| 1.1 | Corrected GPIO interface (P1615) |

2 Notes on the documentation

This description is intended exclusively for trained specialists in control and automation technology who are familiar with the applicable national standards.

For installation and commissioning of the components, it is absolutely necessary to observe the documentation and the following notes and explanations.

It is the duty of the responsible staff to use the documentation published at the respective time of each installation and commissioning.

The responsible staff must ensure that the application or use of the products described satisfy all the requirements for safety, including all the relevant laws, regulations, guidelines and standards.

Origin of the document

This documentation was originally written in German. All other languages are derived from the German original.

Disclaimer

The documentation has been prepared with care. The products described are, however, constantly under development.

We reserve the right to revise and change the documentation at any time and without notice.

No claims for the modification of products that have already been supplied may be made on the basis of the data, diagrams, and descriptions in this documentation.

Trademarks

Beckhoff®, TwinCAT®, EtherCAT®, EtherCAT G®, EtherCAT G10®, EtherCAT P®, Safety over EtherCAT®, TwinSAFE®, XFC®, XTS® and XPlanar® are registered and licensed trademarks of Beckhoff Automation GmbH.

Other designations used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owners.

Patents

The EtherCAT Technology is covered, including but not limited to the following patent applications and patents:

EP1590927, EP1789857, EP1456722, EP2137893, DE102015105702

and similar applications and registrations in several other countries.

EtherCAT. 

EtherCAT® is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany

The distribution and reproduction of this document as well as the use and communication of its contents without express authorization are prohibited.

Offenders will be held liable for the payment of damages. All rights reserved in the event of the grant of a patent, utility model or design.

3 Safety instructions

Safety regulations

Please observe the following safety instructions and explanations!
 Product-specific safety instructions can be found on following pages or in the mounting, wiring, commissioning areas, etc.

Exclusion of liability

All of the components are supplied in specific hardware and software configurations depending on the application requirements. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of Beckhoff Automation GmbH & Co. KG.

Personnel qualification

This description is only intended for trained specialists in control, automation, and drive technology who are familiar with the applicable national standards.

Description of symbols

In this documentation the following symbols are used with an accompanying safety instruction or note. The safety instructions must be read carefully and followed without fail!

| |
|--|
| ⚠ DANGER |
| <p>Serious risk of injury!</p> <p>Failure to follow the safety instructions associated with this symbol directly endangers human life and health!</p> |

| |

| NOTICE |
| <p>Damage to the environment or devices</p> <p>Failure to follow the instructions associated with this symbol can lead to damage to the environment or equipment.</p> |

● Tip or pointer
i This symbol indicates information that contributes to better understanding.

●
i This symbol indicates important information regarding UL approval.

Intended use

The CB1076 Computer Board was designed and developed exclusively for configuration in automation processes. To that end the board is equipped with external interfaces in order to acquire or output digital or analog signals or forward them to higher-level components.

The specified limits for electrical and technical data must be adhered to.

Any other use is regarded as inappropriate.

4 Overview

4.1 Properties

The CB1076 is an industrial motherboard in the ATX form factor. It is based on Intel®'s latest hybrid technology. Intel® processors of the 12th and 13th generation (Core™, Celeron™ and Pentium) are installed. The Intel® R680E-PCH chipset is used.

This new hybrid design has a combination of performance and efficiency cores. Up to 24 kB are available. It can be equipped with up to 128 GB of memory via four SO-DIMM slots. A maximum clock rate of up to 5600 MHz is possible.

The large number of internal and external connections make the CB1076 a very versatile motherboard:

- 14x USB interfaces, including 7x USB3.1 Gen2, 1x USB-C, 6x USB2.0
- 1x LAN connection 1 Gb
- 2x LAN connections 2.5 Gb
- DVI/HDMI and DisplayPort connection
- 1x M.2 Key M (SATA/NVME)
- 1x PCIe x16 slot
- 2x serial interfaces, 1x external, 1x onboard
- 2x PCIe x1
- 4x PCIe x4
- 6x SATA ports 6G onboard

The board provides basic safety functions via the integrated Trusted Platform Module (TPM) as a Trusted Computing Platform.

5 Notes on information security

The products of Beckhoff Automation GmbH & Co. KG (Beckhoff), insofar as they can be accessed online, are equipped with security functions that support the secure operation of plants, systems, machines and networks. Despite the security functions, the creation, implementation and constant updating of a holistic security concept for the operation are necessary to protect the respective plant, system, machine and networks against cyber threats. The products sold by Beckhoff are only part of the overall security concept. The customer is responsible for preventing unauthorized access by third parties to its equipment, systems, machines and networks. The latter should be connected to the corporate network or the Internet only if appropriate protective measures have been set up.

In addition, the recommendations from Beckhoff regarding appropriate protective measures should be observed. Further information regarding information security and industrial security can be found in our <https://www.beckhoff.com/secguide>.

Beckhoff products and solutions undergo continuous further development. This also applies to security functions. In light of this continuous further development, Beckhoff expressly recommends that the products are kept up to date at all times and that updates are installed for the products once they have been made available. Using outdated or unsupported product versions can increase the risk of cyber threats.

To stay informed about information security for Beckhoff products, subscribe to the RSS feed at <https://www.beckhoff.com/secinfo>.

6 Interfaces

6.1 Interface overview

The figures show the interfaces of the CB1076 board in a top view. The table shows the function of the respective interface as well as a reference to the manual page for further information. The listing is clockwise, starting with P1304 USB-C

Fig. 2: CB1076 interfaces

| Number | Function (designation) | Page |
|--------------|------------------------------------|---|
| P1304 | USB-C | USB-C Port (P1304) [► 15] |
| P501 | 4-pin connector (FAN) | FAN 1 – 5 (P500/1/2/3/4) [► 16] |
| P1602 | 2x5-pin connector (USB2.0) | USB 2.0 (P1602/P1609/P1611) [► 17] |
| P1601 | 2x5-pin connector (COM2) | Serial interfaces COM2 (P1601) [► 18] |
| P1305 | 5-pin connector (programming port) | Programming port (P1305) [► 19] |

6.3 FAN 1 – 5 (P500/1/2/3/4)

The module has five 4-pin fan connections, with which you can connect fans with a supply voltage of 12 V directly to the module. The connections FAN1, FAN2 and FAN3 have a speed monitoring function. The connected fan must supply a corresponding tachometer signal if this is to be used.

Fig. 4: CB1076 FAN 1-5

| Pin assignment FAN 1 (P500) | | | |
|-----------------------------|-----|-------|------------------------|
| P500 | Pin | Name | Description |
| | 1 | FANON | Ground switched fan 1 |

| | 1 | FANON | Ground switched fan 5 |
| | 2 | 12 V | 12 V |
| | 3 | N/C | |
| | 4 | PWM1 | Fan 1 power management |

Parallel assignment for FAN1/5 and FAN 3/4

These connectors are supplied in parallel via the PWM signal.

6.4 USB 2.0 (P1602/P1609/P1611)

Six USB signals are made available via these three 2x5-pin connectors.

The signals comply with USB specification 2.0.

All necessary settings for USB can be made by the BIOS. Note that the "USB mouse and keyboard" function in the BIOS setup is only required if the operating system does not offer USB support. This function should not be selected for settings in the setup and for booting Windows with a USB mouse and keyboard connected, because this would lead to considerable performance limitations.

The individual USB interfaces can supply a current of up to 500 mA and are electronically protected.

Fig. 5: CB1076 USB 2.0 internal

| Pin assignment internal USB 2.0 connector: | | | | | |
|--|------|-----|----|------|------------------------|

| Ground | GND | 4 | 9 | GND | Ground |
| Not connected | N/C | 5 | 10 | N/C | Not connected |

6.5 Serial interfaces COM2 (P1601)

An additional serial interface COM2 is installed on the board in a 2x5-pin connector. The signals correspond to the RS232 standard.

The port address and the interrupt used are set with the help of the BIOS setup.

2x5-pin connector:

Fig. 6: CB1076 COM 2

| Pin assignment COM connector | | | | | |
|------------------------------|------|-----|----|------|--------------------|
| Description | Name | Pin | | Name | Description |
| Data Carrier Detect- | DCD# | 1 | 2 | DSR# | Data Set Ready- |

| Data Terminal Ready- | DTR# | 7 | 8 | RI# | Ring Indicator- |
| Ground | GND | 9 | 10 | VCC | Supply voltage 5 V |

6.6 Programming port (P1305)

You can transfer programming signals to the board via this 5-pin connection. The supply voltage is 3.3 V.

Fig. 7: CB1076 Programming port

| Pin assignment programming port | | |
|---------------------------------|------------|----------------------|
| Pin | Signal | Description |
| 1 | 3.3 V | Supply voltage 3.3 V |
| 2 | EEP-SMBCLK | SMB-Clock |
| 3 | EEP-SMBDAT | SMB Data |
| 4 | PMCALERT# | PMC Alert- |
| 5 | GND | Ground |

6.7 Battery (BT1700/P1701)

The board is supplied with a CR2032 battery holder (BT1700) including a 3 V battery, but can also be connected to an external battery via a two-pin housing connector (P1701) in order to keep the integrated clock supplied in case of a power failure.

Fig. 8: CB1076 Battery

| Pin assignment RTC battery connector | | |
|--------------------------------------|------|-----------------------|
| Pin | Name | Description |
| 1 | BATT | 3.3 V battery voltage |
| 2 | GND | Ground |

6.8 Memory (U600, U700, U601, U701)

Four vertical SO-DIMM memory slots, DDR5- 5600 MT/s, max. 128 GB RAM are installed on the CB1076 board. For technical and mechanical reasons, it is possible that certain memory modules cannot be used. Information regarding the recommended memory modules can be obtained from your distributor.

NOTICE

Memory modules

When populating the memory sockets, make sure that you use identical memory modules.

All timing parameters for the different makes and versions are automatically set by the BIOS.

6.9 Power supply (P1614/P1616)

The connection for the power supply is implemented as a 2x12-pin standard ATX socket ("ATX24"). This is supplemented by a 2x4-pin housing socket via which the CORE-IN voltage must be provided.

Fig. 10: CB1076 2x12-pin ATX Power

6.10 SATA (P1603 – P1608)

Six SATA sockets are available for the connection of SATA devices. All SATA channels support the speed modes 1.5 Gbit/s, 3 Gbit/s and 6 Gbit/s.

Fig. 12: CB1076 SATA sockets

| Pin assignment SATA sockets | | |
|-----------------------------|---------|-----------------|
| Pin | Name | Description |
| 1 | GND | Ground |
| 2 | SATATX | SATA Transmit + |
| 3 | SATATX# | SATA Transmit - |
| 4 | GND | Ground |
| 5 | SATARX# | SATA Receive - |
| 6 | SATARX | SATA Receive + |
| 7 | GND | Ground |

6.11 System Port (P1610)

The board has a 2x13-pin standard pin contact strip for piercing connection with a spacing of 2.54 mm, via which the signals for power button, speaker, reset and various status LEDs are provided. This connector is coded for Beckhoff.

Fig. 13: CB1076 System Port

System Port 2

The board is prepared for an additional 2x9-pin System Port (P1612) and can be fitted with it.

6.12 M.2 Key-M (P1700)

The CB1076 is equipped with an M.2 Key-M socket. PCIe® signals are led out via these sockets. NVMe™ cards (M.2-2280) can be operated. RAID 0, 1 and 5 are supported.

Fig. 14: CB1076 M.2M P1700

| Pin assignment M.2 Key-M (P1700): | | | | | |
|-----------------------------------|-----------------|-----|----|-----------------------------|-------------------------------|

| 8 | SSTX- | SuperSpeed Transmitter - |
| 9 | SSTX+ | SuperSpeed Transmitter + |

6.14 GPIO (P1615)

The board has a general purpose input/output interface that feeds the signals out via a 2x10-pin connector. By programming the associated chip accordingly, I/O functions can be created here in a very flexible manner. Ask your distributor about appropriate software support.

Fig. 16: CB1076 GPIO-socket

| Pin assignment GPIO connector | | | | | |
|-------------------------------|-------|-----|----|------|--------------------|
| Description | Name | Pin | | Name | Description |

| Ground | GND | 10 | 20 | GND | Ground |

6.15 SMB/I²C (P1600)

The module can communicate with other switching elements via the SMBus or I²C protocol. The connections for this are realized in a 2x5-pin socket. The SMBus signals are processed by the chipset, the I²C signals by the SIO chip.

Fig. 17: CB1076 SMB-I2C socket

| Pin assignment SMB/I ² C connector | | | | | |
|---|-----------|-----|----|--------|---------------------------|

6.19 LAN 2.5 Gbit and USB 3.1Gen2 (P1402/P1401/P1400)

The USB socket and LAN socket are implemented as combined sockets, each providing two USB ports and one LAN port. In this way, six USB channels and three LAN ports are led out with all board variants.

All USB channels support the 3.1 Gen2 specification.

All necessary settings for USB can be made by the BIOS. Note that the "USB Mouse and Keyboard" functionality of the BIOS setup is only required if the operating system does not provide USB support. Do not select this function for settings in the setup and for booting Windows with a connected USB mouse and keyboard, because this would result in significant performance limitations.

The individual USB interfaces can supply a current of up to 900 mA and are electronically protected.

You can connect 10BaseT, 100BaseT, 1000BaseT and 2500BaseT-compatible network components to the P1401 A and P1402 A LAN ports. The required speed is selected automatically. TSN, Auto-Cross and Auto-Negotiate are available as well as PXE and RPL functionality. Controller is Intel® i219 for Lan1 1Gbit with WOL (P1400 A) and i226 for LAN2 and 3, 2.5Gbit (P1401 A and P1402 A).

Fig. 21: CB1076 LAN USB socket

i Real-time applications

The Ethernet port connected via PCIe is usually suitable for cycle times ≤ 1 ms and for distributed clock applications with EtherCAT.

The Ethernet port integrated in the chipset is usually suitable for real-time Ethernet applications with cycle times > 1 ms (without distributed clocks).

| Pin assignment USB3.1 Gen2 socket (P1400/P1401/P1402): | | |
|--|--------|---------------------------|
| Pin | Signal | Description |

| 9 | SSTX+ | Transmit line + (USB 3.1) |

6.20 DVI-D (P1500A/B)

The CB1076 has two DVI-D sockets in a combined component (Foxconn QH11121-DBDF-4F). You can connect digital DVI or HDMI displays to both sockets. Analog signals are not available on this connector. The CPU graphics support a maximum of three independent displays.

Fig. 22: CB1076 DVI-D socket

6.21 Serial interface COM1 (P1403)

The serial interface COM1 is led out via a 9-pin standard DSUB socket. The signals correspond to the RS232 standard.

You can set the port address and the interrupt used with the help of the BIOS setup.

Fig. 23: CB1076 COM1 socket

| Pin assignment COM1: | | | | | |
|----------------------|------|-----|---|------|-----------------|
| Description | Name | Pin | | Name | Description |
| Data Carrier Detect | DCD# | 1 | 6 | DSR# | Data Set Ready |

| Transmit Data | TXD | 3 | 8 | CTS# | Clear to Send |
| Data Terminal Ready | DTR# | 4 | 9 | RI# | Ring Indicator |
| Ground | GND | 5 | | | |

6.22 Display Port (P1501)

A corresponding standard socket (Foxconn 3VC11203-D7AB-4H) is available for devices with a DisplayPort connection.

The interface additionally provides HDMI/DVI signals that can be used with aid of an adapter. Please consult your distributor with regard to a suitable adapter.

7 BIOS

7.1 Using the setup

Within the individual setup pages the last saved settings can be restored can at any time with F2 ("Previous Values"). Use F3 ("Optimized Defaults") to load the factory defaults. Use F2/F3 to load the complete set of settings and F4 to save them ("Save & Reset").

A "▶" sign in front of the menu item indicates that a submenu is available. Use the arrow keys to navigate between menu items. Use the Enter key to select menu items and call submenus or selection dialogs.

For each setup option a help text is displayed at the top right, which in many cases contains useful information about the option and permitted values, etc.

i Note on Setup Documentation

The BIOS is regularly updated so that the available setup options can change at any time without notice. This may result in differences between the options actually available and those described below. It should also be noted that the settings shown in the setup menus below are not necessarily the recommended or default settings. Which settings must be selected depends on the application scenario in which the board is operated.

9 Technical data

9.1 Electrical data

| Power supply | |
|---------------------|---|
| Board | 24 VDC power supply (+20 % / - 15 %) |
| RTC | ≥3 A |
| Power | |
| Transformer | 95 W continuous load 150 W peak load |
| Current consumption | |
| RTC | ≤ 10 μm |

9.2 Environmental conditions

| Temperature range | |
|---------------------|---|
| Operating | 0 °C to +60 °C (extended temperature range on request) |
| Storage | -25 °C ... +85 °C |
| Shipping | -25 °C ... +85 °C, for packed boards |
| Temperature changes | |
| Operating | 0.5 °C per minute, 7.5 °C in 30 minutes |
| Storage | 1.0 °C per minute |
| Shipping | 1.0 °C per minute, for packed boards |
| Relative humidity | |
| Operating | 5 % ... 85 % (non-condensing) |
| Storage | 5 % ... 95 % (non-condensing) |
| Shipping | 5 % ... 100 % (non-condensing), for packed boards |
| Impact | |
| Operating | 150 m/s ² , 6 ms |
| Storage | 400 m/s ² , 6 ms |
| Shipping | 400 m/s ² , 6 ms, for packed boards |
| Vibration | |
| Operating | 10 ... 58 Hz, amplitude 0.075 mm |
| Storage | 5 to 9 Hz, 3.5 mm amplitude 9 to 500 Hz, 10 m/s ² |
| Shipping | 5 ... 9 Hz, 3.5 mm amplitude 9 ... 500 Hz, 10 m/s ² , for packed boards |

i Note on impact and vibration resistance

The specifications for impact and vibration resistance refer only to the motherboard itself without heat sink, memory module, cabling, etc.

9.3 Technical specifications

The board is specified for an ambient temperature range of 0 °C to +60 °C (extended temperature range on request). In addition, care must be taken that the temperature of the processor die does not exceed 100 °C. To ensure this a suitable cooling concept must be implemented that is oriented to the maximum power consumption of the processor/chipset. It must also be ensured that any existing controllers are included in the cooling concept. The power consumption of these function blocks may be of the same order of magnitude as the power consumption of the processor. The board is prepared with suitable holes for the use of modern cooling solutions. We have a series of compatible cooling components in our range. Your distributor will be pleased to assist you in selecting suitable solutions.

NOTICE

Prevent the maximum die temperature being exceeded!

It is the end customer's responsibility to ensure that the die temperature of the processor does not exceed 100 °C! Continuous overheating can destroy the board!

If the temperature exceeds 100 °C, the ambient temperature needs to be reduced. Ensure sufficient air circulation if necessary.

10 Appendix I: Post Codes

During the boot phase, the BIOS generates a series of status messages (so-called "POST Codes"), which can be output with the help of a suitable reading device (POST Code card). The meanings of the POST Codes are explained in the document "Aptio™ 5.x Status Codes" from American Megatrends®, which is available from the website <http://www.ami.com>. In addition, the following OEM POST Codes are output:

| Code | Description |
|------|--------------------------|
| 87h | BIOS-API started |
| 88h | PCA9535 started |
| 89h | PWRCTRL firmware started |

11 Appendix II: Resources

11.1 Interrupt

The resources used depend on the setup setting. The listed interrupts and their use are given by the AT compatibility. If interrupts are to be available only on the ISA side, they must be reserved by the BIOS setup. Exclusivity on the PCI side is neither given nor possible.

11.2 PCI-Devices

The PCI devices listed here all exist on the board, including those that are detected and configured by the BIOS. Due to the BIOS setup settings it may be the case that various PCI devices or functions of devices are not activated. If devices are disabled, the bus numbers of other devices may change as a result.

| Bus | Dev. | Fct. | Controller / Slot |
|-----|------|------|---|
| 00 | 00 | 00 | Host Bridge ID 3E30 |
| 00 | 01 | 00 | PCI-to- PCI Bridge ID1901 |
| 00 | 01 | 01 | PCI-to- PCI Bridge ID1905 |
| 00 | 01 | 02 | PCI-to- PCI Bridge ID1909 |
| 00 | 02 | 00 | VGA Controller ID3E98 |
| 00 | 08 | 00 | System Device ID1911 |
| 00 | 12 | 00 | Data Acquisition/Signal Processing Controller ID A379 |
| 00 | 14 | 00 | XHCI USB Controller ID A36D |
| 00 | 14 | 02 | RAM Controller ID A36F |
| 00 | 16 | 00 | Communication Device ID A360 |
| 00 | 16 | 03 | Serial Device ID A363 |
| 00 | 17 | 00 | RAID Controller ID 2822 |
| 00 | 1D | 00 | PCI-to-PCI Bridge ID A330 |
| 00 | 1D | 04 | PCI-to-PCI Bridge ID A334 |
| 00 | 1F | 02 | ISA Bridge ID A306 |
| 00 | 1F | 03 | HD Audio Device ID A348 |
| 00 | 1F | 04 | SMBus Controller ID A323 |
| 00 | 1F | 05 | Controller ID A324 |
| 00 | 1F | 06 | Ethernet Controller ID 15BB |
| 01 | 00 | 00 | Ethernet Controller (PCIE) ID 1533 |
| 02 | 00 | 00 | Ethernet Controller (PCIE) ID 1533 |
| 03 | 00 | 00 | Ethernet Controller (PCIE) ID 1533 |

11.3 SMB-Devices

The following table lists the reserved SM-Bus device addresses in 8-bit notation.

NOTICE

These address ranges may not be used by external devices even if the component assigned in the table doesn't exist on the motherboard.

| Address | Function |
|---------|--|
| 34-35 | API access to power supply |
| 36-39 | Reserved |
| 5C-5D | NCT7491 |
| 60-6F | Reserved for DDR4 |
| 70-73 | POST-Code Output |
| 88-89 | Slave address defined by BIOS |
| A0-A7 | Reserved for DDR4 |
| B0-B3 | Power controller (access via BIOS-API) |
| B8-BB | Power controller (access via BIOS-API) |

12 Support and Service

Beckhoff and their partners around the world offer comprehensive support and service, making available fast and competent assistance with all questions related to Beckhoff products and system solutions.

Download finder

Our [download finder](#) contains all the files that we offer you for downloading. You will find application reports, technical documentation, technical drawings, configuration files and much more.

The downloads are available in various formats.

Beckhoff's branch offices and representatives

Please contact your Beckhoff branch office or representative for [local support and service](#) on Beckhoff products!

The addresses of Beckhoff's branch offices and representatives round the world can be found on our internet page: www.beckhoff.com

You will also find further documentation for Beckhoff components there.

Beckhoff Support

Support offers you comprehensive technical assistance, helping you not only with the application of individual Beckhoff products, but also with other, wide-ranging services:

- support
- design, programming and commissioning of complex automation systems
- and extensive training program for Beckhoff system components

Hotline: +49 5246 963-157
e-mail: support@beckhoff.com

Beckhoff Service

The Beckhoff Service Center supports you in all matters of after-sales service:

- on-site service
- repair service
- spare parts service
- hotline service

Hotline: +49 5246 963-460
e-mail: service@beckhoff.com
