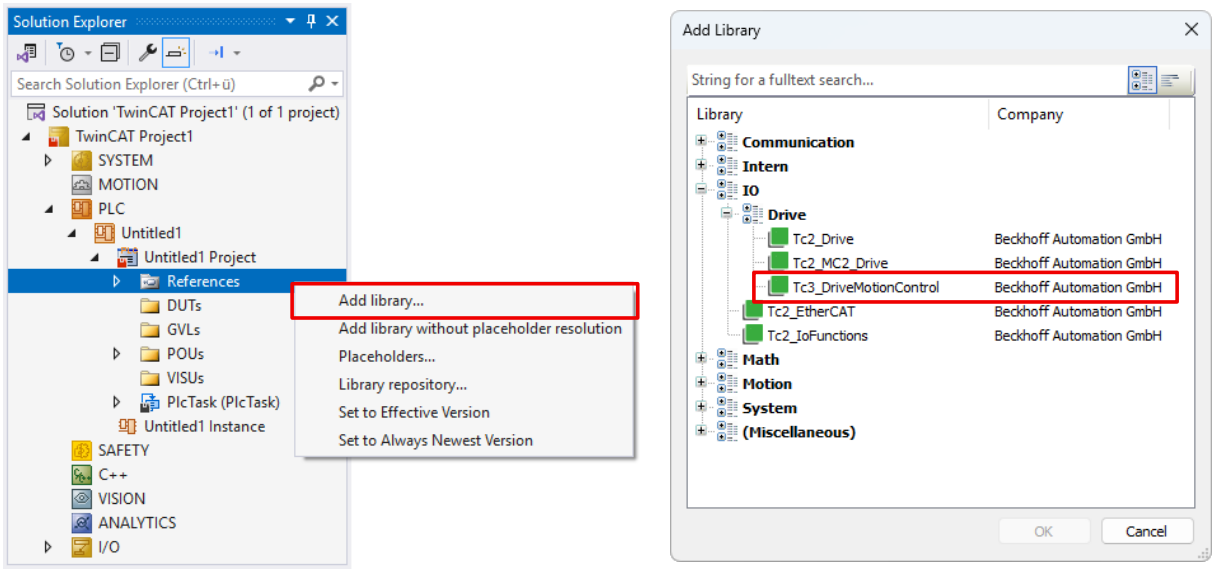


⇨ The process data for using Drive Motion Control is activated.

PLC configuration

1. Create a PLC project if none has been created yet.

2. Add the “Tc3_DriveMotionControl” library to the PLC project.
   (If you want to use Drive Motion Control without the “Tc3_DriveMotionControl” library, see chapter State machine [▶ 39].)



3. If the “Tc3_DriveMotionControl” and “Tc2_Mc2” libraries are used simultaneously in the current project: Set the “Qualified access only” property to “True” in the “Properties” window for one of the two libraries.

   ⇨ The library with “Qualified access only” can only be addressed in the PLC code via the corresponding namespace, e.g.: `Tc3_DriveMotionControl.MC_Stop()`
   This avoids name conflicts, e.g. when calling the function block `MC_Stop`, which has the same name in both libraries.

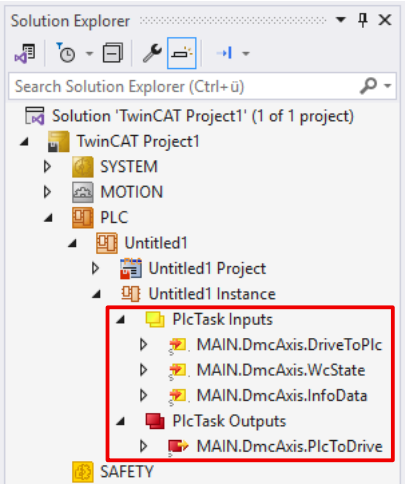
4. Declare a variable of type “AXIS_REF” in the PLC. Sample:

```
VAR
   DmcAxis:   AXIS_REF;
END_VAR
```

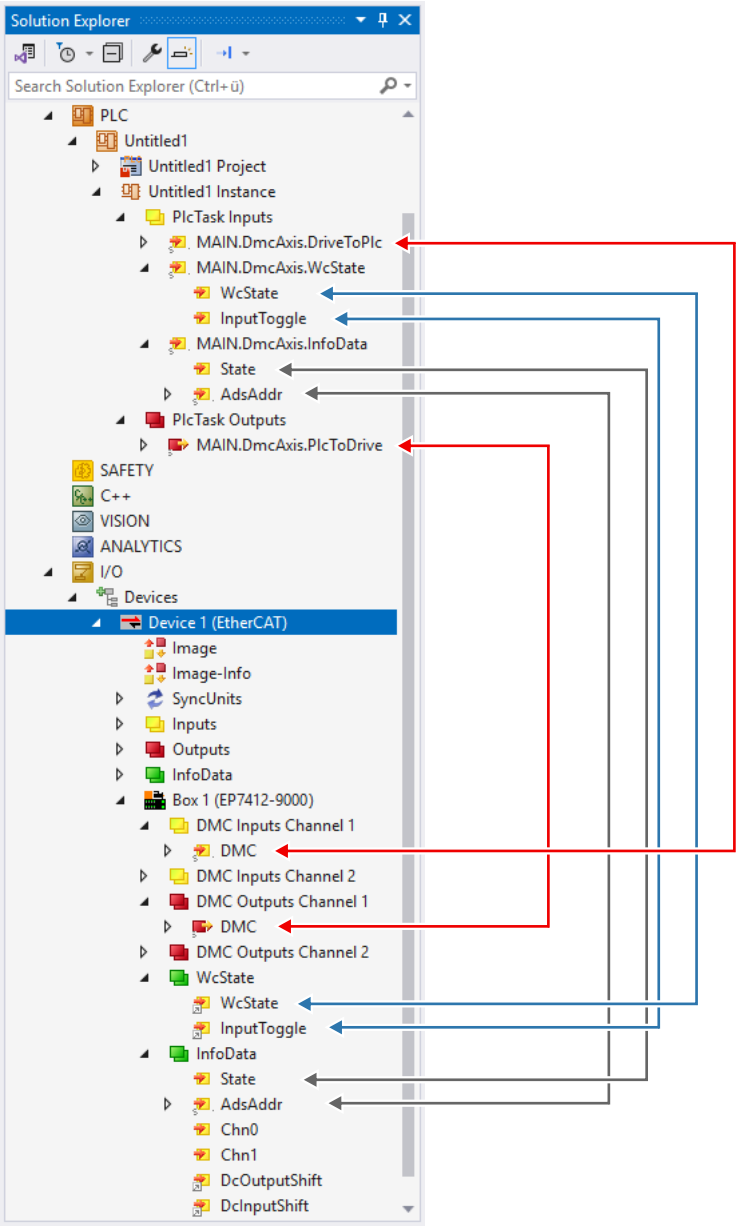
5. Click on “Build’ > “Build Solution” in the menu bar.

   ⇨ The project is compiled.

⇨ The process image of the PLC task is generated.



6. In the Solution Explorer link the PLC variables with the process data of EP7414-9071.



7. In the PLC code, call the function block `ReadStatus()` cyclically, ideally at the beginning of each PLC cycle.

4.5.3.1 Parameter

CoE parameters

The CoE parameters for configuring Drive Motion Control can be found in the following CoE objects:

- 0x2108 / 0x2908 DMC Settings [▶ 54]
- 0x2109 / 0x2908 DMC Features [▶ 54]

Scaling factor and maximum velocity

Position values are defined as 64-bit variables at Drive Motion Control.
The low-order 32 bits resolve the single-turn increments. The possibly lower resolution of the feedback is extrapolated to the full 32 bits.
The higher-order 32 bits represent the multi-turn revolutions.

The feed constant “Feed constant” includes any transmission ratios (gearbox, belt, etc.) and represents the output-side travel per motor revolution.

Therefore, the following exemplary formula without transmission ratio results for the scaling factor:

$$Encoder\ Scaling\ Factor = \frac{Feed\ constant}{32\ Bit} = \frac{360°}{32\ Bit} \approx 8.3819031715393066e-8$$

The maximum achievable velocity of the motor depends on the DC link voltage. If lower voltages than specified in the data sheet are used, the rated speed may have to be adjusted to the voltage. To specify the maximum velocity of the motor in the CoE directory, the object 0x6080 “Max motor speed” is also used. The DC link-dependent motor speed is specified here in 1/min. To adjust the velocity of the scaling, this value is multiplied by the feed constant and normalized to the unit second. This results in the following formula for the exemplary calculation of the maximum velocity:

$$MaxVelocity = \frac{Max\ motor\ speed \cdot Feed\ constant}{60\frac{s}{min}} = \frac{1000\frac{U}{min} \cdot 360°}{60\frac{s}{min}} = 6000\frac{°}{s}$$

The following sample shows the implementation in a PLC program:

```
PROGRAM MAIN
VAR
   DmcAxis:   AXIS_REF
END_VAR

// Update the axis structure
DmcAxis.ReadStatus();

// Scaling factor without gear ratio, feed constant 360°
DmcAxis.Parameter.EncoderScalingFactor := 0.00000008381903171539306 6;

// Velocity scaling with 1000 rpm, feed constant 360°
DmcAxis.Parameter.MaxVelocity := 6000;
```

4.5.4 Commissioning with a third-party 32-bit controller

The “Tc3_DriveMotionControl” library cannot be used.

You can only execute travel commands by going through the state machine manually. See chapter State machine [▶ 39].

Since the box provides 64-bit process data by default, but this cannot be processed by some controllers, there is also the alternative option of mapping the process image with 32 bits. This can be set via the Predefined PDO Assignment “Drive motion control (32 Bit)”.
(To map the inputs and outputs manually, use the indices 0x1661 / 0x16E1 and 0x1A61 / 0x1AE1.)

All position related process data are 32-bit instead of 64-bit with this Predefined PDO Assignment. The 32 bits are divided into 20-bit single-turn and 12-bit multi-turn revolutions, independent of the resolution of the feedback.
The box still calculates internally with 64-bit data. Therefore, for example, 0x2108:08 “Calibration Position” must still be specified in 32-bit single-turn and 32-bit multi-turn instead of 20-bit single-turn and 12-bit multi-turn.

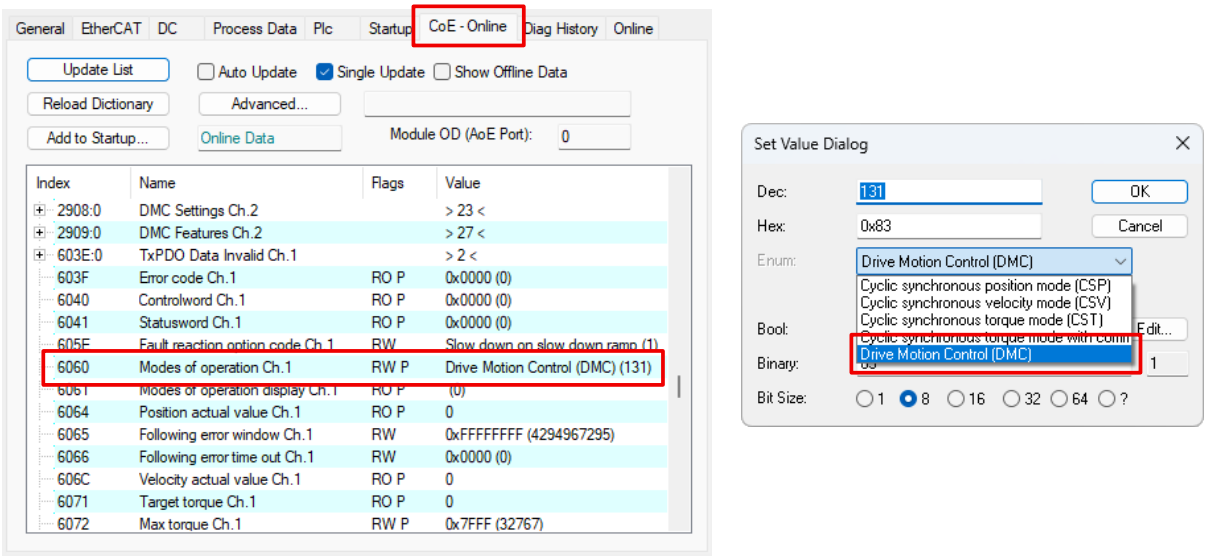
All non-position related process data remain unchanged in size. The address offsets of the individual process data are identical and padding bytes are inserted at the corresponding positions.

The velocity-related process data is scaled in 10,000ths of the parameter 0x6080 “Max motor speed”.

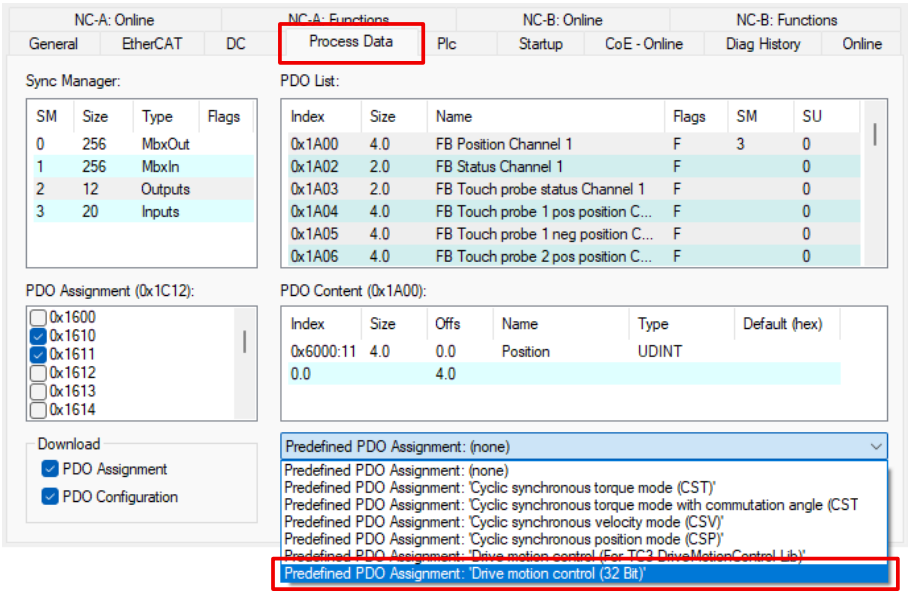
The process data for acceleration and deceleration specify in ms how fast the motor should accelerate to the speed specified in 0x6080 “Max motor speed” or decelerate from velocity to standstill. With a value of 2000 for the acceleration, the motor would need 2 s to reach the velocity.

Configuration

1. Set the operation mode “Drive Motion Control (DMC)” in CoE parameter 0x6060 “Modes of operation”.



2. Activate the Predefined PDO Assignment “Drive motion control (32 Bit)”.



⇨ The process data for using Drive Motion Control is activated.

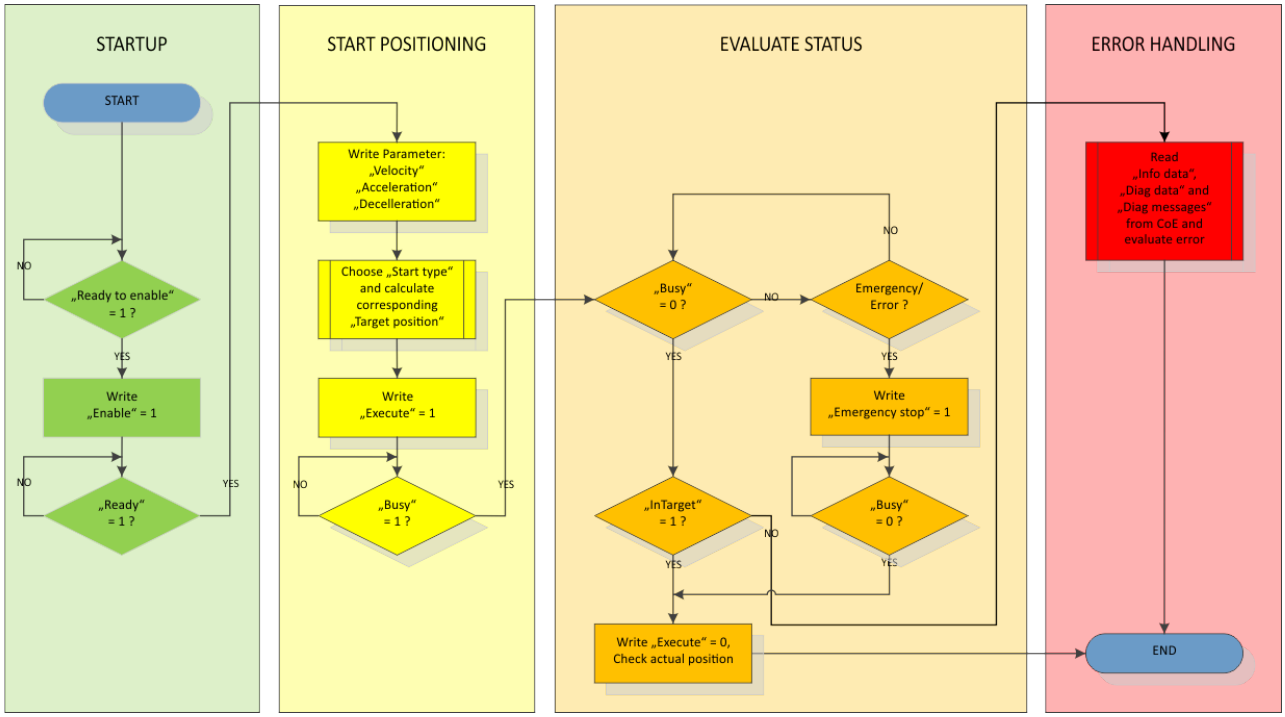
CoE parameters

The CoE parameters for configuring Drive Motion Control can be found in the following CoE objects:

- 0x2108 / 0x2908 DMC Settings [▶ 54]
- 0x2109 / 0x2908 DMC Features [▶ 54]

4.5.5 State machine

It is also possible to start travel commands without the function blocks of the library "Tc3_DriveMotionControl". This is based on the following state machine:



The variables for control and evaluation are located in the process data objects "DMC Inputs" and "DMC Outputs":

- DMC Inputs
  - DMC
    - FeedbackStatus
      - Latch extern valid
      - Set counter done
      - Status of extern latch
    - DriveStatus
      - Ready to enable
      - Ready
      - Warning
      - Error
      - Moving positive
      - Moving negative
      - Digital input 1
      - Digital input 2
    - PositioningStatus
      - Busy
      - In-Target
      - Warning
      - Error
      - Calibrated
      - Accelerate
      - Decelerate
      - Ready to execute
    - Set position
    - Set velocity
    - Actual drive time
    - Actual position lag
    - Actual velocity
    - Actual position
    - Error id
    - Input cycle counter
    - Channel id
    - Latch value
    - Cyclic info data 1
    - Cyclic info data 2

- DMC Outputs
  - DMC
    - FeedbackControl
      - Enable latch extern on positive edge
      - Set counter
      - Enable latch extern on negative edge
    - DriveControl
      - Enable
      - Reset
    - PositioningControl
      - Execute
      - Emergency stop
    - Set counter value
    - Target position
    - Target velocity
    - Start type
    - Target acceleration
    - Target deceleration

4.5.6 Differences compared with Tc2_Mc2

Tc2_Mc2 is the PLC library used for the operation of EP7414-9071 with TwinCAT NC.

The function blocks of the Tc3_DriveMotionControl library have a similar structure to that of Tc2_Mc2. However, Tc3_DriveMotionControl differs from Tc2_Mc2 in the following points:

- It is mandatory to specify values for the accelerations because there are no default values.
- “After-triggering functions” are not supported. Therefore there is no “BufferMode”.
- MC_Home has no input “bCalibrationCam”. The settings for homing are located in the CoE object 0x2109 / 0x2909 “DMC Features”.

4.5.7 Start types

Start type	Code	Description
ABSOLUTE	0x0001	Absolute positioning to a specified target position
RELATIVE	0x0002	Relative positioning to a calculated target position; a specified position difference is added to the current position
ENDLESS_PLUS	0x0003	Endless travel in the positive direction of rotation (direct specification of a speed)
ENDLESS_MINUS	0x0004	Endless travel in the negative direction of rotation (direct specification of a speed)
MODULO_SHORT	0x0105	Modulo positioning along the shortest path to the modulo position (positive or negative), calculated by the "Modulo factor"
MODULO_PLUS	0x0205	Modulo positioning in the positive direction of rotation to the calculated modulo position
MODULO_MINUS	0x0305	Modulo positioning in the negative direction of rotation to the calculated modulo position
CALI_PLC_CAM	0x6000	Start a calibration with cam (digital inputs)
CALI_ON_BLOCK	0x6200	Start a calibration "on Block"
CALI_SET_POS	0x6E00	Set as calibrated, do not change the position
CALI_CLEAR_POS	0x6F00	Clear calibration bit

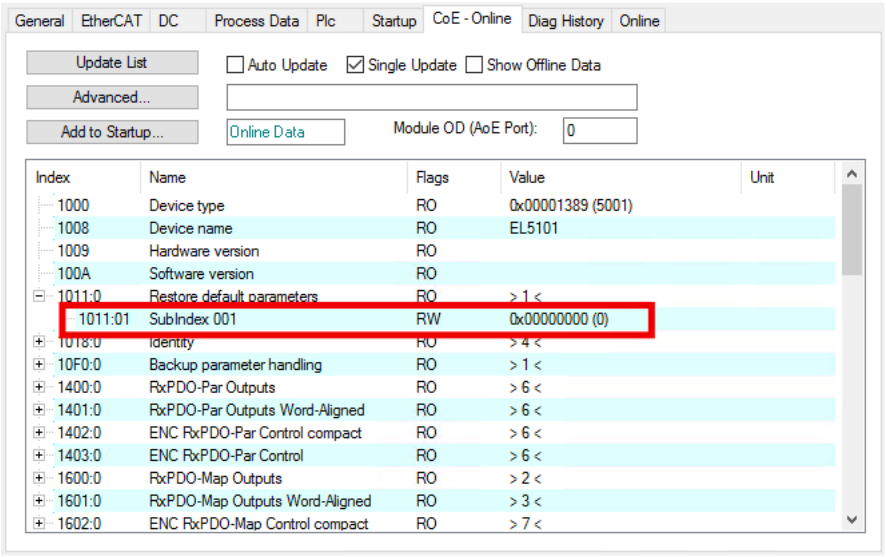
4.5.8 Error messages

Error Code	Message
0x4420	Cogging compensation not supported
0x8450	Invalid Start Type 0x%x, "%x" replaced by the unsupported start type from the PDO
0x8451	Invalid limit switch level
0x8452	Drive error during positioning
0x8453	Latch unit will be used by multiple modules
0x8454	Drive not in control
0x8455	Invalid value for "Target acceleration"
0x8456	Invalid value for "Target deceleration"
0x8457	Invalid value for "Target velocity"
0x8458	Invalid value for "Target position"
0x8459	Emergency stop active
0x845A	Target position exceeds Modulofactor
0x845B	Drive must be disabled
0x845C	No feedback found
0x845D	Modulo factor invalid
0x845E	Invalid target position window

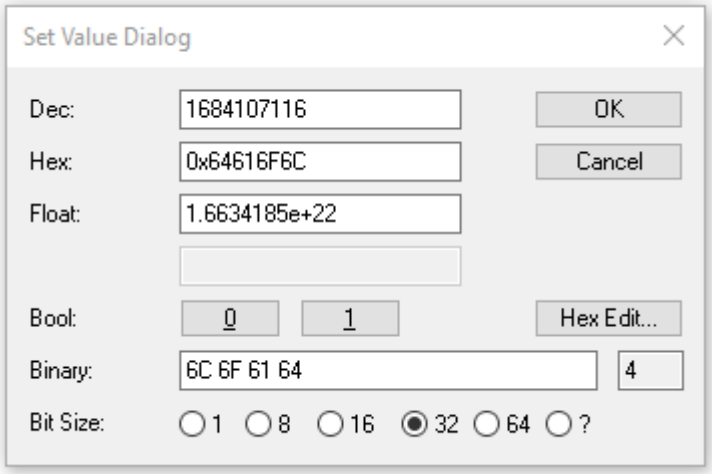
4.6 Restore the delivery state

You can restore the delivery state of the backup objects as follows:

1. Ensure that TwinCAT is running in Config mode.
2. In CoE object 1011:0 "Restore default parameters" select parameter 1011:01 "Subindex 001".



3. Double-click on "Subindex 001".
   ⇨ The "Set Value Dialog" dialog box opens.
4. Enter the value 1684107116 in the "Dec" field.
   Alternatively: enter the value 0x64616F6C in the "Hex" field.



5. Confirm with "OK".

⇨ All backup objects are reset to the delivery state.

Alternative restore value

With some older modules the backup objects can be changed with an alternative restore value:
Decimal value: 1819238756
Hexadecimal value: 0x6C6F6164

An incorrect entry for the restore value has no effect.

Index 2n02 Amplifier Settings Ch.x

- Index 2002: Amplifier Settings Ch.1
- Index 2802: Amplifier Settings Ch.2

Subindex (hex)	Name	Meaning	Data Type	Flags	Default
0	Amplifier Settings Ch.x		USINT	RO	0x7A (122_{dec})
12	Current loop integral time	Integral component of current controller. Unit: [0.1 ms]	UINT	RW	0xA (10_{dec})
13	Current loop proportional gain	Proportional component of current controller. Unit: [0.1 V/A]	UINT	RW	0x64 (100_{dec})
14	Velocity loop integral time	Integral component of velocity controller. Unit: [0.1 ms]	UDINT	RW	0x96 (150_{dec})
15	Velocity loop proportional gain	Proportional component of velocity controller. Unit: [mA / (rad/s)]	UDINT	RW	0x14 (20_{dec})
17	Position loop proportional gain	Proportional component position controller. Unit: [(rad/s) / rad]	UDINT	RW	0xA (10_{dec})
29	Amplifier I2T warn level	I²T model warning threshold. Unit: [%]	USINT	RW	0x50 (80_{dec})
2A	Amplifier I2T error level	I²T model error threshold. Unit: [%]	USINT	RW	0x69 (105_{dec})
31	Velocity limitation	Velocity limitation. If a gear ratio is configured (parameter 6091/6891), this limit value refers to the load side. Unit: [1/min]	UDINT	RW	0x186A0 (100000_{dec})
32	Short circuit brake duration max	Maximum holding time for anchor short-circuit braking Unit: [ms]	UINT	RW	0x3E8 (1000_{dec})
33	Stand still window	Standstill window Unit: [1/min]	UINT	RW	0x1 (1_{dec})
49	Halt ramp deceleration	Halt ramp deceleration. Unit: [0.1 rad / s²]	UDINT	RW	0xF570 (62832_{dec})
54	Feature bits	Reserved. Please do not change.	UDINT	RW	0x0 (0_{dec})
55	Select info data 1	Possible values: • 2_{dec}: DC link voltage (mV) • 4_{dec}: PCB temperature (0.1 °C) • 7_{dec}: I2T Motor • 8_{dec}: I2T Amplifier • 10_{dec}: Digital inputs	USINT	RW	0x2 (2_{dec})
56	Select info data 2	Possible values: • 2_{dec}: DC link voltage (mV) • 4_{dec}: PCB temperature (0.1 °C) • 7_{dec}: I2T Motor • 8_{dec}: I2T Amplifier • 10_{dec}: Digital inputs	USINT	RW	0x4 (4_{dec})
57	Velocity feed forward gain	Scaling factor for velocity feedforward from the position interpolator.	USINT	RW	0x64 (100_{dec})
58	Select info data 3	Possible values: • 2_{dec}: DC link voltage (mV) • 4_{dec}: PCB temperature (0.1 °C) • 7_{dec}: I2T Motor • 8_{dec}: I2T Amplifier • 10_{dec}: Digital inputs	USINT	RW	0x7 (7_{dec})
59	Error suppression mask	Reserved. Please do not change.	UDINT	RW	0x0 (0_{dec})

Subindex (hex)	Name	Meaning	Data Type	Flags	Default
5F	Sensorless observer bandwidth	Observer bandwidth for sensorless control Unit: [Hz]	UINT	RW	0xC8 (200_{dec})
62	Position loop deadband window	Deadband window of the position controller Unit: [increments]	UDINT	RW	0x0 (0_{dec})
64	Commutation type	Possible values: • 5_{dec}: Sensorless FOC with forced startup	USINT	RW	0x5 (5_{dec})
6D	Torque feed forward gain	Internal torque feedforward: scaling factor	UDINT	RW	0x0 (0_{dec})
6E	Torque feed forward filter time	Internal torque feedforward: filter time. Unit: [0.1 ms]	UDINT	RW	0xA (10_{dec})
71	Error Code Options	Choice of diagnostic messages that are displayed in 0x6n3F “Error code” (PDO mapping possible) Possible values: • 1_{dec}: Display Errors • 3_{dec}: Display Errors Warnings • 7_{dec}: Display Errors Warnings Infos	USINT	RW	0x7 (7_{dec})
72	Stand still torque limitation	Output standstill holding current for sensorless control	UINT	RW	0x1F4 (500_{dec})
73	Acceleration limitation	Maximum acceleration (setpoint limit) Unit: [0.1 rad/s²]	UDINT	RW	0xF570 (62832_{dec})
79	Sensorless Startup Current Scaling	Motor starting current for sensorless control. The current configured here is output at low speeds (“forced startup” phase). Specified in parts per thousand of the rated motor current. I.e. 1000 = rated motor current	UINT	RW	0x2EE (750_{dec})
7A	Sensorless Stall Reaction	Reaction to a detected commutation error (Motor Stall) in sensorless control. Possible values: • 0_{dec}: Stop motor with drive error • 1_{dec}: Restart motor • 255_{dec}: Disable Stall Monitoring	USINT	RW	0x0 (0_{dec})

Index 2n03 Motor Settings Ch.x

- Index 2003: Motor Settings Ch.1
- Index 2803: Motor Settings Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Motor Settings Ch.x		USINT	RO	0x34 (52_{dec})
11	Max current	Peak current Unit: [mA]	UDINT	RW	0x445C (17500_{dec})
13	Motor pole pairs	Number of pole pairs	USINT	RW	0x1 (1_{dec})
16	Torque constant	Torque constant Unit: [mNm/A]	UDINT	RW	0x12C (300_{dec})
18	Rotor moment of inertia	Motor moment of inertia Unit: [g cm²]	UDINT	RW	0x1EF (495_{dec})
19	Winding inductance	Winding inductance Unit: [0.1 mH]	UINT	RW	0x186 (390_{dec})
29	Motor I2T warn level	I²t model warning threshold Unit: [%]	USINT	RW	0x50 (80_{dec})
2A	Motor I2T error level	I²t model error threshold Unit: [%]	USINT	RW	0x69 (105_{dec})
2D	Motor thermal time constant	Thermal time constant Unit: [0.1 s]	UINT	RW	0x28 (40_{dec})
2E	Rated speed	Rated speed Unit: [rpm]	UDINT	RW	0x3E8 (1000_{dec})
30	Winding resistance	Winding resistance Unit: [mOhm]	UDINT	RW	0x578 (1400_{dec})
31	Voltage constant	Motor back-EMF voltage constant Unit: [µV/(1/min)]	UDINT	RW	0x4E20 (20000_{dec})
34	Configured motor current	Limits the output current. (The output current is limited to the lower of "Rated current" and "Configured motor current".) This parameter allows you to prevent the channel from drawing a disproportionately large share of the available U_P total current relative to the other channels.	UDINT	RW	0x1618 (5656_{dec})

2n04 Brake Settings Ch.x

- Index 2004: Brake Settings Ch.1
- Index 2804: Brake Settings Ch.2

Subindex (hex)	Name	Meaning	Data Type	Flags	Default
0	Brake Settings Ch.x		USINT	RO	0x18 (24_{dec})
01	Enable manual override	Enable for manual control of the holding brake	BOOL	RW	00
02	Manual brake state	Possible values: • 0_{dec}: Release • 1_{dec}: Apply	BOOL	RW	00
05	Brake option	Configuration for inverted motor brakes Possible values: • 0_{dec}: Enable output to release brake • 1_{dec}: Disable output to release brake	USINT	RW	0x0 (0_{dec})
09	External override	Choice of a digital input that can be used to open the motor brake independently of the drive controller, e.g. for maintenance. Possible values: • 0_{dec}: Disabled • 2_{dec}: Digital Input 1 • 3_{dec}: Digital Input 1 (only INIT/PREOP/SAFEOP) • 4_{dec}: Digital Input 2 • 5_{dec}: Digital Input 2 (only INIT/PREOP/SAFEOP)	USINT	RW	0x0 (0_{dec})
11	Release delay	Time the holding brake requires for opening (releasing) after the current was applied. Unit: [ms]	UINT	RW	0x0 (0_{dec})
12	Application delay	Time the holding brake requires for closing (holding) after the current was switched off. Unit: [ms]	UINT	RW	0x0 (0_{dec})
13	Emergency application timeout	Time that the amplifier waits for the velocity to reach the standstill limit after a stop request. If the waiting time is exceeded, the holding brake is triggered; regardless of the velocity. Note: This parameter must be set at least to the longest time the axis needs to come to a standstill after it has been switched torque-free. For vertical axes, this parameter should be set to a low value to prevent the axis or load from falling very far. Unit: [ms]	UINT	RW	0x0 (0_{dec})
14	Brake moment of inertia	Moment of inertia of the brake. Unit: [g cm²]	UINT	RW	0x0 (0_{dec})
18	Brake Output Features	Control of a motor brake (depending on the drive controller) via a digital output Possible values: • 0_{dec}: Disabled • 1_{dec}: Use Digital Output 1 as additional brake output • 2_{dec}: Use Digital Output 2 as additional brake output	USINT	RW	0x0 (0_{dec})

10	Low pass frequency 1	Unit: [Hz]	REAL	RW	0.0
11	Low pass damping 1		REAL	RW	0.0
12	High pass frequency 1	Unit: [Hz]	REAL	RW	0.0
13	High pass damping 1		REAL	RW	0.0
14	Filter type 1	Possible values: • 0_{dec}: No_Filter • 1_{dec}: Low_pass_filter_1_order • 2_{dec}: Phase_correction_filter_1_order • 3_{dec}: Low_pass_filter_2_order • 4_{dec}: Phase_correction_filter_2_order • 5_{dec}: Notch_filter	INT	RW	0x0 (0_{dec})
15	Low pass frequency 2	Unit: [Hz]	REAL	RW	0.0
16	Low pass damping 2		REAL	RW	0.0
17	High pass frequency 2	Unit: [Hz]	REAL	RW	0.0
18	High pass damping 2		REAL	RW	0.0
19	Filter type 2	Possible values: • 0_{dec}: No_Filter • 1_{dec}: Low_pass_filter_1_order • 2_{dec}: Phase_correction_filter_1_order • 3_{dec}: Low_pass_filter_2_order • 4_{dec}: Phase_correction_filter_2_order • 5_{dec}: Notch_filter	INT	RW	0x0 (0_{dec})

Index 2n0A Digital Output Settings Ch.x

- Index 200A: Digital Output Settings Ch.1
- Index 280A: Digital Output Settings Ch.2

Subindex (hex)	Name	Meaning	Data Type	Flags	Default
0	Digital Output Settings Ch.x		USINT	RO	0x2 (2_{dec})
01	Use Output 1 as +24V power supply	If “TRUE”: The respective digital output is always active and serves as supply voltage, e.g. for limit switches	BOOL	RW	00
02	Use Output 2 as +24V power supply		BOOL	RW	00

Index 2n10 Feedback Settings Ch.x

- Index 2010: Feedback Settings Ch.1
- Index 2810: Feedback Settings Ch.2

Subindex (hex)	Name	Meaning	Data Type	Flags	Default
0	Feedback Settings Ch.1		USINT	RO	0x17 (23_{dec})
11	Device type		UDINT	RW	0x0 (0_{dec})
12	Singleturn bits	Number of single-turn bits used to represent the position in the process image. The sum of the single-turn bits and multi-turn bits must be 32.	USINT	RW	0x14 (20_{dec})
13	Multiturn bits	Number of multi-turn bits used to represent the position in the process image. The sum of the single-turn bits and multi-turn bits must be 32.	USINT	RW	0xC (12_{dec})
14	Observer bandwidth	Bandwidth of the velocity observer in [Hz]	UINT	RW	0xC8 (200_{dec})
15	Observer feed-forward	Load ratio in [%] between internal rotor inertia of the motor and the total inertia of the driven system. Load ratio = internal moment of inertia / (internal moment of inertia + mass moment of inertia of the load). Examples: 100 % = load-free 50 % = moments of inertia of input and output are equal	USINT	RW	0x64 (100_{dec})
17	Position offset	The position offset is subtracted from the raw position of the encoder. It can only be written with the axis stopped.	DINT	RW	0x0 (0_{dec})

Index 2n20 Vendor data Ch.x

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Controlword Ch.x	Bit 0: Switch on Bit 1: Enable voltage Bit 2: reserved Bit 3: Enable operation Bit 4 - 6: reserved Bit 7: Fault reset Bit 8 - 15: reserved	UINT	RO	-

Index 6n41 Statusword Ch.x

- Index 6041: Statusword Ch.1
- Index 6841: Statusword Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Statusword Ch.x	Bit 0: Ready to switch on Bit 1: Switched on Bit 2: Operation enabled Bit 3: Fault Bit 4: reserved Bit 5: reserved Bit 6: Switch on disabled Bit 7: Warning Bit 8 + 9: reserved Bit 10: TxPDOToggle Bit 11: Internal limit active Bit 12: Drive follows the command value Bit 13: Input cycle counter Bit 14 - 15: reserved	UINT	RO	-

Index 6n5E Fault reaction option code Ch.x

- Index 605E: Fault reaction option code Ch.1
- Index 685E: Fault reaction option code Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Fault reaction option code Ch.x	Possible values: • 0: Disable drive function, motor is free to rotate • 1: Slow down on slow down ramp	UINT	RO	0x0001 (1_{dec})

Index 6n60 Modes of operation Ch.x

- Index 6060: Modes of operation Ch.1
- Index 6860: Modes of operation Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Modes of operation Ch.x	Possible values: • -125_{dec}: Drive Motion Control (DMC) • -9_{dec}: Cyclic synchronous velocity mode remote (CSVr) • 8_{dec}: Cyclic synchronous position mode (CSP) • 9_{dec}: Cyclic synchronous velocity mode (CSV) • 11_{dec}: Cyclic synchronous torque mode with commutation angle (CSTCA)	SINT	RO	0x08 (8_{dec})

Index 6n61 Modes of operation display Ch.x

- Index 6061: Modes of operation display Ch.1
- Index 6861: Modes of operation display Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Modes of operation display Ch.x	Possible values: • -125_{dec}: Drive Motion Control (DMC) • -9_{dec}: Cyclic synchronous velocity mode remote (CSVr) • 8_{dec}: Cyclic synchronous position mode (CSP) • 9_{dec}: Cyclic synchronous velocity mode (CSV) • 11_{dec}: Cyclic synchronous torque mode with commutation angle (CSTCA)	USINT	RO	-

Index 6n64 Position actual value Ch.x

- Index 6064: Position actual value Ch.1
- Index 6864: Position actual value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Position actual value Ch.x	Actual position 2^{20} increments correspond to one motor revolution	DINT	RO	-

Index 6n65 Following error window Ch.x

- Index 6065: Following error window Ch.1
- Index 6865: Following error window Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Following error window Ch.x	Following error window The specified value must be multiplied by the corresponding scaling factor • 0xFFFFFFFF (-1_{dec}) = Following error monitoring off. • Any other value = following error monitoring on	UDINT	RO	0xFFFFFFFF (-1_{dec})

Index 6n66 Following error time out Ch.x

- Index 6066: Following error time out Ch.1
- Index 6866: Following error time out Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Following error time out Ch.x	Following error monitoring timeout Unit: [ms] If the following error exceeds the following-error window for longer than the timeout set here, the system triggers an error response.	UINT	RO	-

Index 6n6C Velocity actual value Ch.x

- Index 606C: Velocity actual value Ch.1
- Index 686C: Velocity actual value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Velocity actual value Ch.x	Actual velocity 2^{32}/16000 increments correspond to one motor revolution per second	DINT	RO	-

Index 6n7B Position range limit Ch.x

- Index 607B: Position range limit Ch.1
- Index 687B: Position range limit Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Position range limit Ch.x		USINT	RO	0x2 (2_{dec})
01	Min position range limit	Minimum value for the position display of setpoints and actual values. If the value falls below this limit, it underflows to "Max position range limit" "Min position range limit" must always be lower than "Max position range limit"	DINT	RW	0x80000000 (-2147483648_{dec})
02	Max position range limit	Maximum value for the position display of setpoints and actual values. If this limit is exceeded, the value overflows to "Min position range limit" "Max position range limit" must always be greater than "Min position range limit"	DINT	RW	0x7FFFFFFF (2147483647_{dec})

Index 6n71 Target torque Ch.x

- Index 6071: Target torque Ch.1
- Index 6871: Target torque Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Target torque Ch.x	Configured target torque The value is specified in thousandths (1/1000) of parameter 6075 "Motor rated current" Calculation formula: M = ((Torque actual value / 1000) × rated current)) × torque constant (0x2003:16)	INT	RO	-

Index 6n72 Max torque Ch.x

- Index 6072: Max torque Ch.1
- Index 6872: Max torque Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Max torque Ch.x	Maximum torque	UINT	RO	-

Index 6n75 Motor rated current Ch.x

- Index 6075: Motor rated current Ch.1
- Index 6875: Motor rated current Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Motor rated current Ch.x	Nominal current of the motor Unit: [mA]	UDINT	RO	-

Index 6n77 Torque actual value Ch.x

- Index 6077: Torque actual value Ch.1
- Index 6877: Torque actual value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Torque actual value Ch.x	Actual torque The value is specified in thousandths (1/1000) of parameter 6075 "Motor rated current" Calculation formula: M = ((Torque actual value / 1000) × rated current)) × torque constant (0x2003:16)	INT	RO	-

Index 6n79 DC link circuit voltage Ch.x

- Index 6079: DC link circuit voltage Ch.1
- Index 6879: DC link circuit voltage Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	DC link circuit voltage Ch.x	Measured value of the DC link voltage Unit: [mV]	UDINT	RO	-

Index 6n7A Target position Ch.x

- Index 607A Target position Ch.1
- Index 687A Target position Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Target position Ch.x	Configured actual position 2^{20} increments correspond to one motor revolution	DINT	RO	-

Index 6n7E Polarity Ch.x

- Index 607E: Polarity Ch.1
- Index 687E: Polarity Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Polarity Ch.x	Possible values: • 0: global polarity inversion disabled • 1: global polarity inversion	USINT	RO	0

Index 6n80 Max motor speed Ch.x

- Index 6080: Max motor speed Ch.1
- Index 6880: Max motor speed Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Max motor speed Ch.x	Maximum velocity of the motor Unit: [1/min]	UDINT	RO	0x000186A0 (100000_{dec})

Index 6n91 Gear ratio Ch.x

- Index 6091: Gear ratio Ch.1
- Index 6891: Gear ratio Ch.2

Subindex (hex)	Name	Meaning	Data Type	Flags	Default
0	Gear ratio Ch.x		USINT	RO	0x2 (2_{dec})
01	Motor shaft revolutions	These parameters are used to scale all positions and velocities from the motor side to the load side of a gear unit. "Motor shaft revolutions" describes the number of motor revolutions required to achieve the number of load revolutions configured in "Driving shaft revolutions". Example: For a reduction gear in which 5 motor revolutions result in 2 load revolutions, set the parameters as follows: • Motor shaft revolutions = 5 • Driving shaft revolutions = 2	UDINT	RW	0x1 (1_{dec})
02	Driving shaft revolutions		UDINT	RW	0x1 (1_{dec})

Index 6nB1 Velocity offset Ch.x

- Index 60B1: Velocity offset Ch.1
- Index 68B1: Velocity offset Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Velocity offset Ch.x	External velocity feedforward	DINT	RO	-

Index 6nB2 Torque offset Ch.x

- Index 60B2: Torque offset Ch.1
- Index 68B2: Torque offset Ch.2

Index (hex)	Name	Meaning	Data type	Flags	Default
0	Torque offset Ch.x	External torque feedforward The value is specified in thousandths (1/1000) of parameter 6075 "Motor rated current" Calculation formula: M = ((Torque actual value / 1000) × rated current)) × torque constant (0x2003:16)	INT	RO	-

Index 6nB8 Touch probe function Ch.x

- Index 60B8 Touch probe function Ch.1
- Index 68B8 Touch probe function Ch.2

Index (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe function Ch.x	• Bit 0: TP1 enable • Bit 1: TP1 Continous • Bit 2: TP1 Trigger mode • Bit 3: - • Bit 4: TP1 Enable pos. Edge • Bit 5: TP1 Enable neg. edge • Bit 6: - • Bit 7: - • Bit 8: TP2 Enable • Bit 9: TP2 Continous • Bit 10: TP2 Trigger mode • Bit 11: - • Bit 12: TP2 Enable pos. Edge • Bit 13: TP2 Enable neg. edge • Bit 14: - • Bit 15: -	UINT	RO	-

Index 6nB9 Touch probe status Ch.x

- Index 60B9 Touch probe status Ch.1
- Index 68B9 Touch probe status Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe status Ch.x	• Bit 0: TP1 Enable • Bit 1: TP1 Pos. value stored • Bit 2: TP1 Input • Bit 7: TP1 Input • Bit 8: TP2 Enable • Bit 9: TP2 Pos. value stored • Bit 10: TP2 Neg. value stored • Bit 15: TP2 Input	UINT	RO	-

Index 6nBA Touch probe 1 positive edge Ch.x

- Index 60BA Touch probe 1 positive edge Ch.1
- Index 68BA Touch probe 1 positive edge Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe 1 positive edge Ch.x	Position value at the last detected rising edge of TP1. 2^{20} increments correspond to one motor revolution	DINT	RO	-

Index 6nBB Touch probe 1 negative edge Ch.x

- Index 60BB Touch probe 1 negative edge Ch.1
- Index 68BB Touch probe 1 negative edge Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe 1 negative edge Ch.x	Position value at the last detected rising edge of TP1. 2^{20} increments correspond to one motor revolution	DINT	RO	-

Index 6nBC Touch probe 2 positive edge Ch.x

- Index 60BC Touch probe 2 positive edge Ch.1
- Index 68BC Touch probe 2 positive edge Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe 2 positive edge Ch.x	Position value at the last detected rising edge of TP2. 2^{20} increments correspond to one motor revolution	DINT	RO	-

Index 6nBD Touch probe 2 negative edge Ch.x

- Index 60BD: Touch probe 2 negative edge Ch.1
- Index 68BD: Touch probe 2 negative edge Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe 2 negative edge Ch.x	Position value at the last detected falling edge of TP2. 2^{20} increments correspond to one motor revolution	DINT	RO	-

6nD0 Touch probe source Ch.x

- 60D0 Touch probe source Ch.1
- 68D0 Touch probe source Ch.2

Subindex (hex)	Name	Meaning	Data Type	Flags	Default
0	Touch probe source Ch.x		USINT	RO	0x2 (2_{dec})
01	Touch probe 1 source	Possible values: • 1_{dec}: Touch probe input 1	INT	RW	0x1 (1_{dec})
02	Touch probe 2 source	Possible values: • 2_{dec}: Touch probe input 2	INT	RW	0x2 (2_{dec})

Index 6nD1 Touch probe time stamp 1 positive value Ch.x

- Index 60D1: Touch probe time stamp 1 positive value Ch.1
- Index 68D1: Touch probe time stamp 1 positive value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe time stamp 1 positive value Ch.x	Position value at the last detected rising edge of TP1	UDINT	RO	-

Index 6nD2 Touch probe time stamp 1 negative value Ch.x

- Index 60D2: Touch probe time stamp 1 negative value Ch.1
- Index 68D2: Touch probe time stamp 1 negative value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe time stamp 1 negative value Ch.x	Position value at the last detected falling edge of TP1	UDINT	RO	-

Index 6nD3 Touch probe time stamp 2 positive value Ch.x

- Index 60D3: Touch probe time stamp 2 positive value Ch.1
- Index 68D3: Touch probe time stamp 2 positive value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe time stamp 2 positive value Ch.x	Position value at the last detected rising edge of TP2	UDINT	RO	-

Index 6nD4 Touch probe time stamp 2 negative value Ch.x

- Index 60D4: Touch probe time stamp 2 negative value Ch.1

- Index 68D4: Touch probe time stamp 2 negative value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Touch probe time stamp 2 negative value Ch.x	Position value at the last detected falling edge of TP2	UDINT	RO	-

Index 6nD9 Supported synchronization functions Ch.x

- Index 60D9: Supported synchronization functions Ch.1
- Index 68D9: Supported synchronization functions Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Supported synchronization functions Ch.x		UDINT	RO	0x0000003 (3_{dec})

Index 6nDA Synchronization function settings Ch.x

- Index 60DA: Synchronization function settings Ch.1
- Index 68DA: Synchronization function settings Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Synchronization function settings Ch.x	-	UDINT	RO	-

Index 6nE0 Positive torque limit value Ch.x

- Index 60E0: Positive torque limit value Ch.1
- Index 68E0: Positive torque limit value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Positive torque limit value Ch.x	Torque limit in the positive direction of rotation	UINT	RO	0x7FFF (32767_{dec})

Index 6nE1 Negative torque limit value Ch.x

- Index 60E1: Negative torque limit value Ch.1
- Index 68E1: Negative torque limit value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Negative torque limit value Ch.1	Torque limit in the negative direction of rotation	UINT	RO	0x7FFF (32767_{dec})

Index 6nEA Commutation angle Ch.x

- Index 60EA: Commutation angle Ch.1
- Index 68EA: Commutation angle Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Commutation angle Ch.x	Commutation angle for the CSTCA operating mode Unit: 2^{16} / 360°	UINT	RO	-

Index 6nF4 Following error actual value Ch.x

- Index 60F4: Following error actual value Ch.1
- Index 68F4: Following error actual value Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Following error actual value Ch.x	Current following error	DINT	RO	-

Index 6nFD Digital Inputs Ch.x

- Index 60FD: Digital Inputs Ch.1
- Index 68FD: Digital Inputs Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Digital Inputs Ch.x	-	UDINT	RO	-

Index 6nFE Digital Outputs Ch.x

- Index 60FE: Digital Outputs Ch.1
- Index 68FE: Digital Outputs Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Digital Outputs Ch.x		USINT	RO	0x1 (1_{dec})
01	Digital Outputs	Controls the digital outputs of the digital combination channels: • DIO1: Bit 16 (0x00010000) • DIO2: Bit 17 (0x00020000)	UDINT	RW	0x0 (0_{dec})

Index 6nFF Target velocity Ch.x

- Index 60FF: Target velocity Ch.1
- Index 68FF: Target velocity Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Target velocity Ch.x	Configured actual velocity 2^{32}/16000 increments correspond to one motor revolution per second	DINT	RO	-

Index 6n02 Supported drive modes Ch.x

- Index 6502: Supported drive modes Ch.1
- Index 6D02: Supported drive modes Ch.2

Subindex (hex)	Name	Meaning	Data type	Flags	Default
0	Supported drive modes Ch.x	Specification of the supported operating modes: • Bit 0: PP • Bit 1: VL • Bit 2: PV • Bit 3: TQ • Bit 4: R • Bit 5: HM • Bit 6: IP • Bit 7: CSP • Bit 8: CSV • Bit 9: CST • Bit 10: CSTCA • Bit 11…15: reserved • Bit 16…31: Manufacturer-specific	UDINT	RO	0x00000580 (1408_{dec})

5.4 Standard objects

1000 Device type

Index (hex)	Name	Meaning	Data type	Flags	Default
1000:0	Device type	EtherCAT slave device type: the low word contains the CoE profile used (402_{dec}).	UDINT	RO	0x00020192 (131474_{dec})

1001 Error register

Index (hex)	Name	Meaning	Data Type	Flags	Default
1001:0	Error register	-	USINT	RO	-

1008 Device name

Index (hex)	Name	Meaning	Data Type	Flags	Default
1008:0	Device name	Device name of the EtherCAT slave	STRING(19)	RO	-

1009 Hardware version

Index (hex)	Name	Meaning	Data Type	Flags	Default
1009:0	Hardware version	Hardware version of the EtherCAT slave	STRING(2)	RO	-

100A Software version

Index (hex)	Name	Meaning	Data Type	Flags	Default
100A:0	Software version	Firmware version of the EtherCAT slave	STRING(2)	RO	-

100B Bootloader version

Index (hex)	Name	Meaning	Data Type	Flags	Default
100B:0	Bootloader version	-	STRING(32)	RO	-

1011 Restore default parameters

Index (hex)	Name	Meaning	Data Type	Flags	Default
1011:0	Restore default parameters	Restoring the default parameters	USINT	RO	0x1 (1_{dec})

1018 Identity

Index (hex)	Name	Meaning	Data Type	Flags	Default
1018:0	Identity	Information for identifying the slave	USINT	RO	0x4 (4_{dec})
1018:01	Vendor ID	Vendor ID of the EtherCAT slave	UDINT	RO	0x2 (2_{dec})
1018:02	Product code	Product code of the EtherCAT slave	UDINT	RO	0x1CF44052 (485769298_{dec})
1018:03	Revision	Revision number of the EtherCAT slave; the Low Word (bit 0-15) indicates the special terminal number, the High Word (bit 16-31) refers to the device description	UDINT	RO	-
1018:04	Serial number	Serial number of the EtherCAT slave; the low byte (bit 0-7) of the low word contains the year of production, the high byte (bit 8-15) of the low word contains the week of production, the high word (bit 16-31) is 0	UDINT	RO	-

1020 Device Statistics

Index (hex)	Name	Meaning	Data Type	Flags	Default
1020:0	Device Statistics		USINT	RO	0x3 (3_{dec})
1020:01	Time since power on	Operating time since last power-on [s]	UDINT	RO	-
1020:02	Total time powered	Total operating time [s]	UDINT	RO	-
1020:03	Number of power cycles	Number of power cycles	UDINT	RO	-

10E2 Manufacturer-specific Identification Code

Index (hex)	Name	Meaning	Data Type	Flags	Default
10E2:0	Manufacturer-specific Identification Code	eBIC	USINT	RO	0x1 (1_{dec})

10F0 Backup parameter handling

Index (hex)	Name	Meaning	Data Type	Flags	Default
10F0:0	Backup parameter handling		USINT	RO	0x1 (1_{dec})
10F0:01	Checksum	Checksum across all backup entries of the EtherCAT slave	UDINT	RO	-

10F3 Diagnosis History

Index (hex)	Name	Meaning	Data Type	Flags	Default
10F3:0	Diagnosis History		USINT	RO	0x37 (55_{dec})
10F3:01	Maximum Messages	Maximum number of stored messages	USINT	RO	-
10F3:02	Newest Message	Subindex of the newest message	USINT	RO	-
10F3:03	Newest Acknowledged Message	Subindex of the last acknowledged message	USINT	RW	-
10F3:04	New Messages Available	Indicates that a new message is available	BOOL	RO	-
10F3:05	Flags	-	UINT	RW	-
10F3:06	Diagnosis Message 001	-	ARRAY [0..31] OF BYTE	RO	-
10F3:07	Diagnosis Message 002	-	ARRAY [0..31] OF BYTE	RO	-
10F3:08	Diagnosis Message 003	-	ARRAY [0..31] OF BYTE	RO	-
…	…	…	…	…	…
10F3:35	Diagnosis Message 048	-	ARRAY [0..31] OF BYTE	RO	-
10F3:36	Diagnosis Message 049	-	ARRAY [0..31] OF BYTE	RO	-
10F3:37	Diagnosis Message 050	-	ARRAY [0..31] OF BYTE	RO	-

10F8 Timestamp Object

Index (hex)	Name	Meaning	Data Type	Flags	Default
10F8:0	Timestamp Object	-	ULINT	RO	-

1460 DS402 RxPDO-Par Outputs Ch.1

Index (hex)	Name	Meaning	Data Type	Flags	Default
1460:0	DS402 RxPDO-Par Outputs Ch.1		USINT	RO	0x6 (6_{dec})
1460:06	Exclude RxPDOs		ARRAY [0..1] OF BYTE	RO	[6116]

1461 DS402 RxPDO-Par Outputs 32 Bit Ch.1

Index (hex)	Name	Meaning	Data Type	Flags	Default
1461:0	DS402 RxPDO-Par Outputs 32 Bit Ch.1		USINT	RO	0x6 (6_{dec})
1461:06	Exclude RxPDOs		ARRAY [0..1] OF BYTE	RO	[6016]

14E0 DS402 RxPDO-Par Outputs Ch.2

Index (hex)	Name	Meaning	Data Type	Flags	Default
14E0:0	DS402 RxPDO-Par Outputs Ch.2		USINT	RO	0x6 (6_{dec})
14E0:06	Exclude RxPDOs		ARRAY [0..1] OF BYTE	RO	[e116]

14E1 DS402 RxPDO-Par Outputs 32 Bit Ch.2

Index (hex)	Name	Meaning	Data Type	Flags	Default
14E1:0	DS402 RxPDO-Par Outputs 32 Bit Ch.2		USINT	RO	0x6 (6_{dec})
14E1:06	Exclude RxPDOs		ARRAY [0..1] OF BYTE	RO	[e016]

1600 DS402 RxPDO-Map Controlword Ch.1

Index (hex)	Name	Meaning	Data Type	Flags	Default
1600:0	DS402 RxPDO-Map Controlword Ch.1		USINT	RO	0x1 (1_{dec})
1600:01	SubIndex 001		UDINT	RO	0x6040:00, 16

6 Appendix

6.1 General operating conditions

Protection rating according to IP code

The degrees of protection are defined and divided into different classes in the IEC 60529 standard (EN 60529). Degrees of protection are designated by the letters "IP" and two numerals: **IPxy**

- Numeral x: Dust protection and contact protection
- Numeral y: Protection against water

x	Meaning
0	Not protected
1	Protected against access to dangerous parts with the back of the hand. Protected against solid foreign objects of 50 mm Ø
2	Protected against access to dangerous parts with a finger. Protected against solid foreign objects of 12.5 mm Ø
3	Protected against access to dangerous parts with a tool. Protected against solid foreign objects of 2.5 mm Ø
4	Protected against access to dangerous parts with a wire. Protected against solid foreign objects of 1 mm Ø
5	Protection against access to dangerous parts with a wire. Dust-protected. Ingress of dust is not prevented completely, although the quantity of dust able to penetrate is limited to such an extent that the proper function of the device and safety are not impaired
6	Protection against access to dangerous parts with a wire. Dust-tight. No ingress of dust

y	Meaning
0	Not protected
1	Protection against vertically falling water drops
2	Protection against vertically falling water drops when enclosure tilted up to 15°
3	Protection against spraying water. Water sprayed at an angle of up to 60° on either side of the vertical shall have no harmful effects
4	Protection against splashing water. Water splashed against the enclosure from any direction shall have no harmful effects
5	Protection against water jets.
6	Protection against powerful water jets.
7	Protected against the effects of temporary immersion in water. Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is immersed in water at a depth of 1 m for 30 minutes

Chemical resistance

The resistance refers to the housing of the IP67 modules and the metal parts used. In the table below you will find some typical resistances.

Type	Resistance
Water vapor	unstable at temperatures > 100 °C
Sodium hydroxide solution (ph value > 12)	stable at room temperature unstable > 40 °C
Acetic acid	unstable
Argon (technically pure)	stable

Key

- resistant: Lifetime several months
- non inherently resistant: Lifetime several weeks
- not resistant: Lifetime several hours resp. early decomposition

6.2 Version identification of EtherCAT devices

6.2.1 General notes on marking

Designation

A Beckhoff EtherCAT device has a 14-digit designation, made up of

- family key
- type
- version
- revision

Example	Family	Type	Version	Revision
EL3314-0000-0016	EL terminal 12 mm, non-pluggable connection level	3314 4-channel thermocouple terminal	0000 basic type	0016
ES3602-0010-0017	ES terminal 12 mm, pluggable connection level	3602 2-channel voltage measurement	0010 high-precision version	0017
CU2008-0000-0000	CU device	2008 8-port fast ethernet switch	0000 basic type	0000

Notes

- The elements mentioned above result in the **technical designation**. EL3314-0000-0016 is used in the example below.
- EL3314-0000 is the order identifier, in the case of “-0000” usually abbreviated to EL3314. “-0016” is the EtherCAT revision.
- The **order identifier** is made up of
  - family key (EL, EP, CU, ES, KL, CX, etc.)
  - type (3314)
  - version (-0000)
- The **revision** -0016 shows the technical progress, such as the extension of features with regard to the EtherCAT communication, and is managed by Beckhoff.
  In principle, a device with a higher revision can replace a device with a lower revision, unless specified otherwise, e.g. in the documentation.
  Associated and synonymous with each revision there is usually a description (ESI, EtherCAT Slave Information) in the form of an XML file, which is available for download from the Beckhoff web site.
  From 2014/01 the revision is shown on the outside of the IP20 terminals, see Fig. *“EL2872 with revision 0022 and serial number 01200815”*.
- The type, version and revision are read as decimal numbers, even if they are technically saved in hexadecimal.

6.2.2 Version identification of IP67 modules

The serial number/ data code for Beckhoff IO devices is usually the 8-digit number printed on the device or on a sticker. The serial number indicates the configuration in delivery state and therefore refers to a whole production batch, without distinguishing the individual modules of a batch.

Structure of the serial number: **KK YY FF HH**	Example with serial number 12 06 3A 02:
KK - week of production (CW, calendar week)	12 - production week 12
YY - year of production	06 - production year 2006
FF - firmware version	3A - firmware version 3A
HH - hardware version	02 - hardware version 02

Exceptions can occur in the **IP67 area**, where the following syntax can be used (see respective device documentation):

Syntax: D ww yy x y z u

D - prefix designation
ww - calendar week
yy - year
x - firmware version of the bus PCB
y - hardware version of the bus PCB
z - firmware version of the I/O PCB
u - hardware version of the I/O PCB

Example: D.22081501 calendar week 22 of the year 2008 firmware version of bus PCB: 1 hardware version of bus PCB: 5 firmware version of I/O PCB: 0 (no firmware necessary for this PCB) hardware version of I/O PCB: 1

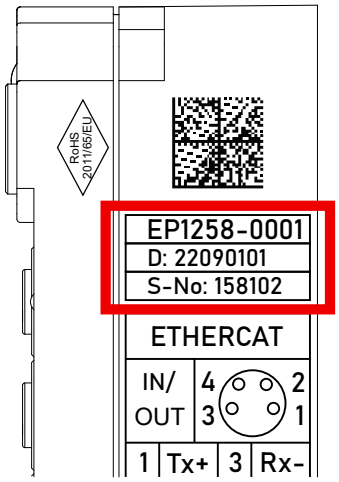

Fig. 1: EP1258-00001 IP67 EtherCAT Box with batch number/DateCode 22090101 and unique serial number 158102

6.2.3 Beckhoff Identification Code (BIC)

The Beckhoff Identification Code (BIC) is increasingly being applied to Beckhoff products to uniquely identify the product. The BIC is represented as a Data Matrix Code (DMC, code scheme ECC200), the content is based on the ANSI standard MH10.8.2-2016.

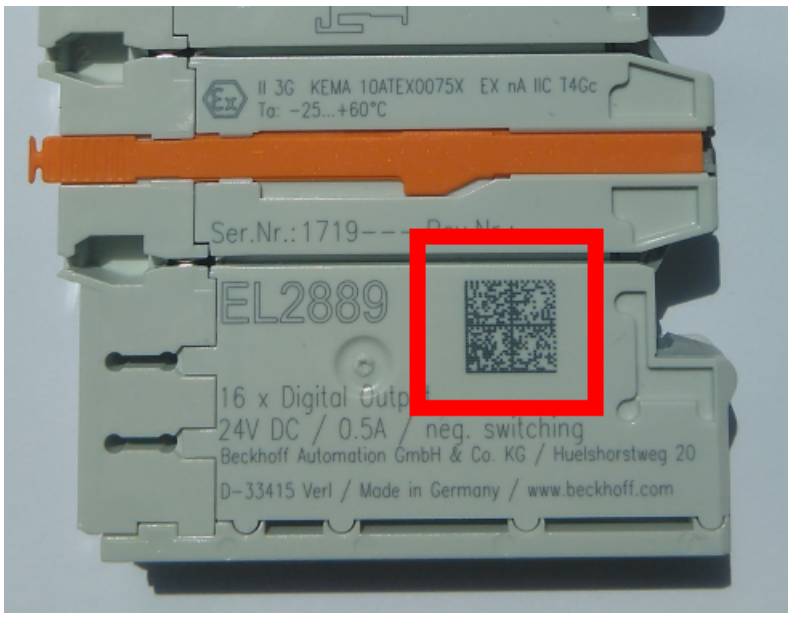

Fig. 2: BIC as data matrix code (DMC, code scheme ECC200)

The BIC will be introduced step by step across all product groups.

Depending on the product, it can be found in the following places:

- on the packaging unit
- directly on the product (if space suffices)
- on the packaging unit and the product

The BIC is machine-readable and contains information that can also be used by the customer for handling and product management.

Each piece of information can be uniquely identified using the so-called data identifier (ANSI MH10.8.2-2016). The data identifier is followed by a character string. Both together have a maximum length according to the table below. If the information is shorter, spaces are added to it.

Following information is possible, positions 1 to 4 are always present, the other according to need of production:

Posi-tion	Type of information	Explanation	Data identifier	Number of digits incl. data identifier	Example
1	Beckhoff order number	**Beckhoff order number**	1P	8	**1P**072222
2	Beckhoff Traceability Number (BTN)	**Unique serial number, see note below**	SBTN	12	**SBTN**k4p562d7
3	Article description	**Beckhoff article description, e.g. EL1008**	1K	32	**1K**EL1809
4	Quantity	**Quantity in packaging unit, e.g. 1, 10, etc.**	Q	6	**Q**1
5	Batch number	Optional: Year and week of production	2P	14	**2P**401503180016
6	ID/serial number	Optional: Present-day serial number system, e.g. with safety products	51S	12	**51S**678294
7	Variant number	Optional: Product variant number on the basis of standard products	30P	12	**30P**F971, 2*K183
...					

Further types of information and data identifiers are used by Beckhoff and serve internal processes.

Structure of the BIC

Example of composite information from positions 1 to 4 and with the above given example value on position 6. The data identifiers are highlighted in bold font:

1P072222**SBTN**k4p562d7**1K**EL1809 **Q**1 **51S**678294

Accordingly as DMC:

Fig. 3: Example DMC **1P**072222**SBTN**k4p562d7**1K**EL1809 **Q**1 **51S**678294

BTN

An important component of the BIC is the Beckhoff Traceability Number (BTN, position 2). The BTN is a unique serial number consisting of eight characters that will replace all other serial number systems at Beckhoff in the long term (e.g. batch designations on IO components, previous serial number range for safety products, etc.). The BTN will also be introduced step by step, so it may happen that the BTN is not yet coded in the BIC.

NOTICE

This information has been carefully prepared. However, the procedure described is constantly being further developed. We reserve the right to revise and change procedures and documentation at any time and without prior notice. No claims for changes can be made from the information, illustrations and descriptions in this documentation.

6.2.4 Electronic access to the BIC (eBIC)

Electronic BIC (eBIC)

The Beckhoff Identification Code (BIC) is applied to the outside of Beckhoff products in a visible place. If possible, it should also be electronically readable.

The interface that the product can be electronically addressed by is crucial for the electronic readout.

EtherCAT devices (IP20, IP67)

All Beckhoff EtherCAT devices have an ESI-EEPROM which contains the EtherCAT identity with the revision number. The EtherCAT slave information, also colloquially known as the ESI/XML configuration file for the EtherCAT master, is stored in it. See the corresponding chapter in the EtherCAT system manual (Link) for the relationships.

Beckhoff also stores the eBIC in the ESI-EEPROM. The eBIC was introduced into Beckhoff IO production (terminals, box modules) in 2020; as of 2023, implementation is largely complete.

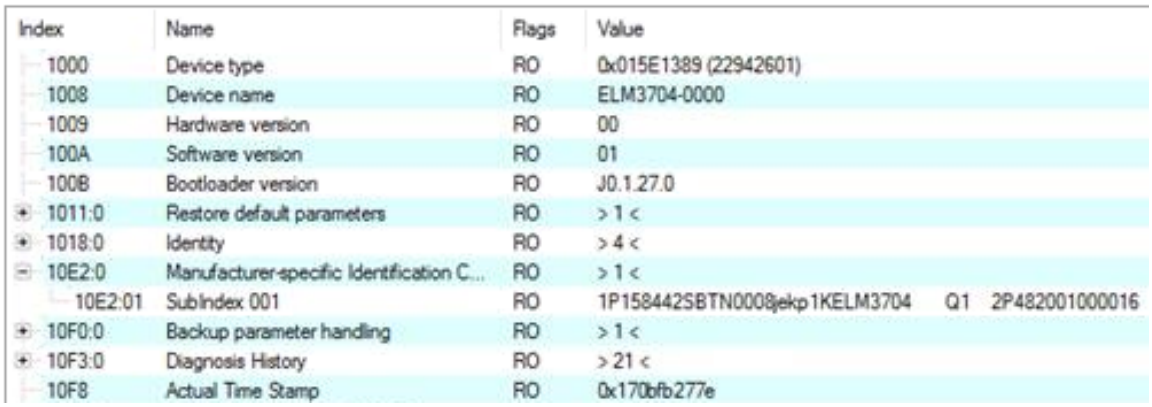
The user can electronically access the eBIC (if present) as follows:

- With all EtherCAT devices, the EtherCAT master (TwinCAT) can read the eBIC from the ESI-EEPROM
  - From TwinCAT 3.1 build 4024.11, the eBIC can be displayed in the online view.
  - To do this, check the "Show Beckhoff Identification Code (BIC)" checkbox under EtherCAT → Advanced Settings → Diagnostics:

  - The BTN and its contents are then displayed:

  - Note: As shown in the figure, the production data HW version, FW version, and production date, which have been programmed since 2012, can also be displayed with "Show production info".
  - Access from the PLC: From TwinCAT 3.1. build 4024.24, the functions *FB_EcReadBIC* and *FB_EcReadBTN* for reading into the PLC are available in the Tc2_EtherCAT library from v3.3.19.0.
- EtherCAT devices with a CoE directory may also have the object 0x10E2:01 to display their own eBIC, which can also be easily accessed by the PLC:

- The device must be in PREOP/SAFEOP/OP for access:



Index	Name	Flags	Value
1000	Device type	RO	0x015E1389 (22942601)
1008	Device name	RO	ELM3704-0000
1009	Hardware version	RO	00
100A	Software version	RO	01
100B	Bootloader version	RO	J0.1.27.0
1011:0	Restore default parameters	RO	> 1 <
1018:0	Identity	RO	> 4 <
10E2:0	Manufacturer-specific Identification C...	RO	> 1 <
10E2:01	SubIndex 001	RO	1P158442SBTN0008jekp1KELM3704 Q1 2P482001000016
10F0:0	Backup parameter handling	RO	> 1 <
10F3:0	Diagnosis History	RO	> 21 <
10F8	Actual Time Stamp	RO	0x170bfb277e

  - The object 0x10E2 will be preferentially introduced into stock products in the course of necessary firmware revision.
  - From TwinCAT 3.1. build 4024.24, the functions *FB_EcCoEReadBIC* and *FB_EcCoEReadBTN* for reading into the PLC are available in the Tc2_EtherCAT library from v3.3.19.0
- The following auxiliary functions are available for processing the BIC/BTN data in the PLC in *Tc2_Utilities* as of TwinCAT 3.1 build 4024.24
  - F_SplitBIC: The function splits the Beckhoff Identification Code (BIC) sBICValue into its components using known identifiers and returns the recognized substrings in the ST_SplittedBIC structure as a return value
  - BIC_TO_BTN: The function extracts the BTN from the BIC and returns it as a return value
- Note: If there is further electronic processing, the BTN is to be handled as a string(8); the identifier "SBTN" is not part of the BTN.
- Technical background
  The new BIC information is written as an additional category in the ESI-EEPROM during device production. The structure of the ESI content is largely dictated by the ETG specifications, therefore the additional vendor-specific content is stored using a category in accordance with the ETG.2010. ID 03 tells all EtherCAT masters that they may not overwrite these data in the event of an update or restore the data after an ESI update.
  The structure follows the content of the BIC, see here. The EEPROM therefore requires approx. 50..200 bytes of memory.
- Special cases
  - If multiple hierarchically arranged ESCs are installed in a device, only the top-level ESC carries the eBIC information.
  - If multiple non-hierarchically arranged ESCs are installed in a device, all ESCs carry the eBIC information.
  - If the device consists of several sub-devices which each have their own identity, but only the top-level device is accessible via EtherCAT, the eBIC of the top-level device is located in the CoE object directory 0x10E2:01 and the eBICs of the sub-devices follow in 0x10E2:nn.

6.3 Support and Service

Beckhoff and their partners around the world offer comprehensive support and service, making available fast and competent assistance with all questions related to Beckhoff products and system solutions.

Download finder

Our download finder contains all the files that we offer you for downloading. You will find application reports, technical documentation, technical drawings, configuration files and much more.

The downloads are available in various formats.

Beckhoff's branch offices and representatives

Please contact your Beckhoff branch office or representative for local support and service on Beckhoff products!

The addresses of Beckhoff's branch offices and representatives round the world can be found on our internet page: www.beckhoff.com

You will also find further documentation for Beckhoff components there.

Beckhoff Support

Support offers you comprehensive technical assistance, helping you not only with the application of individual Beckhoff products, but also with other, wide-ranging services:

- support
- design, programming and commissioning of complex automation systems
- and extensive training program for Beckhoff system components

Hotline:	+49 5246 963-157
e-mail:	support@beckhoff.com

Beckhoff Service

The Beckhoff Service Center supports you in all matters of after-sales service:

- on-site service
- repair service
- spare parts service
- hotline service

Hotline:	+49 5246 963-460
e-mail:	service@beckhoff.com
