0.4	Cross-references and dimensional drawings added
0.5	Support and service page updated
1.0	First release, USB3.2, LAN controller i226-IT added, BIOS 0.48

As registered or unregistered trademarks, all company names and product designations mentioned in this manual are the property of the respective owner and as such are protected by national and international trademark laws.

## 2 Notes on the documentation

This description is intended exclusively for trained specialists in control and automation technology who are familiar with the applicable national standards.

For installation and commissioning of the components, it is absolutely necessary to comply with the documentation and the following notes and explanations.

It is the duty of the responsible staff to use the documentation published at the respective time of each installation and commissioning.

The responsible staff must ensure that the application or use of the products described satisfies all safety requirements, including all the relevant laws, regulations, guidelines, and standards.

### Origin of the document

This documentation was originally written in German. All other languages are derived from the German original.

### Disclaimer

The documentation has been prepared with care. The products described are, however, constantly under development.

We reserve the right to revise and change the documentation at any time and without notice.

No claims to modify products that have already been supplied may be made on the basis of the data, diagrams, and descriptions in this documentation.

### Trademarks

Beckhoff®, TwinCAT®, TwinCAT/BSD®, TC/BSD®, EtherCAT®, EtherCAT G®, EtherCAT G10®, EtherCAT P®, Safety over EtherCAT®, TwinSAFE®, XFC®, XTS® and XPlanar® are registered and licensed trademarks of Beckhoff Automation GmbH.

Other designations used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owners.

### Patents

The EtherCAT Technology is covered by the following patent applications and patents, without this constituting an exhaustive list:

EP1590927, EP1789857, EP1456722, EP2137893, DE102015105702

and similar applications and registrations in several other countries.

**EtherCAT** 

EtherCAT® is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany

### Copyright

© Beckhoff Automation GmbH & Co. KG, Germany.

The distribution and reproduction of this document, as well as the use and communication of its contents without express authorization, are prohibited.

Offenders will be held liable for the payment of damages. All rights reserved in the event that a patent, utility model, or design are registered.

## 3 Safety instructions

### Safety regulations

Please observe the following safety instructions and explanations!  
Product-specific safety instructions can be found on following pages or in the mounting, wiring, commissioning areas, etc.

### Exclusion of liability

All of the components are supplied in specific hardware and software configurations depending on the application requirements. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of Beckhoff Automation GmbH & Co. KG.

### Personnel qualification

This description is only intended for trained specialists in control, automation, and drive technology who are familiar with the applicable national standards.

### Description of symbols

In this documentation the following symbols are used with an accompanying safety instruction or note. The safety instructions must be read carefully and followed without fail!

#### DANGER

##### Serious risk of injury!

Failure to follow the safety instructions associated with this symbol directly endangers human life and health!

#### WARNING

##### Risk of injury!

Failure to follow the safety instructions associated with this symbol endangers human life and health!

#### CAUTION

##### Personal injuries!

Failure to follow the safety instructions associated with this symbol can lead to physical injuries!

#### NOTICE

##### Damage to the environment or devices

Failure to follow the instructions associated with this symbol can lead to damage to the environment or equipment.

#### Tip or pointer

This symbol indicates information that contributes to better understanding.

This symbol indicates important information regarding UL approval.

### Intended use

The CB3072 Computer Board was designed and developed exclusively for configuration in automation processes. To that end the board is equipped with external and internal interfaces in order to acquire or output digital or analog signals or forward them to higher-level components.

Any other use is regarded as inappropriate.

The specified limits for electrical and technical data must be adhered to.

## 4 Notes on information security

The products of Beckhoff Automation GmbH & Co. KG (Beckhoff), insofar as they can be accessed online, are equipped with security functions that support the secure operation of plants, systems, machines and networks. Despite the security functions, the creation, implementation and constant updating of a holistic security concept for the operation are necessary to protect the respective plant, system, machine and networks against cyber threats. The products sold by Beckhoff are only part of the overall security concept. The customer is responsible for preventing unauthorized access by third parties to its equipment, systems, machines and networks. The latter should be connected to the corporate network or the Internet only if appropriate protective measures have been set up.

In addition, the recommendations from Beckhoff regarding appropriate protective measures should be observed. Further information regarding information security and industrial security can be found in our <https://www.beckhoff.com/secguide>.

Beckhoff products and solutions undergo continuous further development. This also applies to security functions. In light of this continuous further development, Beckhoff expressly recommends that the products are kept up to date at all times and that updates are installed for the products once they have been made available. Using outdated or unsupported product versions can increase the risk of cyber threats.

To stay informed about information security for Beckhoff products, subscribe to the RSS feed at <https://www.beckhoff.com/secinfo>.

# 5 Overview

## 5.1 Properties

The CB3072 is a highly complex 3.5-inch board. It is based on Intel®'s Tiger Lake-H processors of the Core™, Celeron™ family in connection with the RM590E chipset.

State-of-the-art, energy-saving DDR4 technology enables a memory extension of up to 64 GB (DDR4-3200) using SO-DIMM260. In addition to a PCI express bus, further peripheral devices are available, such as HDMI or DisplayPort via I-PEX, 4x SATA with up to 6 Gbit/s, DVI/HDMI, 11x USB (including 5x USB3.0), 1x 1Gbit-LAN, 1x 2.5Gbit-LAN, an external and an internal serial interface (RS232).

The input voltage is 5 V.

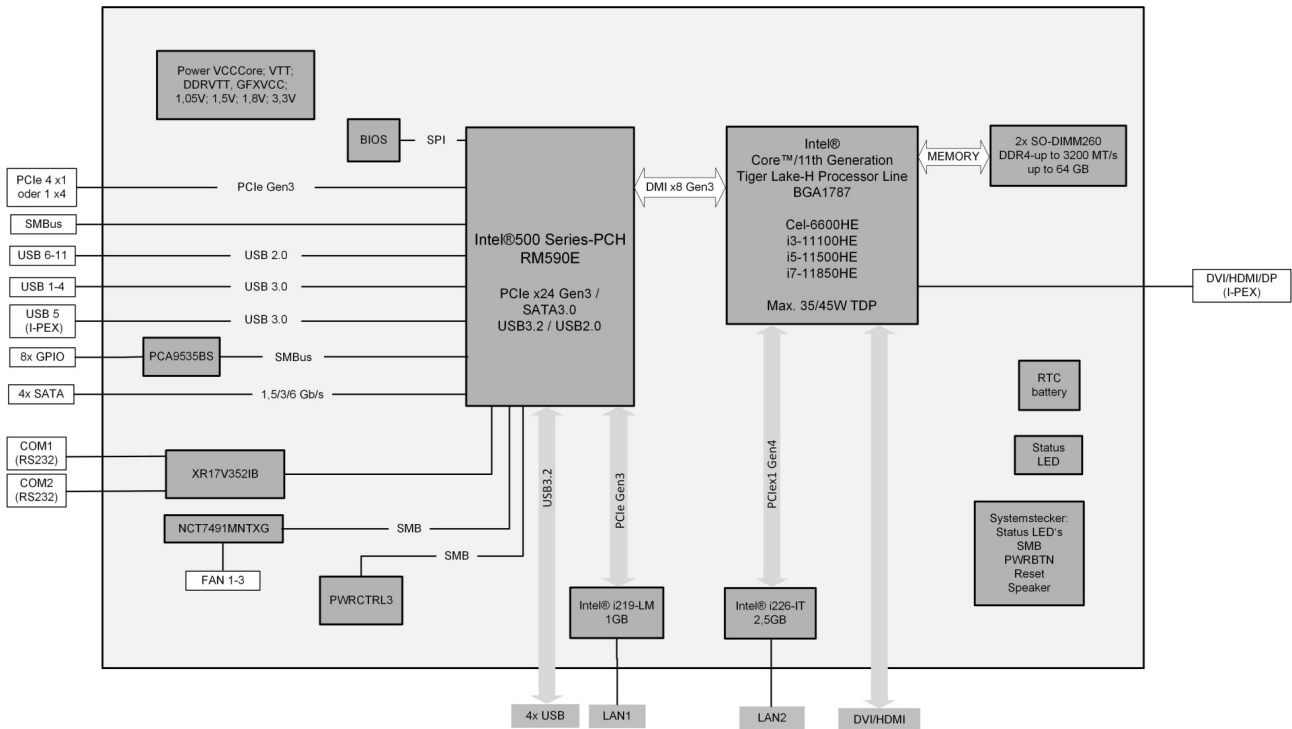

Fig. 1: Block diagram CB3072-TGL-H

## 5.2 List of features

<b>CB3072</b>	<b>3.5-inch board</b>
CPU	Intel® Celeron® Cel-6600HE Intel® Core™ i3-11100HE Intel®/Core™ i5-11500HE Intel®/Core™ i7-11850HE
Chipset	Intel® RM590E-PCH
Memory	2x SO-DIMM260 1.2 V DDR4-3200 Maximum memory capacity 64 GB
I/O external	1x DVI-D (DVI or HDMI 1.4) 1x LAN 1Gbit, Intel® i219 1x LAN 2.5Gbit Intel® i226 4x USB3.2 1 x COM A (RS232)
I/O internal	1x I-PEX (HDMI1.4 or DP1.2 and USB3.0) 4x SATA 3.0, RAID 0/1/5/10 1x PCIe Gen3 (1x PCIe x4 or 4x PCIe x1) 6x USB2.0 8x GPIO 1x COM B (RS232)
Graphic resolution	DisplayPort: 4096x2304@60 Hz HDMI1.4: 4096x2304@60 Hz 4096x2160@24 Hz DVI: 1920x1200@60 Hz
RTC	External CMOS battery
BIOS	AMI® Aptio V
Power supply	5 V/S5 V/3.3 V/12 V
Format	102 x 147 mm

### ● Availability of the processors

**i** The list of features lists all the processors that can be ordered. Their actual availability depends on the manufacturer.

## 5.3 Specification and documents

The following documents, specifications, or webpages, in their current or most recent versions, have been used in the preparation of this manual or as additional technical documentation.

## 6 Interfaces

All the interfaces on the CB3072 are described on the following pages.

---

● **Requirement for the cabling!**

**i**

The cables used must meet certain requirements for most interfaces. For example, twisted and shielded cables are necessary for a reliable USB 2.0 connection. Limitations in the maximum cable length are also no rarity. All of these interface-specific requirements can be found in the respective specifications and you should observe them accordingly.

---

## 6.1 Interface overview

The figure below shows the plug connections on the component side of the CB3072 board. The table below shows the function of the respective plug. The listed page in the manual provides you with further information on this connection. The interfaces are described clockwise, beginning with the Power Input (P1300).

Fig. 2: CB3072 interfaces

Number	Function (designation)	Page
P1300	Power Input	See: <a href="#">Power input (P1300)</a> [▶ 15]
P500/1/2/3	SATA interfaces	See: <a href="#">SATA interfaces (P500/1/2/3)</a> [▶ 16]

P1100	PCIe x4	See: <a href="#">PCI express connector (P1100)</a> [▶ 30]

## 6.2 Power input (P1300)

The connection for the power supply of the CB3072 is implemented as a 2x10-pin housing connector.

The 12 V supply is required for the operation of PCI express cards and the fan connections. COM RXD and TXD can also be used for your own power supply unit, e.g. for the UPS function.

Communication takes place via SMBus (SMB-CLK/SMB-DAT).

Fig. 3: CB3072 Power Input (P1300)

Pin assignment Power Input					
Description	Name	Pin		Name	Description
SMBus clock signal/ COM transmit data	SMB_CLK COM.TXD	1	11	SMB_DAT/ COM.RXD	SMBus data/ COM receive data
'Power Supply On' - Input for switching on the output voltages: Low(0 V) = switch on voltages High(5 V or open (contact) = switch off voltages	PS_ON	2	12	ATX PWRGOOD	'ATX Powergood' - output reports to the PC that all voltages are switched on: Low(0 V) = voltage not ok Open Drain = voltage ok
Power button output for switching the connected PC on and off	ATX PWRBTN#	3	13	SVCC	Supply voltage 5 V
Supply voltage 12 V	12 V	4	14	12 V	Supply voltage 12 V
Ground	GND	5	15	GND	Ground
Ground	GND	6	16	GND	Ground
Supply voltage 5 V	VCC	7	17	VCC	Supply voltage 5 V
Supply voltage 5 V	VCC	8	18	VCC	Supply voltage 5 V
S UPS active output: Low (0 V) = S UPS inactive High (3.3 V) = S UPS active	S UPS	9	19	GND	Ground
Supply voltage 3.3 V	3.3 V	10	20	3.3 V	Supply voltage 3.3 V

### 6.3 SATA interfaces (P500/1/2/3)

The CB3072 board is equipped with four SATA interfaces, which allow a data transfer rate of up to 6 Gbit per second. The interfaces are available as 7-pin standard SATA connectors. RAID 0/1/5/10 are supported.

The necessary settings are made via the BIOS setup.

Fig. 4: CB3072 SATA (P500/1/2/3)

Pin assignment SATA interfaces (P500 – P503)		
Pin	Name	Description
1	GND	Ground
2	SATATX	SATA Transmit +
3	SATATX#	SATA Transmit -
4	GND	Ground
5	SATARX#	SATA Receive -
6	SATARX	SATA Receive +
7	GND	Ground

### 6.4 Serial interface COM2 internal (P1205)

The internal serial interface COM2 is implemented with a 2x5-pin connector. The signals are available according to the RS232 standard.

Fig. 5: CB3072 COM2 internal (P1205)

Pin assignment COM2 internal					
Description	Name	Pin		Name	Description
Data Carrier Detect	DCD	1	6	DSR	Data Set Ready
Receive Data	RXD	2	7	RTS	Request to Send
Transmit Data	TXD	3	8	CTS	Clear to Send
Data Terminal Ready	DTR	4	9	RI	Ring Indicator
Ground	GND	5	10	S3.3V	Supply voltage 3.3 V

## 6.5 Fan connections (P1101)

Three fans with a supply voltage of 12 V can be connected to the module. This takes place with a 2x5-pin connector. There are also signals for monitoring the fan speed.

Fig. 6: CB3072 fan (P1101)

Pin assignment fan connection					
Description	Name	Pin		Name	Description
Ground switched Fan 1	FANON1	1	6	FANON2	Ground switched Fan 2
Supply voltage 12 V	12 V	2	7	12 V	Supply voltage 12 V
Monitoring fan 1	FANCTRL1	3	8	FANCTRL2	Monitoring fan 2
Supply voltage 12 V	12 V	4	9	FANCTRL3	Monitoring fan 3
Ground switched Fan 3	FANON3	5	10	GND	Ground

## 6.6 GPIO (P504)

The board has a General Purpose Input/Output interface that is fed out via a 2x6-pin connector. By programming the associated chip (PCA9535BS) accordingly, I/O functions can be created here in a very flexible manner. Ask your distributor about appropriate software support.

Fig. 7: CB3072-GPIO (P504)

Pin assignment GPIO					
Description	Name	Pin		Name	Description
Supply voltage 5 V	VCC	1	7	VCC	Supply voltage 5 V
GP Input/Output1	GPIO0	2	8	GPIO4	GP Input/Output5
GP Input/Output2	GPIO1	3	9	GPIO5	GP Input/Output6
GP Input/Output3	GPIO2	4	10	GPIO6	GP Input/Output7
GP Input/Output4	GPIO3	5	11	GPIO7	GP Input/Output8
Ground	GND	6	12	GND	Ground

## 6.7 Display Port I-PEX (P1001)

The CB3072 has a further DVI connection, which is implemented in the form of a 30-pin ribbon cable connector. There are no analog VGA signals on this connection, but an HDMI or DisplayPort screen can be connected. In addition, a further USB channel is fed out via this connector. This USB channel supports the specification 3.0. It supplies up to 900 mA current and is electronically protected.

When cabling, be sure to connect receive cables with transmit cables and vice versa. The current drawn from VCC must not exceed 2 A in total (0.5 A per contact); for 3.3 V, the maximum current is 1 A (0.5 A per contact).

### NOTICE

#### Use I-PEX cable!

Use a special I-PEX cable for this interface.

Fig. 8: CB3072 Display Port I-PEX (P1001)

Pin assignment Display Port IPEX		
Pin	Name	Description
1	TMDS0#/DP2#	DVI Data 0 - / DP Lane 2 -

29	VCC	Supply voltage 5 V
30	VCC	Supply voltage 5 V

## 6.8 LAN 1 Gbit (P700) / LAN 2.5 Gbit (P800)

The board has three Gigabit-LAN connections. (10BaseT-, 100BaseT-, 1000BaseT and 2500BaseT - compatible network components can be connected. The required speed is selected automatically. Auto-Cross and Auto-Negotiate are available as well as PXE and RPL functionality. Controller is Intel®s i219 for LAN1 and i226 for LAN 2.

Fig. 9: CB3072-LAN (P700-800)

Pin assignment LAN socket i219 (P700)		
Pin	Name	Description
1	LAN10	LAN line 1 +
2	LAN10#	LAN line 1 -
3	LAN11	LAN line 2 +
4	LAN11#	LAN line 2 -
5	LAN12	LAN line 3 +

7	LAN23	LAN line 4 +
8	LAN23#	LAN line 4 -

The LEDs of the LAN interface (P700) indicate the activity and speed of the data transmission (Mbit/s). The left LED lights up when there is a connection and activity, and the right LED during data transmission:

Left LED Steadily lit when there is a connection, flashing during data transmission	Right LED Steadily lit during data transmission	Mbit/s
Green	Green	1000
Green	Orange	100
Green	Off	10

The LEDs of the LAN interface (P800) indicate the activity and speed of the data transmission (Mbit/s). The left LED lights up when there is a connection and activity, and the right LED during data transmission:

Left LED Steadily lit when there is a connection, flashing during data transmission	Right LED Steadily lit during data transmission	Mbit/s
Green	Green	2500
Green	Orange	1000
Green	Off	100/10

### ● Real-time applications

## i

The Ethernet port connected via PCIe is usually suitable for cycle times  $\leq 1$  ms and for distributed clock applications with EtherCAT.  
The Ethernet port integrated in the chipset is usually suitable for real-time Ethernet applications with cycle times  $> 1$  ms (without distributed clocks).

## 6.9 USB 3.2 external (P1201/P1203)

USB 3.2 channels 1 to 4 are fed out in the form of standard USB connectors.

The USB channels support the USB specification 3.x. All necessary settings for USB can be made by the BIOS.

### NOTICE

#### Functionality of USB mouse and keyboard

Note that the "USB Mouse and Keyboard" functionality of the BIOS setup is only required if the operating system does not provide USB support. Do not select this function for settings in the setup and for booting Windows with a connected USB mouse and keyboard, because this would result in significant performance limitations.

The individual USB interfaces can supply a current of up to 900 mA and are electronically protected.

Fig. 10: CB3072 USB3.0 (P1201+1203)

## 6.11 Serial interface COM1 (P1200)

The COM1 serial interface is fed out via a 9-pin standard DSUB connector (male). The signals are available according to the RS232 standard.

The port address and the interrupt used are set with the help of the BIOS setup.

Fig. 12: CB3072 COM1 (P1200)

Ground	GND	5			

## 6.12 Memory SO-DIMM260 (U601/U600)

On the CB3072 board there are two SO-DIMM260 memory slots for DDR4-3200 RAM. For technical and mechanical reasons, it is possible that certain memory modules cannot be used. Information regarding the recommended memory modules can be obtained from your distributor.

With two slots, a memory extension up to 64 GB is possible with currently available modules. When populating both memory slots, make sure that you use identical memory modules.

All timing parameters for the different makes and versions are automatically set by the BIOS.

## 6.13 USB 2.0 internal (P1202/P1204)

USB channels 6 to 11 are provided via two connectors.

Channels 6 to 9 are fed out via a 2x8-pin connector, channels 10 and 11 via a 2x4-pin connector.

The USB channels support the USB specification 2.0. All necessary settings for USB can be made by the BIOS. Note that the "USB mouse and keyboard" function in the BIOS setup is only required if the operating system does not offer USB support. This function should not be selected for settings in the setup and for booting Windows with a USB mouse and keyboard connected, because this would lead to considerable performance limitations.

The individual USB interfaces can supply a current of up to 500 mA and are electronically protected.

Fig. 14: CB3072 USB2.0 (P1202)

## 6.14 System connector (P1102)

A 2x12-pin connector is used for the connection of signals that are typical of the system. Power button, reset, speaker, LEDs for hard disk and for Suspend mode are connected here along with three further status LEDs that are controlled via GPIOs. Of these three LEDs, LED1 and LED2 are already equipped with series resistors. The pin assignment is designed so that associated pins are located opposite or near to each other.

Fig. 16: CB3072 system (P1102)

## 6.15 PCI express connector (P1100)

The CB3072 is equipped with a vendor-specific 2x40-pin connector, via which PCI express devices can be connected. Either up to four PCIe1x devices or precisely one PCIe x4 device can be connected. Adapter cards with standard PCIe slots as well as with PCIe Mini-Card connectors are available as accessories. Please contact your distributor for this.

## 7 BIOS

### 7.1 Using the setup

Within the individual setup pages the last saved settings can be restored can at any time with F2 ("Previous Values"). Use F3 ("Optimized Defaults") to load the factory defaults. Use F2/F3 to load the complete set of settings and F4 to save them ("Save & Reset").

A "▶" sign in front of the menu item indicates that a submenu is available. Use the arrow keys to navigate between menu items. Use the Enter key to select menu items and call submenus or selection dialogs.

For each setup option a help text is displayed at the top right, which in many cases contains useful information about the option and permitted values, etc.

BIOS entry	Options
Save Changes and Reset	
Discard Changes and Reset	Press enter key
Restore Optimized Defaults	Press enter key
Boot Override	
Launch EFI Shell from filesystem device	Press enter key

## 7.8 BIOS update

The "DecdFlash" program and a bootable medium with the latest BIOS version are used if the BIOS needs to be updated. When doing this it is important to start the program from a DOS environment without a virtual memory manager such as "EMM386.EXE". If such a memory manager is loaded, the program will abort with an error message or cause a crash.

DecdFlash is a program for the automatic updating of the BIOS on all boards with AMI-BIOS. All files contained in the zip file must be unpacked into a directory, from where

```
DecdFlash Bios-Dateiname
```

calling takes place. The name of the BIOS file and its length are checked. The BIOS will now be programmed.

The system must not be interrupted during the flashing process, as otherwise the update will abort and the BIOS on the board will be destroyed. The Flash procedure takes about 75 seconds. The necessary firmware update takes place automatically.

NOTICE
<p><b>Risk of damage due to incorrect update procedure!</b></p> <p>If the BIOS update is performed incorrectly, the board may become unusable. Therefore a BIOS update should only be done if the corrections / additions that the new BIOS version brings with it are really needed.</p> <p>Before a planned BIOS update, it is essential to ensure that the BIOS file to be reloaded is really released for exactly this board and for exactly this board version. If an inappropriate file is used, the board will inevitably not boot afterwards.</p>

## 9 Technical data

### 9.1 Electrical data

Power supply	
Board	3.3 V, 5 V and 12 V ( $\pm 5\%$ )
RTC	$\geq 3\text{ V}$
Current consumption	
RTC	$\leq 10\ \mu\text{A}$

### 9.2 Environmental conditions

Temperature range	
Operating	0 °C ... +60 °C (extended temperature range on request)
Storage	-25 °C ... +85 °C
Shipping	-25 °C ... +85 °C, for packed boards

Temperature changes	
Operating	0.5 °C per minute, 7.5 °C in 30 minutes
Storage	1.0 °C per minute
Shipping	1.0 °C per minute, for packed boards

Relative humidity	
Operating	5% ... 85% (non-condensing)
Storage	5% ... 95% (non-condensing)
Shipping	5% ... 100% (non-condensing), for packed boards

Impact	
Operating	150 m/s <sup>2</sup> , 6 ms
Storage	400 m/s <sup>2</sup> , 6 ms
Shipping	400 m/s <sup>2</sup> , 6 ms, for packed boards

Vibration	
Operating	10 ... 58 Hz, amplitude 0.075 mm
Storage	5 to 9 Hz, 3.5 mm amplitude 9 to 500 Hz, 10 m/s <sup>2</sup>
Shipping	5 ... 9 Hz, 3.5 mm amplitude 9 ... 500 Hz, 10 m/s <sup>2</sup> , for packed boards

#### **i** Note on impact and vibration resistance

The specifications for impact and vibration resistance refer only to the motherboard itself without heat sink, memory module, cabling, etc.

## 9.3 Thermal specifications

The board is specified for an ambient temperature range from 0 °C ... +60 °C (extended temperature range on request). You must also ensure that the temperature of the processor die does not exceed 100 °C. To ensure this, a suitable cooling concept must be implemented that is oriented to the maximum power consumption of the processor/chipset. Please note that any existing controllers must be taken into account in the cooling concept. The power consumption of these function blocks may be of the same order of magnitude as the power consumption of the processor.

The board is prepared with holes for the use of suitable cooling solutions. We have a series of compatible cooling components in our range. Your distributor will be pleased to assist you in selecting suitable solutions.

### **NOTICE**

#### **Prevent the maximum die temperature being exceeded!**

It is the end customer's responsibility to ensure that the die temperature of the processor does not exceed 100 °C! Continuous overheating can destroy the board!

If the temperature exceeds 100 °C, the ambient temperature needs to be reduced. Ensure sufficient air circulation if necessary.

## 10 Support and Service

Beckhoff and their partners around the world offer comprehensive support and service, making available fast and competent assistance with all questions related to Beckhoff products and system solutions.

### Beckhoff's branch offices and representatives

Please contact your Beckhoff branch office or representative for [local support and service](#) on Beckhoff products!

The addresses of Beckhoff's branch offices and representatives round the world can be found on our internet page: [www.beckhoff.com](http://www.beckhoff.com)

You will also find further documentation for Beckhoff components there.

### Beckhoff Support

Support offers you comprehensive technical assistance, helping you not only with the application of individual Beckhoff products, but also with other, wide-ranging services:

- support
- design, programming and commissioning of complex automation systems
- and extensive training program for Beckhoff system components

Hotline: +49 5246 963-157  
e-mail: [support@beckhoff.com](mailto:support@beckhoff.com)

### Beckhoff Service

The Beckhoff Service Center supports you in all matters of after-sales service:

- on-site service
- repair service
- spare parts service
- hotline service

Hotline: +49 5246 963-460  
e-mail: [service@beckhoff.com](mailto:service@beckhoff.com)

### Beckhoff Headquarters

Beckhoff Automation GmbH & Co. KG

Huelshorstweg 20  
33415 Verl  
Germany

Phone: +49 5246 963-0  
e-mail: [info@beckhoff.com](mailto:info@beckhoff.com)  
web: [www.beckhoff.com](http://www.beckhoff.com)

## 11 Appendix I: Post Codes

During the boot phase, the BIOS generates a series of status messages (so-called "POST Codes"), which can be output with the help of a suitable reading device (POST Code card). The meanings of the POST Codes are explained in the document "Aptio™ 5.x Status Codes" from American Megatrends®, which is available from the website <http://www.ami.com>. In addition, the following OEM POST Codes are output:

Code	Description
87h	BIOS-API started
88h	PCA9535 started
89h	PWRCTRL firmware started

## 12 Appendix II: Resources

### 12.1 Interrupt CB3072

The system BIOS determines the interrupt requests (IRQs) for all devices that request interrupts. In the operating system, interrupts can be dynamically forwarded to IRQs and can support a reassignment of IRQs if there is a conflict with the current use of the interrupt.

Further information can be found in chipset manual: Specifications and documents

## 12.2 PCI-Devices CB3072

The PCI devices listed here all exist on the board, including those that are detected and configured by the BIOS. Due to the BIOS setup settings it may be the case that various PCI devices or functions of devices are not activated. If devices are disabled, the bus numbers of other devices may change as a result.

Bus	Dev.	Fct.	Controller / Slot
00	00	00	Host Bridge ID 3E35
00	02	00	VGA Controller ID 3EA0
00	04	00	Data Acquisition/Signal Processing Controller ID 1903
00	08	00	System Device ID 1911
00	12	00	Data Acquisition/Signal Processing Controller ID 9DF9
00	14	00	XHCI USB Controller ID 9DED
00	14	02	RAM Controller ID 9DEF
00	16	00	Communication Device ID 9DE0
00	17	00	RAID Controller ID 282A
00	1C	00	PCI-to-PCI Bridge (PCIE) ID 9DB8
00	1C	07	PCI-to-PCI Bridge (PCIE) ID 9DBF
00	1D	00	PCI-to-PCI Bridge (PCIE) ID 9DB0
00	1D	03	PCI-to-PCI Bridge (PCIE) ID 9DB3
00	1F	00	ISA Bridge ID 9D84
00	1F	03	HD Audio Device ID 9DC8
00	1F	04	SMBus Controller ID 9DA3
00	1F	05	Controller ID 9DA4
00	1F	06	Ethernet Controller ID 15BD
02	00	00	Ethernet Controller (PCIE) ID 1533
03	00	00	Mass Storage Controller (PCIE) ID 5008
04	00	00	Ethernet Controller (PCIE) ID 1533

## 12.3 SMB-Devices CB3072

The following table lists the reserved SM-Bus device addresses in 8-bit notation.

### **NOTICE**

These address ranges may not be used by external devices even if the component assigned in the table doesn't exist on the motherboard.

<b>Address</b>	<b>Function</b>
B0, B2, B8, BA	PWCTR3
70, 72	PostCode
34 (old B4)	CA2000-0021/23 (power supply unit)
40	PCA9535BS (16-bit I2C and SMBus, low power I/O port with interrupt)
..	S UPS
